

Report No. 454(55/1.0/2)

Household Consumer Expenditure in India 1999-2000

Key Results

**NSS 55th Round
(July 1999 – June 2000)**

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

December 2000

Preface

The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on Consumer Expenditure and Employment & Unemployment with a large sample usually once in five years. The sixth such survey was conducted in the 55th round (July 1999-June 2000) - which covered Non-agricultural Enterprises in the Informal Sector in addition. The schedule of enquiry on Consumer Expenditure for the survey was, more or less, similar to that adopted in previous quinquennial rounds.

The key results based on Consumer Expenditure Survey are presented in this report. It is based on two key tables giving average monthly per capita consumption expenditure estimates and distribution of persons and households by monthly per capita consumer expenditure (MPCE) class.

This report has four sections and one appendix. Section One of the report is introductory while Section Two presents Concepts and Definitions. Section Three gives Sample Design and Estimation Procedure. Survey findings are provided in Section Four while Appendix A contains the tables.

The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report.

I am grateful to the Chairman and members of the Governing Council, Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

Section One

Introduction

1.0 The NSS 55th round, conducted during July 1999 to June 2000 was an integrated survey of households and enterprises. The subjects covered were household consumer expenditure, employment-unemployment and informal non-agricultural enterprises (other than those engaged in industrial categories of 'mining & quarrying', electricity, gas and water supply). It was the sixth quinquennial survey on Consumer Expenditure and Employment-Unemployment. One important feature of this quinquennial survey was that schedules of Consumer Expenditure and Employment-Unemployment were canvassed in separate set of households unlike in earlier rounds.

1.1 **Geographical coverage:** The geographical coverage of the survey was the whole of Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavourable field conditions.

1.2 **Sub-round:** The survey period of one year was, as usual, divided into four sub-rounds of three months each as indicated below and equal number of sample villages and blocks were allotted to each sub-round.

| | | |
|-------------|---|-----------------------|
| Sub-round 1 | : | July-September 1999 |
| Sub-round 2 | : | October-December 1999 |
| Sub-round 3 | : | January-March 2000 |
| Sub-round 4 | : | April-June 2000 |

The term Semi-round used in this report means half of the survey round. Thus sub-round 1 and 2 constitute semi-round 1 and sub-round 3 and 4 constitute semi-round 2.

1.3 **Sample Design:** The sample design adopted in the survey was a two stage stratified design. The first stage units were 1991 census villages (panchayat wards for Kerala) for rural sector and Urban Frame Survey (UFS) blocks for urban sector. The second stage units were households both for consumer expenditure and employment-unemployment surveys.

1.4 **Sample size:** A total of 10,384 first stage units (villages/blocks) were selected for the entire survey in the 55th round and 10162 villages/blocks were surveyed as per the details given below:

| Item | Rural | Urban | Total |
|---|--------------|--------------|--------------|
| 1. No. of villages/blocks surveyed | 6046 | 4116 | 10162 |
| 2. No. of households surveyed for Consumer Expenditure | 71386 | 48924 | 120310 |
| 3. No. of persons in the households surveyed for Consumer Expenditure | 374857 | 225160 | 600017 |

Number of FSUs allotted and surveyed, number of households surveyed along with their number of persons for each State, UT and all-India were given in Statement T₀ of Section Three.

From each selected village or block, 12 households were selected for consumer expenditure survey in 55th round. It may be mentioned that in earlier quinquennial rounds only 10 households per sample village/block were surveyed though the number of first stage units (villages and blocks) surveyed were more. For instance, the number of first stage units allotted during 50th round was 14199.

1.5 Change in coverage of items over earlier rounds : For the first time, consumption expenditure on second-hand clothing and second-hand durable goods was included in the consumption of households. In this round, the wages paid in cash to domestic servant or cook who was classified as a member of the household by definition, were also included in the consumption expenditure.

1.6 Contents of the Report: The report contains three sections and two appendices. It has been prepared on the basis of the tables generated on Schedule 1.0: Household Consumer Expenditure. Section One gives Introduction, Section Two Concepts and Definitions and the details of Sample Design and Estimation procedures are provided in Section Three. Section Four highlights the Survey Findings. The report is based on mainly two tables giving distribution of persons and break-up of average MPCE by broad groups of items for different MPCE classes.

Section Two

Concepts and Definitions

2.0 The main concepts and definitions used in this report are given below.

2.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word ‘normally’ means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. ‘Living together’ is usually given more importance than ‘sharing food from a common kitchen’ in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered a single-member household except that a family living in a hotel (say) is considered to be one household only; the same applies to residential staff of such establishments.

2.2 **Adult:** A person who has completed 15 years of age.

2.3 **Household size:** The size of a household is the total number of persons in the household.

2.4 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely, (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

2.5 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt through gift, charity, borrowing; and (e) free collection. Home produce is evaluated at the ex farm or ex factory prices. For evaluating the consumption of the items of group (iii), i.e. items categorised as

miscellaneous goods and services and durable goods, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered to be consumption.

2.6 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests, whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance, etc., made by the household are not considered consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item ‘cooked meals’ is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty in estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and of guests and employees will also be recorded in the purchaser household.

2.7 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any nutritional studies relating to the nutritional status of households.

2.8 **Value of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory prices. Value of consumption out of gifts, loans, free collection and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.9 **Monthly per capita consumer expenditure (MPCE):** For a household, this is its 30 days’ total consumer expenditure divided by its size. A person’s MPCE is understood as that of the household to which he or she belongs.

2.10 **MPCE class:** The MPCE classes are normally revised during quinquennial rounds of Consumer Expenditure. Usually, 12 MPCE classes are formed from a table giving estimated cumulative percentage frequency distribution of persons by MPCE for each sector separately. These classes correspond broadly to 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% of population. The class limits are given below:

| Sl.No | Rural (in Rs) | Urban (in Rs) |
|--------------|----------------------|----------------------|
| 1 | 0 - 225 | 0- 300 |
| 2 | 225 - 255 | 300 - 350 |
| 3 | 255 - 300 | 350 - 425 |
| 4 | 300 - 340 | 425- 500 |
| 5 | 340 - 380 | 500 - 575 |
| 6 | 380 - 420 | 575 - 665 |
| 7 | 420 - 470 | 665 - 775 |
| 8 | 470 - 525 | 775- 915 |
| 9 | 525 - 615 | 915 - 1120 |
| 10 | 615 - 775 | 1120 - 1500 |
| 11 | 775 - 950 | 1500 - 1925 |
| 12 | 950+ | 1925+ |

2.11 Major States: The term will be used to denote the following States of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

2.12 Reference period: For collecting data on consumption, the adoption of a reference period always involves a difficult choice. A short reference period (such as one day) gives rise to unstable data as a household's consumption expenditure fluctuates from day to day. A long reference period, on the other hand, can introduce a good amount of recallth error into the data. The annual series of consumer expenditure surveys, up to the 49th round, used a uniform reference period of 'last 30 days' for all items of consumption. In the bigger surveys of the quinquennial series, an additional reference period of 'last 365 days' was used for some items of consumption – particularly, clothing, footwear and durable goods – but most results were tabulated using the 'last 30 days' data. During the 51st to 54th rounds, one-half of the sample of households was surveyed through schedule type I, which had a reference period of 30 days for all items. In the other half of the sample, a schedule (schedule type 2) with different reference periods for different items was tried out on an experimental basis. The reference periods for schedule type 2 were:

Food, pan tobacco and intoxicants: last 7 days

Fuel & light, miscellaneous goods &services, and medical (non-institutional): last 30 days

Educational, medical (institutional), clothing, footwear and durable goods : last 365 days.

During 55th round of NSS, information on consumption of food, pan, tobacco & intoxicants was collected independently for two different reference periods of 7 days and 30 days from the same households. However, the field staff was instructed to collect independently the data with "30 days" reference period before the data for the previous week i.e. "7 days" in consumer expenditure schedule (Sch.1.0).

Another important feature of this round was that information in respect of consumption of clothing, footwear, durable goods, education and medical (institutional) services was

collected only for one reference period of “last 365 days”. In some of the quinquennial rounds, information on these items was collected for two different reference periods - last 30 days and last 365 days - from the same households. The results of 50th or other earlier quinquennial rounds were, however, based on a reference period of 30 days only for all the items.

2.13 Milk and milk products: This group includes *ghee*, butter, curds, ice cream, etc. Milk-based sweetmeats (*pera*, *rosogolla*, etc.) come under ‘beverages, refreshments and processed food’ unless they are prepared from milk, sugar, etc., within the household. In the latter case, consumption of milk, sugar, etc., is accounted separately instead of as a single item under ‘milk products’.

2.14 Beverages, refreshments, etc. (including processed food): This includes all beverages including tea, coffee, cocoa, cold drinks and various commercially produced beverages, biscuits and confectionery, salted refreshments, sweets, pickles, sauce, jams and jellies, and also cooked meals obtained on payment (see paragraphs 2.0.5 and 2.0.6).

2.15 Clothing: This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and matting, cotton yarn, wool and knitting wool. It, however, **excludes** tailoring charges, which come under ‘miscellaneous goods and services’.

2.16 Miscellaneous goods and services: Items of consumption other than food and drink (and substances chewed and smoked), fuel, clothing and footwear, educational and medical goods and services, rent, taxes and durable goods.

2.17 Taxes and cesses: This term includes only taxes and cesses which are levied on the household as a domestic consumer. It includes consumer licence fees such as are paid for possession of firearms, etc. It excludes income tax.

2.18 Education: Apart from educational expenses proper such as school and college fees, private tuition charges, textbooks, etc., this group of items includes expenses on newspapers and magazines, fiction and stationery. Donations to school fund, however, are excluded.

2.19 Institutional and non-institutional medical expenses: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred for medical treatment undergone as an in-patient of a medical institution (such as a hospital or nursing home) or otherwise. Medical expenses include expenditure on medicines and medical goods including family planning appliances, payments made for medical treatment, and expenses incurred for clinical tests.

2.20 Durable goods: Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durables used for domestic purpose is included in ‘expenditure on durable goods’.

Section Three

Sample Design and Estimation Procedure

3.1 Sample Design

3.1.1 General: A stratified sampling design has been adopted for selection of the sample first-stage units (FSU's). The FSU's are villages (panchayat wards for Kerala) for rural areas and Urban Frame Survey (UFS) blocks for urban areas. The Ultimate stage units (USU's) are enterprises for schedule 2.0 and households for schedule 1.0/ 10/ 10.1, which are selected by the method of circular systematic sampling from the corresponding frame in the FSU. Large FSU's are subdivided into hamlet-groups (rural)/ sub-blocks (urban), that are grouped into two segments, and USU's are selected independently from each of these segments.

3.1.2 Sampling frame for first stage units: List of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks are respectively used for selection of rural and urban sample FSU's. For selection of sample villages from the State of Jammu & Kashmir, list of villages as per 1981 Census has been used as the sampling frame. It may be mentioned that all the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 km of a bus route and inaccessible villages of Andaman & Nicobar Islands are left out of the survey coverage of the NSS 55th round.

3.1.3 Stratification

3.1.3.1 Rural: Two special strata are formed at the **State/ UT level** viz.

Stratum1: all FSUs with population between 1 to 100, and
Stratum2: FSUs with population more than 15,000.

[Note: The above two strata are spread across a given state and are not confined to any particular administrative division within the state.]

Above strata of either type are formed if at least 50 such FSU's are there in the respective frames. Otherwise, they are merged with the general strata.

While forming general strata (consisting of FSU's other than those covered under strata 1 & 2), efforts have been made to treat each district as a separate stratum. If limitation of sample size does not allow forming so many strata, smaller districts within a particular NSS region are merged to form a

stratum. Each district with rural population of 2 millions or more as per 1991 Census (1.8 millions or more as per 1981 Census in case of Jammu & Kashmir) is as usual split into a number of strata.

3.1.3.2 Urban : Strata are formed within NSS Regions as follows:

| Stratum number | Composition of strata by considering population of various towns as per the 1991 Census |
|-----------------------|---|
| 1, 3, 5 * | 'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region) |
| 2, 4, 6 * | Other blocks of each single city with a population of 10 lakhs or more |
| 7 | HA or IA or BA blocks of all towns with population between 50,000 and less than 10 lakhs |
| 8 | Other blocks of all towns with population between 50,000 and less than 10 lakhs |
| 9 | HA or IA or BA blocks of all towns with population less than 50,000 |
| 10 | Other blocks of all towns with population less than 50,000 |

* Stratum numbers 3, 4, 5 & 6 remain void if there is only one city in an NSS region with a population of 10 lakhs or more.

If limitation of sample size does not allow forming so many strata, all blocks of stratum 7 are merged with those of stratum 8 and all blocks of stratum 9 are merged with those of stratum 10.

3.1.4 Sample size : A total number of 10,384 FSU's is selected for survey in the *central sample* at all-India level (rural & urban combined) in the 55th round. For *state samples*, there is a matching sample size as per the usual matching pattern being followed over the last few rounds. Sample size for the whole round for each State/UT and Sector (i.e. rural/ urban) are allocated equally among the four sub-rounds. Sample FSU's for each sub-round are selected afresh in the form of two independent sub-samples. The details of allocation and survey of FSUs, households and persons are given in Statement T₀.

3.1.5 Allocation of first-stage units (FSU's): State/ UT level rural sample size is allocated among the rural strata in proportion to population. State/ UT level urban sample size is first allocated among the three classes of towns (i.e. 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, is further allocated between two strata types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSU's in the respective frames with double weightage given to the first category of blocks. Stratum level allocations for both rural and urban areas of a sub-round are made in even numbers in order to facilitate selection of FSU's in the form of two independent sub-

samples. Sub-sample numbers are 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4.

3.1.6 Selection of first-stage units: For each sub-round, sample FSU's from each stratum are selected in the form of 2 independent sub-samples by following circular systematic sampling with (a) probability proportional to population for all rural strata other than stratum 1, and (b) equal probability for rural stratum 1 as well as all urban strata.

3.1.7 Formation of hamlet-groups in large villages and number of hamlet-groups selected for survey : Depending upon the values of approximate present population (P) and approximate total number of non-agricultural enterprises (E), decision is taken to divide the FSU into a fixed number of hamlet-groups (hg's - the term applicable for rural samples) / sub-blocks (sb's - the term applicable for urban samples) as per the rules given below:

| Value of P | No. of hg's/ sb's formed in the FSU as per population criterion | value of E | no. of hg's/ sb's formed in the FSU as per enterprise criterion |
|----------------|---|---------------|---|
| (1) | (2) | (3) | (4) |
| Less than 1200 | 1 @ | Less than 100 | 1 @ |
| 1200 – 1999 | 5 | 100 – 249 | 5 |
| 2000 – 2399 | 6 | 250 – 299 | 6 |
| 2400 – 2799 | 7 | 300 – 349 | 7 |
| 2800 – 3199 | 8 | 350 – 399 | 8 |
| (and so on) | | (and so on) | |

@ no. of hb's/ sb's = '1' means the whole FSU is considered for listing.

[For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hg's formed in the village as per population criterion is : 1 for $P < 600$, 5 for $P = 600$ to 999, 6 for $P = 1000$ to 1199, 7 for $P = 1200$ to 1399, 8 for $P = 1400$ to 1599, and so on.]

The number (D) of hamlet-groups (hg)/ sub-blocks (sb) formed in the FSU is such that the higher of the two values as per population and enterprise criteria is chosen. If value of P is less than 1200 (600 for certain hilly areas specified above) as well as value of E is less than 100 for an FSU, hg/ sb formation is not resorted to and the whole FSU is considered for listing. In case hg's/ sb's are formed in the sample FSU, the same is done by more or less equalizing population

3.1.8 Formation of Segments within FSU: The hg/ sb having maximum concentration of non-agricultural enterprises is selected with certainty for listing of households/ enterprises. This hg/ sb is referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's are selected circular systematically and these 2 selected hg's/ sb's together is referred to as segment 2 for doing a combined listing of households/ enterprises. Thus listing of households/ enterprises is done only in segments 1 and 2 of the FSU. The FSU not requiring hg/ sb formation is to be treated as **segment 1** for the purpose of data collection and estimation.

3.1.9 Stratification of households : All the households listed in a segment (both rural & urban) are stratified into two second stage strata, viz. ‘affluent households’ (forming second stage stratum 1) and **the rest** (forming second stage stratum 2). In rural sector, a household is classified as ‘affluent’ if the household owns certain items like motor car/ jeep, colour TV, telephone, etc. or owns land / livestock in excess of certain limits. In urban sector, the households having MPCE (monthly per capita consumer expenditure) greater than certain limit for a given town/city are treated as ‘affluent’ households for the present survey and are included in the frame of second stage stratum 1, and rest of the urban households are included in the frame of second stage stratum 2.

3.1.10 Number of households/ enterprises selected for survey: The number of households/ enterprises selected for survey from each FSU in general is given below:

| segment | household allotment (sch. 1.0) | | |
|--------------------------------------|------------------------------------|----------|--------------|
| | SSS | | |
| (1) | 1 (2) | 2 (3) | total (4) |
| FSU with hg/ sb formation: | | | |
| 1 | 1 | 3 | 4 |
| 2 | 1 | 7 | 8 |
| FSU with no hg/ sb formation: | | | |
| 1 | 2 | 10 | 12 |

(‘SSS’ means second stage stratum)

3.2 Estimation Procedure:

3.2.1 General procedure of selection of households: Sample households are selected from the respective frames by circular systematic sampling with equal probability. For the purpose of systematic sampling, households in the frame of 2nd stage stratum 2 are arranged by means of livelihood by land possessed classes for rural samples and by means of livelihood by MPCE classes for urban samples.

3.2.2 Approach: This estimation procedure fulfils the twin objectives of providing (a) estimates on sub-round basis, and (b) the estimate of error from the sub-sample replicates. Tabulated estimate for a sub-round is obtained by combining the estimates of the corresponding sub-sample replicates. Similarly, a tabulated estimate of the Round is obtained by combining the four sub-round-wise estimates

3.2.3 The following notations are being used in this section:

- a = subscript for the a-th stratum
- r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
- q = subscript for the q-th sub-round (q = 1,2,3 & 4)
- f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)

- s = subscript for the s-th segment of sampled village/ block (s = 1 & 2)
 c = subscript for the c-th 2nd stage stratum of households in the sampled village/ block (c = 1,2)
 j = subscript for the j-th sampled household
 p = subscript for pooled estimate
 z = size used for selection of an FSU from the sampling frame
 Z = total of sizes in the sampling frame for the stratum

[Note: For urban sector, z=1 and Z=N which is the total number of UFS blocks (FSU's) in the frame.]

- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases but excluding casualty and not reported cases) and used for tabulation
 L = number of sub-sample replicates surveyed and used for tabulation
 D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU
 H = total number of households listed in the appropriate frame
 h = number of sampled households surveyed and used for tabulation from the frame
 E = total number of enterprises listed in the appropriate frame
 e = number of sampled enterprises surveyed and used for tabulation from the frame
 y, x = value of characteristic y, x obtained in the sample
 \bar{Y}, \bar{X} = estimated value of characteristic y, x obtained from the sample.

3.2.4 ESTIMATES OF AGGREGATE: In the formulae given in this section, \bar{Y} is the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r). These formulae are provided for the general case of FSU's having two segments 1 & 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero for estimating a characteristic of household from a given 2nd stage stratum (c) in the selection frame

$$\text{Rural : } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad (1)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

$$\text{Urban: } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad ... (2)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

Note: For tabulating any characteristic from this detailed schedule $\hat{Y} = \sum_c \hat{Y}_c$ is to be used.

3.2.4.1 COMBINED ESTIMATE FROM SUB-SAMPLES: In the previous section, the estimate of a characteristic \hat{Y} as obtained for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r), actually represent \hat{Y}_{aqr} . The combined /pooled estimate for a particular stratum and a particular sub-round is computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr} \quad \dots(3)$$

3.2.4.2 ESTIMATE OF AGGREGATES FOR A SUB-ROUND AT STATE/ UT/ REGION LEVEL: If \hat{Y}_{qr} be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and \hat{Y}_{qp} , the combined/ pooled estimate of the aggregate based on the whole sample, for a given sub-round q, then

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \dots(4)$$

based on sub-sample replicate group r, and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \dots(5)$$

based on all sub-sample replicates.

3.2.4.3 ESTIMATES OF AGGREGATE FOR THE ROUND (i.e. all the 4 sub-rounds together) AT STATE/ UT/ REGION LEVEL: The estimates of aggregates for the whole round are computed as the simple average of the sub-round estimates derived in section 2.2.2, and are given below:

$$\hat{Y}_r = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qr} \quad \dots(6)$$

based on sub-sample replicate1 and 2*and

$$\hat{Y}_p = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qp} \quad \dots(7)$$

based on whole sample.

***Note:** In the Round, sub-samples 1, 3, 5 & 7 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate1 (annual) while sub-samples 2, 4, 6 & 8 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 2 (annual). This has been followed in the remaining sections also. Stratum level estimate for the Round is obtained similarly.

3.2.5 ESTIMATES OF RATIO: If \hat{X} & \hat{Y} be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio is given below:

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \dots(8)$$

based on sub-sample group r, and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \dots(9)$$

based on the whole sample.

The formulae for \hat{X} are obtained similarly by replacing \hat{Y} by \hat{X} and y by x in the above formulae stated in previous sections.

Note: Estimates for the sub-round \hat{R}_{qr} and \hat{R}_{qp} has been obtained by replacing \hat{Y}_r and \hat{Y}_p by \hat{Y}_{qr} and \hat{Y}_{qp} , respectively and \hat{X}_r and \hat{X}_p by \hat{X}_{qr} and \hat{X}_{qp} , respectively.

3.2.6 ERROR ESTIMATE : The estimated variances of pooled estimates (as computed above) are calculated on the basis of sub-sample replicate estimates of strata over State/ UT/ Region and obtained as follows:

$$\hat{Var}(\hat{Y}_p) = \frac{1}{L(L-1)} \sum_a \sum_{r=1}^L [(\hat{Y}_{ar} - \hat{Y}_{ap})^2] \quad (10)$$

$$\hat{MSE}(\hat{R}_p) = \frac{1}{L(L-1)\hat{X}_p^2} \sum_a \sum_{r=1}^L [(\hat{Y}_{ar} - \hat{Y}_{ap})^2 + \hat{R}_p^2 (\hat{X}_{ar} - \hat{X}_{ap})^2 - 2\hat{R}_p(\hat{Y}_{ar} - \hat{Y}_{ap})(\hat{X}_{ar} - \hat{X}_{ap})] \quad \dots(11)$$

Note: Such estimates for the sub-round has been obtained by suitable replacement as stated in 3.5.

3.3 TREATMENT FOR CASUALTY: (I) If $H_{fsc} > 0$ but $h_{rfsc}=0$ for a particular 2nd stage stratum of households in a FSU with m hamlet-group/ sub-block formation (ie. $D_f=1$), it is a case of casualty and the value of n will be reduced by 1.

II) If $D_f > 1$ and $H_{fs'c} > 0$ but $h_{fs'c}=0$ for s=1 (say, s') and if it is not a case for the entire FSU, here n will not be reduced by 1 and in this case $[(D_f-1)/2] \times H_{fsc}$ will be replaced by $\{H_{fs'c} + [(D_f-1)/2] \times H_{fsc}\}$ in the formula for s=2.

III) If $D_f > 1$ and $H_{fs'c} > 0$ but $h_{fs'c}=0$ for s=2 (say, s') and if it is not a case for the entire FSU, here n will not be reduced by 1 and in this case, H_{fsc} will be replaced by $\{H_{fsc} + [(D_f-1)/2] \times H_{fs'c}\}$ in the formula for s=1.

IV) If $H_{fsc} > 0$ but $h_{fsc}=0$ for a particular 2nd stage stratum of households in both the segments (s = 1 & 2) in an FSU, it is a case of casualty and the value of n will be reduced by 1.

Cases with n = 0 at stratum level, if any, has been referred to SDRD for suggesting measures before tabulation.

Section Four

Survey Findings

4.0 This report presents certain basic results on household consumer expenditure based on the 55th round survey of NSS. It concentrates mainly on the important indicators of living standard which the NSS consumer expenditure survey generates – viz. monthly per capita consumption expenditure (MPCE). The distributions of population by MPCE class, average MPCE and its break-up at all-India and State level for rural and urban areas are presented in this section. Finally, the average MPCE obtained from the 55th round has been compared with that of earlier rounds.

4.1 Distribution of population by MPCE classes: The distribution of persons by average MPCE for rural and urban areas separately has been graphically represented in Figure 1. It shows that the rural population is more concentrated in the lower level of MPCE than their counterpart in urban areas. For example, the population having average MPCE below Rs 800 accounts 91% in rural areas while it accounts only 62% in urban areas.

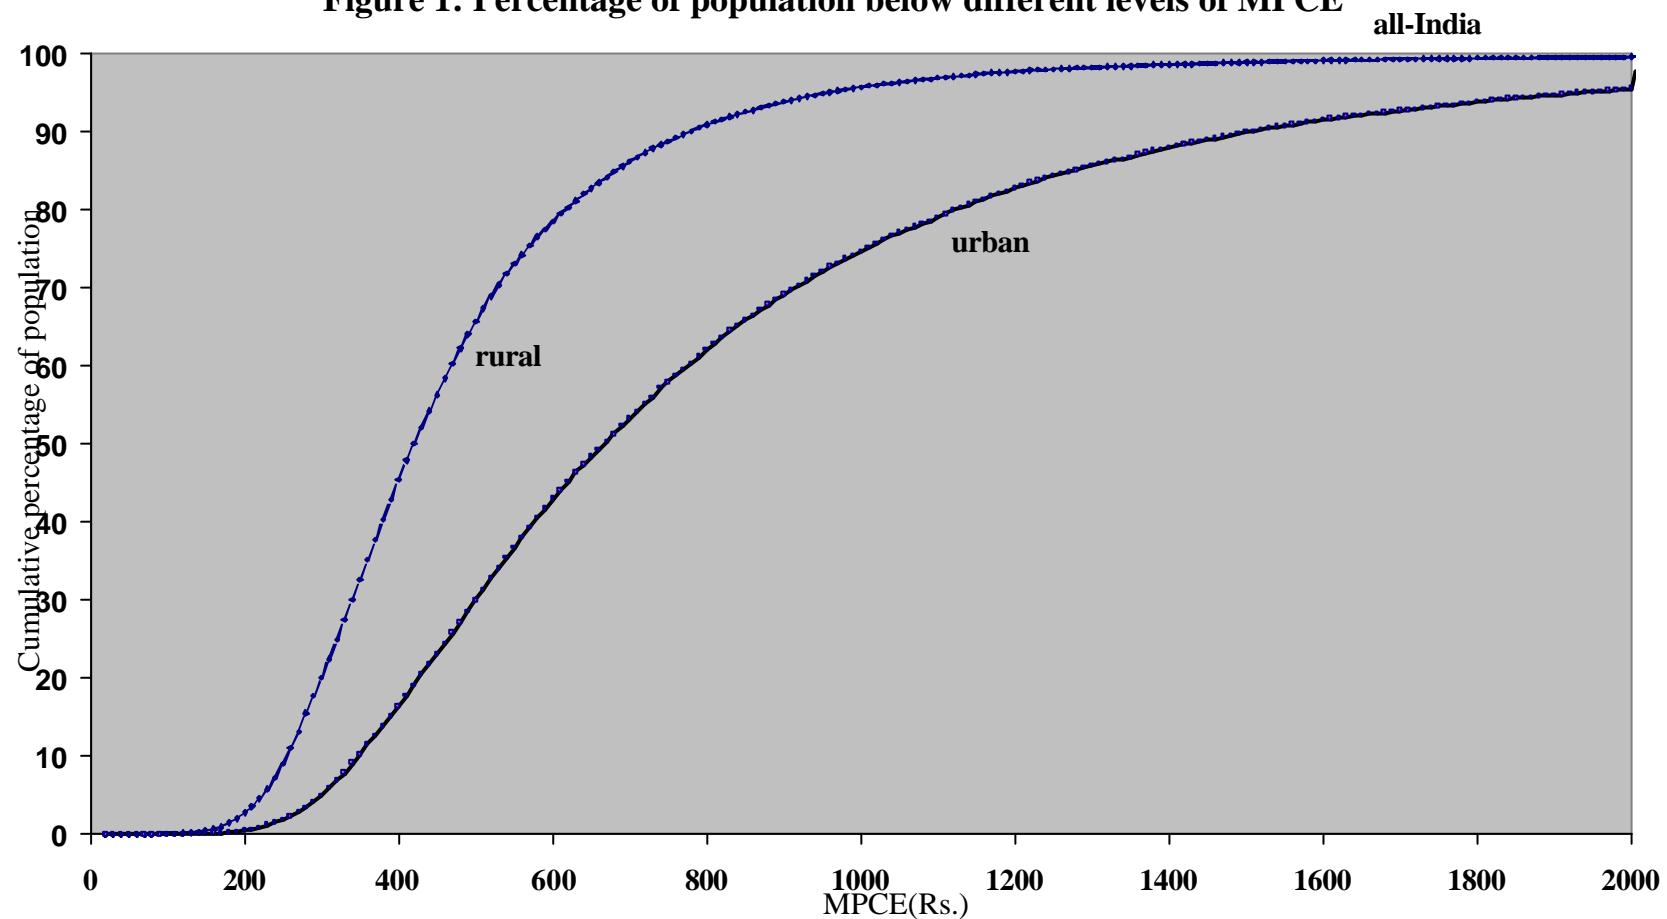

Statements 1R and 1U give per 1000 distribution of population by MPCE class for reference periods* of “7 days” and “30 days” separately for rural and urban India. These statements reveal that the distribution of persons over MPCE classes broadly agree between semi-rounds and also between two different reference periods which were used for collecting data of consumption on food, pan, tobacco & intoxicants. However, it may be seen that the distribution of persons is slightly tilted towards right in case of reference period “7 days” for food, pan, tobacco & intoxicants in comparison with the reference period “30 days”. This fact can be verified from Figures 2R and 2U. The results are consistent over semi-rounds. That is, the semi-rounds 1 and 2 results depict the same pattern.

4.2 Appendix Tables[@] 1R7, 1U7, 1R30, 1U30 give per 1000 distribution of persons by MPCE class for each State, UT and all-India for reference periods of “7 days” and “30 days”. It shows that the pattern of distribution is different for different States/UTs.

* Unless otherwise mentioned, reference period of “7 days” or “30 days” refers to the items of food, pan, tobacco & intoxicants. For rest of the items, there is only one reference period - either “30 days” or “365 days”.

[@] In table number, “7” or “30” indicates that the reference period for food, pan, tobacco & intoxicants is “7 days” or “30 days” respectively.

Figure 1: Percentage of population below different levels of MPCE

NSS Report No. 454: Household Consumer Expenditure in India, 1999-2000 – Key Results

Statement 1R: Per 1000 distribution of persons by MPCE classes

Figure 2R: Cumulative percentage distribution of persons by MPCE

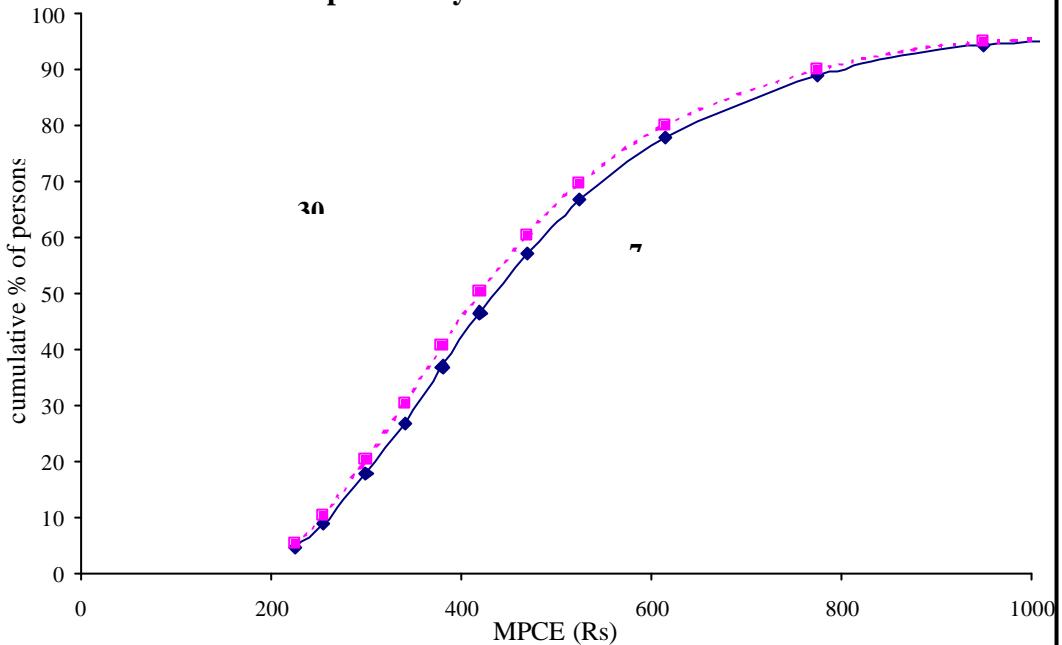

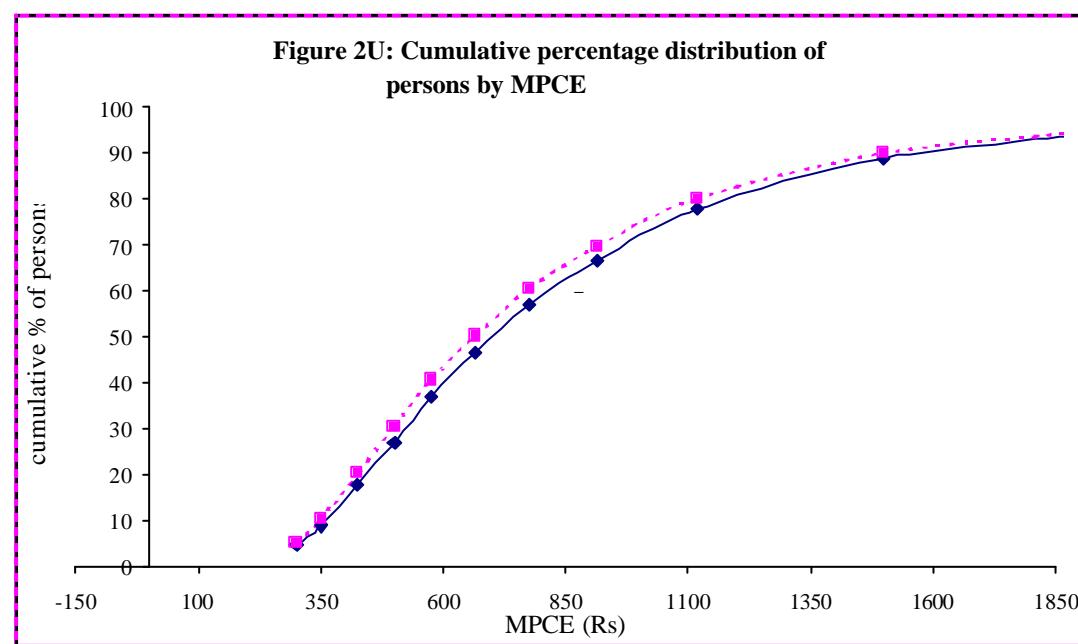

Figure 2U: Cumulative percentage distribution of persons by MPCE

In rural areas, the proportion of persons having low MPCE is found in States Orissa, Madhya Pradesh and Bihar. The same with high MPCE is found in Punjab, Kerala and Haryana. For smaller States and UT, the proportion of persons with low MPCE is generally small.

In urban areas, the proportion of persons having low MPCE is found to be in States Bihar, Orissa and Uttar Pradesh. As in rural areas, the proportion for high MPCE is found in Punjab, Kerala and Haryana and the proportion of persons with low MPCE is generally small for smaller States and UT. However, the disparity of the distribution of persons by MPCE class in urban areas among States and UTs is much less compared to rural areas.

4.3 Distribution of households by MPCE classes: The distribution of households by MPCE class for each State, UT and all-India is given in Appendix Tables 2R and 2U. The pattern of the distribution of households is similar as that of persons.

4.4 Average MPCE : Statements 2R and 2U give average MPCE by MPCE class by semi-round and both the reference period separately for rural and urban areas. The estimates are found to be consistent over semi-rounds for each MPCE class in both rural and urban areas.

Statement 2R: Average MPCE (Rs) by MPCE class

| MPCE class (Rs) | average MPCE(Rs) | | | | | | Rural | |
|-----------------------|------------------------|--------------|----------|-------------------------|--------------|----------|--------------|--|

Figure 3: Average MPCE by sector and reference period

The estimates of average MPCE by semi-round for two different reference periods viz. “7 days” and “30 days” for food, pan, tobacco & intoxicants have been exhibited in the Statements 3R and 3U. It is found that the estimates are close for different reference periods as well as for different semi-rounds. The percentage differences are normally within 10% limit for both reference periods and semi-rounds. Exceptions are found in case of, mainly, some smaller States and UTs.

Statement 3R: Average MPCE by semi-round and reference period for each State, UT and all-India

(in Rs)

In the rural areas of major States, the average MPCE varied from Rs 330 to Rs 770 according to “30 days” reference period and from Rs 380 to Rs 790 according to “7 days” reference period. Among these States, average MPCE is low in Orissa (Rs 373 for “30 days” and Rs 388 for “7 days”), Bihar (Rs 385 for “30 days” and Rs 404 for “7 days”) and Madhya Pradesh (Rs 402 for “30 days” and Rs 412 for “7 days”). It was high in Kerala (Rs 766 for “30 days”, Rs. 787 for “7 days”), Punjab (Rs 742 for “30 days”, Rs 785 for “7 days”) and Haryana (Rs 714 for “30 days”, Rs 728 for “7 days”).

In the urban areas of 15 major States, the average MPCE ranged between Rs 600 to Rs 975 for “30 days” and between Rs 620 to Rs 1050 for “7 days”. The average urban MPCE was high in Tamil Nadu (Rs 972 for “30 days”, Rs 1047 for “7 days”), Maharashtra (Rs 973 for “30 days”, Rs 995 for “7 days”) and Kerala (Rs 933 for “30 days”, Rs 953 for “7 days”) and low in Bihar (Rs 602 for “30 days”, Rs 621 for “7 days”) and Orissa (Rs 618 for “30 days”, Rs 638 for “7 days”).

Appendix Tables 3R7, 3R30, 3U7 and 3U30 give the average MPCE by MPCE class for each State, UT and all-India separately for rural and urban areas and different reference periods.

4.5 Composition of Consumer Expenditure: The break-up of average MPCE by broad groups of items for different reference periods is given in Statement 4 at all-India level. It suggests that in both rural and urban areas the average MPCE based on data with a reference period of 7 days for food, pan, tobacco & intoxicants is consistently higher than the average MPCE for the reference period of 30 days. This is true for all States, UTs and all-India. The MPCE based on “7 days” reference period was higher by 3.9% than that based on “30 days” data in rural India. The corresponding difference was 2.8% for urban India.

Statement 4: Break-up of total monthly per capita consumer expenditure (MPCE) by broad group of items for different reference periods

| item of consumption | (in Rs) | | | |

Statement 4 also shows that the share of food in total consumption expenditure in rural India was 60.9% according to “7 days” and 59.4% according to reference period “30 days”. The corresponding shares in urban India were 49.4% and 48.1%, respectively.

Tables 4R and 4U give the break-up of MPCE by different groups of items of consumption for each state, UT and all-India. The percentages to total MPCE corresponding to these tables are given in Tables 5R and 5U, respectively. The percentage composition of MPCE at all-India level is given in Figures 4R and 4U.

**Figure 4R: Percentage Composition of Consumer Expenditure
Rural India (ref. Period "30 days")**

**Figure 4U: Percentage Composition of Consumer Expenditure
Urban India (ref. period "30 days")**

The break-up of average MPCE by broad groups of items for different reference periods is given at all-India level in Statements 5R and 5U. In **rural India**, the percentage share of food expenses has steadily decreased from around 73% to 60% over the period 1972 – 2000. During this period, the average MPCE has increased from Rs 44 to Rs 486 (ref. Period “30 days” for food, pan, tobacco & intoxicants). MPCE became 11 times in 55th round than in 27th round.

In **urban India**, the percentage share of food expenses has decreased from around 64% to 48% over the period 1972 – 2000. During this period, the average MPCE has increased from Rs 63 to Rs 855 (ref. period “30 days” for food, pan, tobacco & intoxicants). MPCE became 13.6 times in 55th round than in 27th round.

Statement 5R: Percentage distribution of MPCE by 18 groups of consumption items over NSS rounds

27th round - October 1972 to September 1973

43rd round - July 1987 to June 1988

32nd round - July 1977 to June 1978

50th round - July 1993 to June 1994

38th round - January 1983 to December 1983

55th round – July 1999 to June 2000

4.6 Comparison of average MPCE over NSS rounds: The average MPCE for 55th round and 50th round at current and constant prices are given in Statement 6. Relative to 1994 (50th round) the increase in average MPCE in rural India, in real terms (after adjustment of rise in prices) was 12% according to "7 days" data and 8% according to "30 days" data. The corresponding figures for urban India were 19% and 16%, respectively.

Statement 6: Average MPCE (Rs) at current and constant prices

| | | rural | | | urban | | |
|-------------------------|--------------------------------------|---|---|---------|---|---|---------|
| MPCE | | 50 th round (July 1993-June 1994) | 55 th round (July 1999– June 2000) | | 50 th round (July 1993-June 1994) | 55 th round (July 1999– June 2000) | |
