Overview

ABSTRACT

The National Sample Survey Office (NSSO) conducts regular consumer expenditure surveys as part of its "rounds", each round being normally of a year's duration and covering more than one subject of study. The surveys are conducted through household interviews, using a random sample of households covering practically the entire geographical area of the country. Surveys on consumer expenditure are being conducted quinquennially on a large sample of households from the 27th round (October 1972 - September 1973) onwards. Household consumer expenditure is measured as the expenditure incurred by a household on domestic account during a specified period, called reference period. It includes the imputed values of goods and services, which are not purchased but procured otherwise for consumption. In other words, it is the sum total of monetary values of all the items (i.e. goods and services) consumed by the household on domestic account during the reference period. The imputed rent of owner-occupied houses is excluded from consumption expenditure. Any expenditure incurred towards the productive enterprises of the households is also excluded from household consumer expenditure. The schedule also collected some other household particulars including age, sex and educational level etc. of each household member. The third quinquennial survey on household consumer expenditure was carried out during January-December, 1983. A three-digit code system, for identification of each item of consumer expenditure, has been introduced in this round: the hundreds and tens place indicates a broad division of items; the hundreds and tens place together specify a group of items and all the three digits together indicates a particular item. In the system of code structure introduced here, an item code ending with 9 represents 'others' that is any item not classified under the particular group. Similarly, a code with 'O' in the units place would be identified as a sub-total item.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Randomly selected households based on sampling procedure and members of the household

Scope

NOTES

The NSSO surveys on consumer expenditure aim to measure the household consumer expenditure in quantitative terms disaggregated by various household characteristics.

The data for this survey is collected in the NSS Schedule 1.0 used for household consumer expenditure. For this round, the schedule had 12 blocks.

Blocks 1 and 2 - are similar to the ones used in usual NSS rounds. These are used to record identification of sample households and particulars of field operations.

Block-3: Household characteristics like, household size, principal industry-occupation, social group, land possessed and cultivated, type of dwelling etc. are recorded in this block.

Block-4: In this Block the detailed demographic particulars including age, sex, educational level, marital status, number of meals usually taken in a day etc. are recorded.

Block-5: In this block cash purchase and consumption of food, pan, tobacco, intoxicants and fuel & light during the last 30 days are recorded.

Block-6: Consumption of clothing during the last 30 and 365 days is recorded in this block.

Block-7: Consumption of footwear during the last 30 and 365 days is recorded in this block.

Block-8 : Expenditure on miscellaneous goods and services and rents and taxes during the last 30 days has been recorded in this block.

Block-9 : Expenditure for purchase of durable goods and selected miscellaneous goods and services (not included in block 8) for domestic use is recorded here.

Block-10 : Particulars of dwelling units are recorded in this block.

Block-11 : Perception of the household regarding sufficiency of food is recorded in this block.

Block-12 : Summary of consumer expenditure during last 30 days is recorded in this block.

Coverage

GEOGRAPHIC COVERAGE

The survey covered the whole of the Indian Union.

UNIVERSE

The survey used the interview method of data collection from a sample of randomly selected households and members of the household.

Sampling

Deviations from Sample Design

There was no deviation from the original sampling design.

Weighting

Two different weights have been provided in each file in the data set. Details are as follows:-

1. Weight for each sub sample is stored in the variable name : Wgt_SubSample
2. Combined subsample weight is stored in the variable name : Wgt_Combined

Questionnaires

Overview

The data for this survey is collected in the NSS Schedule 1.0 used for household consumer expenditure. For this round, the schedule had 12 blocks. Summary description of the schedule 1.0 on consumer expenditure is given below.

Blocks 1 and 2 - are similar to the ones used in usual NSS rounds. These are used to record identification of sample households and particulars of field operations.

Block-3: Household characteristics like, household size, principal industry-occupation, social group, land possessed and cultivated, type of dwelling etc. are recorded in this block.

Block-4: In this Block the detailed demographic particulars including age, sex, educational level, marital status, number of meals usually taken in a day etc. are recorded.

Block-5: In this block cash purchase and consumption of food, pan, tobacco, intoxicants and fuel & light during the last 30 days are recorded.

Block-6: Consumption of clothing during the last 30 and 365 days is recorded in this block.

Block-7: Consumption of footwear during the last 30 and 365 days is recorded in this block.

Block-8 : Expenditure on miscellaneous goods and services and rents and taxes during the last 30 days has been recorded in this block.

Block-9 : Expenditure for purchase of durable goods and selected miscellaneous goods and services (not included in block 8) for domestic use is recorded here.

Block-10 : Particulars of dwelling units are recorded in this block.

Block-11 : Perception of the household regarding sufficiency of food is recorded in this block.

Block-12 : Summary of consumer expenditure during last 30 days is recorded in this block.

Within each district of a State/ UT, two basic strata were formed:

(i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district.

Literal question

Stratum

Sub Sample (SubSample)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete	Valid cases: 117604
Format: character	Invalid: 0
Width: 1	

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Reason for substitution (Substn_Code)

File: Blocks 1,3 and 10- Household Characteristics

Literal question

Reason for substitution

Interviewer instructions

Reason for substitution : For the originally selected sample household which could not be surveyed, the reason for its becoming a casualty will be recorded against this item in terms of the specified codes.

Whether household maintains account of income (Income_account)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Description

Household :

A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

Literal question

Whether household maintains account of income?

Description

Total members in the household (B3_1_q4)

File: Blocks 1,3 and 10- Household Characteristics

Household :

A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

Household size :

The size of a household is the total number of persons in the household.

Literal question

Total members in the household?

Interviewer instructions

The size of the sample household i.e., the total number of persons normally residing together (i.e., under the same roof) and taking food from the same kitchen (including temporary stayaways and excluding temporary visitors) will be recorded against this item. This number will be same as the last serial number recorded in column 1 of block 4.

NIC Code (B3_1_q5a)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete
Format: character
Width: 3

Valid cases: 112445
Invalid: 0

Literal question

Which industry are you working in?

Interviewer instructions

The description of the principal household industry-occupation will be recorded in the space provided. The right hand side of item 2 has been divided into two lines. The appropriate three digit industry code of the NIC 1970 will be recorded in the first line and the relevant occupation family of the NCO 1968 will be entered in the second line.

To determine the principal household industry-occupation, the general procedure to be followed is to list all the gainful occupations pursued by the members of the household excluding those employed by the household and paying guests (who in view of their staying and taking food in the household are considered as its normal members) during the one year period preceding the date of survey, no matter whether such occupations are pursued by the members in their principal or subsidiary (on the basis of earnings) capacity. Out of the occupations listed, that one which fetched the maximum earnings to the household during the last 365 days preceding the date of survey would be considered as the principal household occupation. It is quite possible that the household occupation, thus determined as the principal one, may be pursued in different industries by one or more members of the household. In such cases, the particular industry out of all the different industries corresponding to the principal occupation, which fetched the maximum earnings, should be considered as the principal industry of the household. In extreme cases, the earnings may be equal in two different occupations or industry- occupation combinations. By convention, in such cases, priority will be given to the occupation or industry-occupation combination of the senior most among the participating members. For households deriving income from non-gainful activities only, a dash (-) may be put against this item.

What is your religion?

Interviewer instructions

The religion of the household will be recorded against this item in codes. If different members of the household claim to belong to different religions, the religion of the head of the household will be considered as the religion of the household.

Social Group Code (B3_1_q8)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Social Group Code (B3_1_q8)

File: Blocks 1,3 and 10- Household Characteristics

Type: Discrete
Format: character
Width: 1

Valid cases: 117604
Invalid: 0

Literal question

Which social group do you belong to?
Do you come under scheduled caste or scheduled tribe or others category?

Interviewer instructions

Whether or not the household belongs to scheduled tribe or scheduled caste or neo Buddhist will be indicated against this item in terms of the specified codes.

Homestead type (B3_1_q9)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 117604
Invalid: 0

Literal question

Homestead type

Interviewer instructions

If the homestead (house and house site) is owned by the household, code '1' will be entered in the box space provided against this item. But, if that is not owned by otherwise possessed, code 2 will be recorded.

Land area owned (B3_1_q10)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Continuous
Format: numeric
Width: 7
Decimals: 2
Range: 0-2400.24

Valid cases: 117604
Invalid: 0
Minimum: 0
Maximum: 2400.2
Mean: 2.3
Standard deviation: 10.4

Literal question

How much land do you own?

Interviewer instructions

The total land possessed by the household as on the date of survey will be recorded against this item.

Monthly per capita expenditure (B3_1_q11)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Continuous
Format: numeric
Width: 8
Decimals: 2
Range: 0-27588

Valid cases: 117604
Invalid: 0
Minimum: 0
Maximum: 27588
Mean: 146
Standard deviation: 153.1

Description

Monthly per capita expenditure (B3_1_q11)

File: Blocks 1,3 and 10- Household Characteristics

Household consumer expenditure :

The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

Monthly per capita expenditure (MPCE) :

For a household, this is household consumer expenditure over a period of 30 days divided by household size. A person's MPCE is understood as that of the household to which he/she belongs.

Literal question

Monthly per capita expenditure?

Type of latrine code (B3_1_q12)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 117604
Invalid: 0

Literal question

Type of latrine ?

Interviewer instructions

Usually a household will be using only one type of latrine out of the 9 types described in the code list. The code for the particular type will be recorded in this line. If the household has access to more than one type of latrine, preference will be given to the type having the higher code among codes 1 to 7 only, codes to be used are :

no latrine.....1 flush system (shared).....6
service (shared).....2 flush system (exclusive).....7
service (exclusive).....3 others (shared).....8
septic tank (shared).....4 others (exclusive).....9
septic tank (exclusive).....5

No. of flush system latrines (B3_1_q13)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Continuous
Format: numeric
Width: 2
Decimals: 0

Valid cases: 117604
Invalid: 0

Literal question

No. of flush system latrines ?

Interviewer instructions

If the household uses flush system of latrine, the number of such latrines to which the members of the household have access will be noted here. If only one such latrine is shared by more than one household, then also the entry will be 1. If the household has, for its exclusive use, one or more latrine and also it shares some with others, the total number used will be recorded. If all the units are shared, the total number of those will be recorded.

Primary source of drinking water (B3_1_q14)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Primary source of drinking water (B3_1_q14)

File: Blocks 1,3 and 10- Household Characteristics

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

Primary source of drinking water?

Interviewer instructions

The source from which the household fetches water for drinking will be noted here in terms of code numbers printed below the block. The household may use more than one source of water for drinking purposes but only the code corresponding to the primary or principal source of drinking water will be recorded here. The codes to be used are:

tap water.....1 pond.....5
 tube well.....2 canal, river, spring.....6
 hand pump.....3 others.....9
 pucca well.....4

Source of energy for cooking (B3_1_q15)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

What is the primary source of energy that is being used by the household for cooking?

Interviewer instructions

Items : primary source of energy used for cooking and lighting : Against these two items, the code corresponding to the primary source of energy that is being used by the household for the purpose of cooking and for lighting, will have to be recorded. If more than one type of energy is utilized, the primary or principal one on the basis of its use will have to be identified and the corresponding code will be noted in the appropriate box.

Source of energy for lighting (B3_1_q16)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

What is the primary source of energy that is being used by the household for lighting?

Interviewer instructions

Items : primary source of energy used for cooking and lighting : Against these two items, the code corresponding to the primary source of energy that is being used by the household for the purpose of cooking and for lighting, will have to be recorded. If more than one type of energy is utilized, the primary or principal one on the basis of its use will have to be identified and the corresponding code will be noted in the appropriate box.

Dwelling unit code (B10_q1)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Dwelling unit code (B10_q1)

File: Blocks 1,3 and 10- Household Characteristics

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Description

This item refers only to the dwelling unit or the actual residence of the sample household. The dwelling unit may be an entire structure or may be only a part of a structure.

Literal question

Do you own the dwelling unit? Or is it hired or otherwise occupied?

Covered Area (sq. meter) (B10_q2)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Continuous

Format: numeric

Width: 5

Decimals: 0

Range: 0-38138

Valid cases: 117604

Invalid: 0

Minimum: 0

Maximum: 38138

Mean: 43.5

Standard deviation: 148

Literal question

How much is the covered area of the dwelling?

Interviewer instructions

This will be the sum of the floor areas of all the rooms, kitchen etc. and covered and/or uncovered verandah of the building. The area will be recorded in square meters and in whole number. The verandah will mean the space adjacent to the rooms (both living and other) which is used as an access to the rooms of the dwelling unit. Verandah covered on four side by walls with a room above, is a covered verandah. But the verandah not surrounded by walls on four sides is an uncovered verandah, irrespective of whether there is/roof or not.

Land Possession Code (B10_q3)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

Land Possession Code?

Interviewer instructions

The land on which the residential building is constructed may be either owned, or rented or leased in or otherwise occupied. Land leased in for 30 years or more will be classified as owned. In case of multistoried buildings if an apartment is owned and occupied by household, land possessed code in that case will also be "1" i.e. owned.

Plinth level (B10_q4)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

Plinth level

Plinth level (B10_q4)

File: Blocks 1,3 and 10- Household Characteristics

Interviewer instructions

Plinth level means constructed ground floor level of the house from the ground at the main entrance of the dwelling unit. If there is a basement that is, some floor area below the ground level, then code 1 will be recorded. In case there is no distinction between level of the ground (i.e. land) and the level of the lowest floor then plinth level will be 0.00 meter and code 2 will be recorded against this item. If the level of the lowest floor is higher than that of the ground (land) i.e., more than 0.00 meter then code 3 will be recorded. Here 'plinth' refers to the foundation base of the house.

Type of Dwelling (B10_q5)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

What is the type of dwelling of the household? Is it an independent house or a flat or any other type of dwelling?

Interviewer instructions

A dwelling unit may be in a chawl or bustee, or an independent house or a flat. Applicable code for each type of dwelling will be entered against this item.

Type of Structure (B10_q6)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

What is the type of structure of the dwelling?

Interviewer instructions

The structures have been classified into three categories, namely, pucca, semi-pucca and katcha on the basis of materials used for construction.

Floor Type (B10_q7)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117604

Invalid: 0

Literal question

Floor Type

Interviewer instructions

Floor of a house may be made of (i) mud, (ii) wood bamboo, reed, (iii) brick, cement, stone (iv) any other materials. Codes have been provided for type of floor built with any of these materials. Appropriate code number will be recorded against this item after ascertaining the material which has been used for construction of the floor.

Monthly rent (actual of imputed for urban only) (B10_q8)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Continuous	Valid cases: 117604
Format: numeric	Invalid: 0
Width: 8	Minimum: 0
Decimals: 2	Maximum: 20000
Range: 0-20000	Mean: 37.9
	Standard deviation: 146.1

Literal question

Monthly rent (actual of imputed for urban only)

Interviewer instructions

This information will be collected for households for urban areas only. Actual monthly rent of the dwelling unit will be noted if it is taken on rent. But if a household in urban areas is not residing in a rented house that is, residing in a house which is either owned or otherwise occupied without paying any rent, then the rent will be imputed considering as if it was taken on rent. Imputation will be done on the basis of prevailing rate of rent for similar houses in the locality or surrounding areas. It may be mentioned in this connection that, rent does not include any selami/pugree or any kind of cuss payable to local self-government or to government. It is merely an amount payable to the owner or to some other party as per contract between the occupier and the person who lets it out. A household may occupy a dwelling unit which is neither owned, nor hired in. In such cases also the imputed rent will be recorded.

Condition of the house code (B10_q9)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete	Valid cases: 117604
Format: character	Invalid: 0
Width: 1	

Literal question

Condition of the house code?

Interviewer instructions

Against this item is to be recorded the physical condition of the house in the sense whether the house is excellent for habitation and seems to need no major repairs, fairly good and needs no major repairs; bad dilapidated and impoverished (either needs immediate repairs/structural changes or not suitable for permanent habitation at all). Different codes are given in the schedule and appropriate code has to be entered against this item. Major repairs will constitute such essential repairs of the house without which the house is risky or very healthy for human habitation. The condition of the house will have to be assessed at the time of investigation and the appropriate code will be recorded here.

Does the household get enough food? (B10_q11)

File: Blocks 1,3 and 10- Household Characteristics

Overview

Type: Discrete	Valid cases: 117604
Format: character	Invalid: 0
Width: 1	

Description

Does the household get enough food? (B10_q11)

File: Blocks 1,3 and 10- Household Characteristics

Household :

A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

Literal question

Does the household get enough food?

Interviewer instructions

The expression 'getting two square meals a day', as is used in common parlance, conveys that the concerned person get, by and large, enough food to eat. While putting this question to the informant, it is thus presumed that the informant has a clear understanding about the meaning of it. There are equivalent phrases conveying the same meaning in regional languages. It is, therefore, important to put the proper question in the local language and record the answer given by the informant in terms of prescribed code numbers.

Care should however be taken to see that the informant is not offended with this question. Neither this question should be asked to those whose reported consumption would obviously indicate that they get enough to eat. If the informant reports that the members of the household gets two square meals a day, throughout the year, the code to be entered in the box space of this block is 1. If adequate food is available in only a few months of the year the code 2 will be noted. Code 3 will indicate that the household do not usually get two square meals a day for its members.

Sub Round

Sub Sample (SubSample)

File: Block 4 - Food intake

Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 117423

Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Description

Meal

A 'Meal' is composed of one or more readily cat able (generally cooked) items of food, the usual major constituent of which is cereal food. The meals consumed by a person twice or thrice a day provide him/her the required energy of (calorie) and other nutrients for living and for pursuing his/her normal avocations. A 'meal' as opposed to 'snacks' as opposed to 'snacks', 'nasta' or 'high tea', contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity of non-cereal food. Even that, if the total quantum of food in plate is heavy as a meal, the contents of the food plate will also be considered as a meal. Sometimes the contents of a 'nasta' may not be very different from the contents of a 'meal'. The difference in quantity will there be the guiding factor for deciding whether the plate is to be led as a 'meal' or a nasta.

No. of meals served to guests in ceremony (B3_2_qa6_iv)

File: Block 4 - Food intake

Literal question

No. of meals served to guests in ceremony?

Interviewer instructions

Ceremonies are performed to solemnize some events of life like, birth, annarambha, birthday, marriage etc. Members of a household may have to perform some religious rites consequent upon the death of a person. For various religious faiths, there are some days in a year which are observed with ceremonial performances like offering puja, prayer, ritual performances etc. Such ceremonies may be performed by household members as required under the social/religious customs and not incurring expenditure for entertaining guests. On the other hand, some households may spend some amount of money for entertaining guests with meals which are considered as essential part of the ceremonies performed by them. The purpose of providing this block in this schedule is to estimate the meals served to guests on ceremonies performed by the household during the last 30 days preceding the date of enquiry as also the meals served to guests and employees (non-members only) on any other occasion (other than ceremonies). Hence, only those ceremonies on which guests were entertained with meals, should be listed here.

No. of meals served to employees in other than ceremony (B3_2_qb2)

File: Block 4 - Food intake

Literal question

No. of meals served to employees in other than ceremony?

Interviewer instructions

A person rendering domestic service to a number of households during the day time (like cleaning utensils, dusting and cleaning of rooms, washing linens, carrying water from outside etc.) and gets some food from each of the households he/she serves. Although the quantum of food received from a single household may, by quantity, be far less than a full meal, the total quantity of food received from all the households taken together would often, if not more, be at least equivalent to a full meal. In this particular situation, the person will be considered to be consuming one meal every day under 'meals taken away from home'.

As opposed to 'snacks,, 'nasta' or 'high tea'. Contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity or non-cereal food. Even then, if the total quantum of food in plate is as heavy as a meal, the contents of the food plate will also be considered as a 'meal'. Sometimes the contents of a 'nasta' may not be very different from the contents of a 'meal'. The difference in quantity will there be the guiding factor for deciding whether the plate is to be labeled as a 'meal' or a 'nasta'.

Literal question

If you or any member of the household take meals free of cost , then how many such meals do you take in a day?

Meals (Payment) (B4_q11)

File: Block 4 - Food intake

Overview

Type: Continuous
Format: numeric
Width: 3
Decimals: 0
Range: 0-600

Valid cases: 117423
Invalid: 0
Minimum: 0
Maximum: 600
Mean: 2.2
Standard deviation: 11.7

Description

A 'meal' is composed of one or more readily eatable (generally cooked) items of food, the usual major constituent of which is cereal food. The meals consumed by a person twice or thrice a day provide him/her the required energy (calorie) and other nutrients for living and for pursuing his/her normal a vocations. A 'meal'. As opposed to 'snacks,, 'nasta' or 'high tea'. Contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity or non-cereal food. Even then, if the total quantum of food in plate is as heavy as a meal, the contents of the food plate will also be considered as a 'meal'. Sometimes the contents of a 'nasta' may not be very different from the contents of a 'meal'. The difference in quantity will there be the guiding factor for deciding whether the plate is to be labeled as a 'meal' or a 'nasta'.

Literal question

If you or any member of the household take meals away from home on payment, then how many such meals do you take?

Interviewer instructions

Meals (Payment) (B4_q11)

File: Block 4 - Food intake

For the purpose of making entry in column "Meals (Payment)". 'Meals received on payment' will mean that the informant has to incur some expense or part with a certain portion of his salary/wage for getting the meals. Meals purchased from hotel, restaurant or an eating house will be considered as 'meals taken away from home on payment' and will have to be counted also for making entry in column "Meals (Payment)".

Meals(At Home) (B4_q12)

Sub Sample (SubSample)

File: Block 5 - Monthly household expenditure on food and non food items

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 3428080
Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Literal question

How much quantity of the home grown item was consumed by the household in the last 30 days?

Interviewer instructions

Consumption of any of the items in the block, made out of home-grown/produced stock i.e. out of goods produced by the household in its own farm or manufacturing establishments, during the last 30 days will be recorded here. The quantity of an item consumed out of home-grown stock will be recorded in column (6) and its value will be shown in column (7). The value will be imputed at the ex-farm or ex-factory price. Home produced agricultural produce include any produce obtained from cultivation by the household or obtained in the form of rent-share of land leased out. Produce brought from village home and consumed in urban residence will also be treated as 'home-grown stock'.

Cloth Type Code

Interviewer instructions

In this column, the type code will be entered for the item recorded in column (2). A 'type code' will specify the material e.g. cotton, wool, silk, etc., with which the item of clothing is made. If an item is made of cotton, a further distinction will be made as mill-made powerloom, handloom and khadi production. The type codes are

cotton
 mill-made.....1 art silk, rayon.....6
 powerloom.....2 or other synthetic textile
 handloom.....3 pure silk.....7
 khadi.....4 mixed-wool/synthetic/.....8
 wool.....5 cotton/silk
 others.....9

How much quantity of the home grown item was consumed by the household in the last 30 days?

Interviewer instructions

Consumption of any of the items in the block, made out of home-grown/produced stock i.e. out of goods produced by the household in its own farm or manufacturing establishments, during the last 30 days will be recorded here. The quantity of an item consumed out of home-grown stock will be recorded in column (7) and its value will be shown in column (8). The value will be imputed at the ex-farm or ex-factory price. Home produced agricultural produce include any produce obtained from cultivation by the household or obtained in the form of rent-share of land leased out. Produce brought from village home and consumed in urban residence will also be treated as 'home-grown stock'.

Valid cases: 607025

Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Cloth Type Code

Interviewer instructions

In this column, the type code will be entered for the item recorded in column (2). A 'type code' will specify the material e.g. cotton, wool, silk, etc., with which the item of clothing is made. If an item is made of cotton, a further distinction will be made as mill-made powerloom, handloom and khadi production. The type codes are

cotton
mill-made.....1 art silk, rayon.....6
powerloom.....2 or other synthetic textile
handloom.....3 pure silk.....7
khadi.....4 mixed-wool/synthetic/.....8
wool.....5 cotton/silk
others.....9

	Standard deviation: 513535.7

Literal question

How many pairs of the home grown item were consumed by the household in the last 365 days?

Interviewer instructions

Quantity of Home Grown Items Consumed (Pair) (B7_2_q6)

File: Block 7pt2 - Household expenditure on footwear

Consumption of any of the items in the block, made out of home-grown/produced stock i.e. out of goods produced by the household in its own farm or manufacturing establishments, during the last 30 days will be recorded here. The quantity of an item consumed out of home-grown stock will be recorded in column (6) and its value will be shown in column (7). The value will be imputed at the ex-farm or ex-factory price. Home produced agricultural produce include any produce obtained from cultivation by the household or obtained in the form of rent-share of land leased out. Produce brought from village home and consumed in urban residence will also be treated as 'home-grown stock'.

Sub Sample (SubSample)

File: Block 8 - Monthly household expenditure on misc. goods and services

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 836531
Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

File: Block 9pt1 - Household expenditure for purchase of durables

Overview

Type: Continuous	Valid cases: 319833
Format: numeric	Invalid: 0
Width: 8	Minimum: 19
Decimals: 2	Maximum: 85585.4
Range: 19.04-85585.36	Mean: 2137.2
	Standard deviation: 1521.7

Description

Sub-sample multiplier generated by NSSO

Old Household Type (Old_HH_Type)

File: Block 9pt1 - Household expenditure for purchase of durables

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 319833
Invalid: 0

Key to identify a household (HHID)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 16

Valid cases: 14311
Invalid: 0

Sector (Sector)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 14311
Invalid: 0

Description

Sector : A word used for the rural-urban demarcation.

Literal question

Sector

State_Region (State_Region)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 3

Valid cases: 14311
Invalid: 0

Description

Regions are hierarchical domains of study below the level of State/ Union Territory in the NSS.

Literal question

State_Region

State (State)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 2

Valid cases: 14311
Invalid: 0

Literal question

State

Stratum (Stratum)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 3

Valid cases: 14311
Invalid: 0

Description

Within each district of a State/ UT, two basic strata were formed:

(i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district.

Literal question

Stratum

Sub Round (SubRound)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 14311
Invalid: 0

Description

The survey period of one year of this round was divided into four sub-rounds of three months duration. Equal number of sample villages and blocks were allotted for survey in each of these four sub-rounds.

Literal question

Sub Round

Sub Sample (SubSample)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 14311
Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Literal question

Sub Sample

Village/Bl. Srl. No. (Vill_Blk_Slno)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 5

Valid cases: 14311
Invalid: 0

Description

The first-stage units are census villages in the rural sector and the NSSO urban frame survey (UFS) blocks in the urban sector. This variable indicates the serial number assigned to such units.

Literal question

Village/Bl. Srl. No.

Sample Household No. (Hhold_no)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 2

Valid cases: 14311
Invalid: 0

Literal question

Sample Household No.

Monthly per capita expenditure (B3_1_q11)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Continuous
Format: numeric
Width: 7
Decimals: 2
Range: 0-6365.19

Valid cases: 14311
Invalid: 0
Minimum: 0
Maximum: 6365.2
Mean: 214.4
Standard deviation: 210.9

Literal question

Monthly per capita expenditure

MPCE Code (MPCE_Code)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 2

Valid cases: 14311
Invalid: 0

Literal question

MPCE Code

Record Type (Record_Type)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 2

Valid cases: 14311
Invalid: 0

Literal question

Record Type

Block 9.2 Item Code (B9_2_q1)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Discrete
Format: character
Width: 3

Valid cases: 14311
Invalid: 0

Literal question

Block 9.2 Item Code

Number (B9_2_q3)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Continuous
Format: numeric
Width: 2
Decimals: 0
Range: 0-99

Valid cases: 14311
Invalid: 0
Minimum: 0
Maximum: 99
Mean: 0.4
Standard deviation: 1.5

Literal question

How many items are in use on the date of survey?

Interviewer instructions

The number in use on the date of survey of each item of durable goods will be entered in this column. It will also include those items which may not be in use temporarily but are likely to be put into use after repair/necessary servicing.

Value in cash (B9_2_q4)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Continuous
Format: numeric
Width: 7
Decimals: 2
Range: 0-9300

Valid cases: 14311
Invalid: 0
Minimum: 0
Maximum: 9300
Mean: 121.1
Standard deviation: 448.5

Literal question

Value in cash (B9_2_q4)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

How much money was spent by the household for construction & repair of the item in the last 30 days?

Value in cash and kind (B9_2_q5)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Continuous	Valid cases: 14311
Format: numeric	Invalid: 0
Width: 7	Minimum: 0
Decimals: 2	Maximum: 9300
Range: 0-9300	Mean: 122
	Standard deviation: 448.8

Literal question

How much was spent by the household in cash & kind for construction & repair of the item in the last 30 days?

Multiplier Combined (Wgt_Combined)

File: Block 9pt2 - Monthly household expenditure for construction & repair of durables

Overview

Type: Continuous	Valid cases: 14311
Format: numeric	Invalid: 0
Width: 8	Minimum: 13.1
Decimals: 2	Maximum: 10978.6
Range: 13.13-10978.56	Mean: 1144.3
	Standard deviation: 730.4

Description

Combined multiplier generated by NSSO

Multiplier Sub-sample (Wgt_SubSample)
