# **Household Ownership Holdings in India, 2003**

**NSS 59<sup>th</sup> Round  
(January–December 2003)**

**National Sample Survey Organisation  
Ministry of Statistics and Programme Implementation  
Government of India**

**November 2006**

# Preface

The Land and Livestock Holdings survey carried out in the 59<sup>th</sup> round (January-December 2003) by the National Sample Survey Organisation (NSSO) is the sixth in the series of similar surveys conducted so far. The objective of these surveys has been to generate basic quantitative information on the agrarian structure of the country, which is relevant to formulation of sound land policy. In the 59<sup>th</sup> round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas. Particulars of land owned, land leased out and leased in, and types and terms of lease were collected for study of ownership of holdings. For the operational holdings, data were collected on size, composition, tenurial form, land use, extent of irrigation, fragmentation of holding, drainage facilities and other related aspects. An inventory of livestock owned by the household on the date of survey was also collected.

The present report is the last of four reports planned to be brought out on the basis of data collected from the Land and Livestock Holdings Survey. The earlier reports deal with number, size distribution, and other aspects of operational holdings, and ownership of livestock. The present report deals with household ownership holdings during the year 2003. It presents different facets of the household ownership holdings and shows the estimates of land owned, land leased in and leased out, the types and terms of lease and different patterns of land use classified according to sizes of the ownership holdings.

Like all regular NSS surveys, the geographical domain of the present survey covered practically the whole of India. Information was collected from a sample of 52,265 rural households and 29,893 urban households spread over 6,638 villages and 3,764 urban blocks through personal interviews. Each sample household was visited twice during the period of survey with a gap of four to eight months.

Chapter One of this report serves as the introduction. Chapter Two explains the concepts and definitions adopted in the survey. Chapter Three summarises the major findings of the survey on household ownership holdings. It also briefly traces the changing aspects of household ownership holdings and their size distributions over the last four decades. Appendix A gives the detailed survey estimates at State/UT and all-India level. Appendix B explains the sample design and estimation procedure used for the survey. The schedules of enquiry used in Visit 1 and Visit 2 of the survey are given in Appendix C.

The Survey Design and Research Division of the NSSO undertook the development of survey methodology and survey instruments as well as drafting of the report. The fieldwork was carried out by the Field Operations Division of NSSO while the data processing and tabulation work was handled by the Data Processing Division of NSSO. The Coordination and Publication Division of NSSO coordinated various activities pertaining to the survey.

I am thankful to the Chairman and the Members of the Working Group for the NSS 59<sup>th</sup> round for their valuable guidance at various phases of work from designing of the schedules of enquiry to the preparation of this report. I am also thankful to the Chairman and the Members of the then Governing Council of NSSO, for providing technical guidance at various stages of survey work.

I hope, the report will be useful to the planners and policy makers.

Comments and suggestions from readers will be most welcome.

New Delhi  
November 2006

Vishnu Kumar  
Director General and Chief Executive Officer  
National Sample Survey Organisation

# Highlights

---

## Household Ownership Holdings in India, 2003

- The estimated total area owned by the households in the rural sector during the year 2003 was 107.23 million hectares. The corresponding area in the urban sector was 7.21 million hectares only.
- About 10% of the rural households were reported to be landless, i.e. owning land either nil or less than 0.002 ha. The corresponding urban share was 49%.
- The per-household average area of land owned in the rural sector for the year 2003 came to 0.725 ha, about 27% less than the corresponding figure in 1992.
- The average area of land owned per household in the rural sector was highest in Rajasthan (2.077 ha) and lowest in Kerala (0.234 ha).
- The percentage of landless households in the rural sector was highest in Sikkim (31%), followed by Arunachal Pradesh (22%), Maharashtra (18%) and Tamil Nadu (17%).
- The share of marginal holdings (area less than or equal to 1.000 ha) in the rural areas was 80% in the year 2003 compared to 72% in 1992 and 67% in 1982.
- In the rural areas, the share of land owned by different social groups was 11% for ST, 9% for SC, 44% for OBC and 36% for Others. The per-household land area owned by them was 0.767 ha, 0.304 ha, 0.758 ha and 1.003 ha respectively.
- Of the total land area under ownership holding in the rural sector, 15% constituted of sand, 21% of loam, 7% of silt, 41% of light clay and 13% of heavy clay.
- In the rural sector about 2.8% households reported leasing out of land while 11.5% households reported leasing in of land. Among the households leasing in, 40% contracted for share of produce, 31% for fixed rent in cash and 15% for fixed rent in kind.

Table No.	Title	Page
1R/1U	Per 1000 distribution of households and average area owned by size class of ownership holding separately for each social group (Rural / Urban)	A-1 – A-27
2R/2U	Per 1000 distribution of households reporting leasing-out of land and average area of such land per reporting household by size class of ownership holding for each social group (Rural / Urban)	A-28 – A-54
3R/3U	Per 1000 distribution of households reporting leasing-in of land and average area of such land per reporting household by size class of ownership holding for each social group (Rural / Urban)	A-55 – A-81
4R/4U	Per 1000 distribution of households by size class of holding of owned land other than homestead (Rural / Urban)	A-82 – A-83
5R/5U	Average area (ha) per household by size class of holding of owned land other than homestead (Rural / Urban)	A-84 – A-85
6R	Per 1000 distribution of households over household type for each size class of ownership holding (Rural)	A-86 – A-100
7R	Percentage distribution of area owned by type of land for each size class of ownership holding (Rural)	A-101 – A-129
8R	Proportions of households leasing in land of specific types among households leasing in land and average area of land leased in by type (Rural)	A-130 – A-158

## Appendix A (contd.)

Table No.	Title	Page
9R	Number per 1000 of households reporting leasing-in of land (excluding homestead) by terms of lease for each size class of ownership holding (Rural)	A-159 – A-187
10R	Number per 1000 of households reporting leasing-in of land (excluding homestead) by type of lessor for each size class of ownership holding (Rural)	A-188 – A-202
11R	Number per 1000 of households reporting land (excluding homestead) possessed but not owned by type of possession for each size class of ownership holding (Rural)	A-203 – A-217
12R	Average area of land (excluding homestead) possessed but not owned per household reporting such land for each type of possession by size class of ownership holding (Rural)	A-218 – A-232
13R	Percentage distribution of area leased out (excluding homestead) by terms of lease for each size class of ownership holding (Rural)	A-233– A-261
14R	Percentage distribution of area leased in (excluding homestead) by terms of lease for each size class of ownership holding (Rural)	A-262 – A-290
15R/15U	Average household size by broad size class of household ownership holding (Rural / Urban)	A-291 – A-292
16R	Per 1000 distribution of plots by soil type for each size class of ownership holding (Rural)	A-293 – A307

# Chapter One

## Introduction

1.0 The survey on Land and Livestock Holdings carried out in the 59<sup>th</sup> round (January-December 2003) of the National Sample Survey Organization (NSSO) is the sixth in the series of similar surveys conducted by the NSSO. The objective of these surveys has been to generate basic quantitative information on the agrarian structure of the country, which is relevant to land policy. The first survey on land holdings was taken up by the NSS in its 8<sup>th</sup> round (July 1954 - April 1955) as part of the World Agricultural Census initiated by the Food & Agricultural Organisation (FAO) of the United Nations. In this survey, information on agricultural holdings was collected primarily to meet the requirements of the FAO. In addition, information on household ownership holdings was collected to provide the policy framers with the much-needed data for formulating land reforms policy for the country. A similar survey was conducted again in the 16<sup>th</sup> (July 1960-August 1961) and 17<sup>th</sup> (September 1961-July 1962) rounds of the NSS as a part of the World Agricultural Census Programme of 1960. Since then, NSSO has been regularly conducting land holding surveys every ten years or so. The third land holdings survey of NSSO during its 26<sup>th</sup> round (July 1971-June 1972), was conducted simultaneously with a survey on Debt and Investment at the instance of the Reserve Bank of India. Since then, this has been a regular feature of the rounds in which land and livestock holdings surveys have been conducted: the 37<sup>th</sup> round (January-December 1982), the 48<sup>th</sup> round (January-December 1992), and the present one.

1.1 In this round, 6760 villages formed the Central sample (surveyed by NSSO field-officials) in the rural sector. Of these, 6638 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 3824 Urban Frame Survey (UFS) blocks of which 3764 were surveyed. This report is based on the estimates obtained from the Central sample alone. Eight households were selected for survey from each sample village and urban block. The actual number of households surveyed was 52,265 in the rural sector and 29,893 in the urban sector. The Central sample covered the whole of the Indian Union except (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of any bus route and (iii) villages in Andaman and Nicobar Islands, which remain inaccessible throughout the year.

1.2 There were four subjects of enquiry in the 59<sup>th</sup> round of NSS: Land and Livestock Holdings (Sch.18.1), Debt and Investment (Sch.18.2), Consumer Expenditure (Sch.1.0), and Situation Assessment Survey of Farmers (Sch.33). Only the Situation Assessment Survey was restricted to rural India; the others covered both rural and urban areas of the country. The survey period of the 59<sup>th</sup> round was from January to December, 2003. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August, 2003 (visit 1) and the other during September to December 2003, (visit 2). Accordingly, each sample first stage unit (village or block) was visited twice by the investigator to whom it was allotted.

Canvassing of the listing schedule (Sch. 0.0) and selection of the sample households was carried out in the visit 1 only. The survey period was further divided into two sub-rounds. Sub-round 1 consisted of the first half of the period of each visit while sub-round 2 consisted of the remaining period. Equal number of sample FSU's were allotted to each sub-round and an FSU was normally surveyed in the sub-round to which it was allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

1.3 Besides household and demographic characteristics, information on various aspects of ownership and operational holdings had been collected in this survey in both rural and urban sectors. Particulars of land and livestock owned, land leased out and leased in, types and terms of lease, major types of land use, soil types etc. formed the main body of information for study in this survey.

1.4 The present report is the last of a series of four reports being brought out on the basis of the Land and Livestock Holdings Survey. The first report dealt with livestock ownership and the next two reports with number, area and other aspects of operational land holdings. The present report deals with the Household Ownership Holdings during the period 2003. It presents different facets of the household ownership holdings and shows the estimates of land owned, land leased in and land leased out, and also the types and terms of lease etc classified according to sizes of the ownership holdings of the households. The data on land owned, leased in and leased out by the household were collected only in visit 1. Therefore, the results presented in this report are based on the data collected during visit 1.

1.5 Detailed estimates at State and Union Territory level are presented in Appendix A of the report. The sample design and estimation procedure are explained at length in Appendix B. A facsimile of the schedule of enquiry (Schedule 18.1) is included as Appendix C. Concepts and definitions followed in the survey are set out in Chapter Two and the results of the survey are presented in brief in Chapter Three: Summary of Findings.

1.6 Since estimates based on very small samples may not be reliable, it was decided to release State-level estimates if the total number of sample households for the State was at least 300 in the rural as well as in the urban sector. As a consequence, for the Tables 1 to 16 in Appendix A, separate figures for the States of Delhi and Goa, and for all the UT's, could not be brought out in the rural sector. Similarly, for the urban sector, separate figures for the States of Arunachal Pradesh, Goa, Himachal Pradesh, Meghalaya, Nagaland, Sikkim and Uttaranchal, as well as for all the UT's, could not be brought out. However, figures for all the UT's have been clubbed and shown under the head 'Group of UT's' in both rural and urban sectors. It may be noted that data from all the States and UT's have been used in building up of all-India estimates.

## Chapter Two

### Concepts and Definitions

2.0 Before discussion on the main findings on Household Ownership Holdings, the concepts and definitions of different terms used in the survey are given below:

2.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. By "normally" is meant, temporary visitors are excluded while temporary stay-aways are included. Thus, a son or a daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer's/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict. However, in other cases, a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage or otherwise, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in such an establishment is considered as one household only. Under-trial prisoners in jails, indoor patients in hospitals and nursing homes are excluded from listing therein, but such persons are taken into consideration for listing in their original households. However, floating population without any normal residence, foreign nationals and their domestic servants, persons in barracks of military and paramilitary forces, and members of an orphanage or rescue home or ashram or vagrant house are excluded at the time of listing of households.

2.2 **Household size:** The size of a household is the total number of persons, normally living in the household.

2.3 **Agricultural production:** The extended definition of agricultural production adopted in the survey includes in addition to crop production, activities allied to agriculture that are intensive in the use of land such as growing of fruits, grapes, nuts, seeds, tree nurseries (except those of forest trees), bulbs, vegetables and flowers both in the open and in glass houses; production of coffee, tea, cocoa, rubber, forest production in parcels of land which form part of the enumeration holding and production of livestock and livestock products, poultry and poultry products, fish, honey, rabbits, fur-bearing animals, and silk-worm cocoons.

2.4 **Ownership of land:** (i) A plot of land was considered to be owned by a household if permanent heritable possession, with or without the right to transfer the title was vested in a member or members of the household. Land held in owner-like possession under long-term (30-99 years) lease or assignment was also considered as land owned. Thus, in determining the ownership of a plot of land two basic concepts were involved, namely,

(a) Land owned by the household, i.e., land on which the household had the right of permanent heritable possession with or without the right to transfer the title, e.g., *pattadars*, *bhumidars*, *jenmons*, *bhumi-swamis*, *rayat sithibans*, etc. A plot of land may

be leased out to others by the owner without losing the right of permanent heritable possession.

(b) Land held under special conditions such that the holder did not possess the title of ownership but had the right to long-term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long-term lease for 30-99 years) was considered as being held under owner-like possession. In States where land reform legislation has provided for full proprietorship to erstwhile tenants, the latter were considered as having owner-like possession, even if they had not paid the full compensation.

(ii) Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant for which the right of ownership vests in the community. In both the cases, the tribal or other individual (tenant) was taken as owner, for in all such cases, the holder had the owner-like possession of land in question.

**2.5 Household ownership holding:** A household ownership holding includes all plots (or parts of plot) of land owned or held in owner-like possession under a long-term lease or assignment by a member of the household, whether the land is cultivatable or not. Thus a household ownership holding may include, besides cultivatable land, areas under forest, barren and unculturable land, cultivatable waste land, land put to non-agricultural uses (viz. house sties, roads etc.), land growing miscellaneous tree crops, etc.

**2.6 Lease of land:** (i) Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

(ii) Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions were not treated as "lease" for the purpose of the survey.

**2.7 Otherwise possessed land:** This was understood to mean all public or institutional land possessed by the household without title of ownership or occupancy right. The possession was without the consent of the owner. Private land (i.e., land owned by the household sector) possessed by a household without title of ownership and occupancy right was not included in this category. All private land encroached upon by the household was treated as leased-in land.

**2.8 Homestead land:** (i) Homestead of a household was defined as the dwelling house of the household together with the courtyard, compound, garden, out-house, place of worship, family graveyard, guest house, shop, workshop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling house. All land coming under homestead was defined as homestead land.

(ii) Homestead may constitute only a part of a plot. Sometimes, gardens, orchards or plantations, though adjacent to the homestead and lying within the boundary walls, may be located on a clearly distinct piece of land. In such cases, land under garden, orchard or plantation was not considered as homestead land.

2.9 **Land possessed:** Land possessed by the household is obtained by summing the land areas (in hectares) for plots owned, leased in and otherwise possessed by the household and then subtracting the land area leased out by the household.

2.10 **Land use:** The classification for land use was based on the usual status of the land and was meant for classifying land owned and land leased-in as on date of survey. The definitions of various uses of land relevant for the survey are given below:

2.10.1 **Forest:** This included all area actually under forest or land so classified under any legal enactment or administered as forest, whether state owned or private. If any portion of such land was not actually wooded but put to raising of field crops, it was treated under net sown area and not under forest. All area under social and farm forestry will be included in this class.

2.10.2 **Net sown area:** For a particular season, this consists of area sown with field crops and area under orchards and plantations counting only once the area sown more than once in the same season. The net sown area defined above has been further classified into area under orchards, plantations and seasonal crops.

(i) **Orchards:** A piece of land put to production of horticulture crops, viz. fruits, nuts, dates, grapes etc. (other than those treated as plantation crops), was regarded as an orchard, if it was at least 0.10 hectare in size or had at least 12 trees planted on it. In the case of such fruit trees where distance between the trees was quite large, say more than six meters, as in the case mangoes, the orchard was defined according to the minimum number of 12 trees planted in it. In case, where the distance was less than six meters as in the case of bananas, papayas, grape vines etc., the orchard was defined on the basis of the minimum area of  $1/10^{\text{th}}$  of an hectare.

(ii) **Plantation:** Area devoted to production of plantation crops, viz. tea, coffee, cashew nut, pepper, coconut, cardamom, rubber, cocoa, arecanut, oil palm, clove and nutmeg, was treated as area under plantation. The size restriction given for orchards was also applicable for plantations for the purpose of the survey.

(iii) **Area under seasonal crop:** All land under net sown area not coming under orchards or plantations was taken as area under seasonal crops.

Sometimes, net sown area consists of a piece of land put to a combination of the above three uses. In such cases, the use to which the major area of the piece of land was put was treated as the 'use' of the piece of land.

2.10.3 **Current fallow:** This comprises cultivable area which is kept fallow during the current agricultural year. If any seedling area in the current agricultural year is not cropped again in the same year, it is also treated as current fallow.

2.10.4 **Other fallow:** All pieces of land which were taken up for cultivation in the past, but are temporarily out of cultivation for a period of more than one agricultural year but not more than five years, including the current agricultural year, are classified under other fallow.

2.10.5 **Land put to non-agricultural uses:** This included all land occupied by buildings, path etc. or under water (tanks, wells, canals etc.) and land put to uses other than agricultural uses. For the purpose of this survey, this class of land was further divided into two classes.

- (a) Water bodies: All land which are perennially under water was defined as water bodies, provided that no crop was raised on them.
- (b) Other non-agricultural uses: All land put to other non-agricultural uses. Viz. buildings, roads, railways, paths etc. were classified under land put to other non-agricultural uses.

2.10.6 **Other uses:** This included all land coming under rest of the classes of standard nine-fold classification, viz., “culturable waste”, “miscellaneous tree crops and groves not included in net sown area”, “permanent pastures and other grazing land” and “barren and unculturable waste”.

2.10.7 **Drainage facilities:** A plot of land was considered to have drainage facility if there existed some method of removal of excess water from the surface of land, from the upper layers of soil or sub-soil by artificial means for the purpose of making (a) non-producing wet land productive and (b) producing wet land more productive. Natural drainage, i.e. normal outflow of excess water from the plot of land by virtue of its position, was not considered as drainage facility.

2.11 **Irrigation:** Irrigation was considered as a device of purposively providing land with water, other than rain water, by artificial means for crop production.

2.12 **Terms of lease:** The various terms of lease on which the area was leased out to the lessee households were:

- (1) For fixed money (2) for fixed produce (3) for share of produce (4) for service contract (5) for share of produce together with other terms (6) under usufructuary mortgage (7) from relatives under no specified terms and (8) under other terms.

It may be noted here that leasehold under crop-sharing basis meant that the owner of land received a stipulated share of the produce but he did not participate in the work nor did he manage or direct or organize the agricultural operations on the plot of land which he had leased out. Leasehold under service contract meant that an employer gave some land to an employee for cultivation in lieu of the services provided by him under the condition that the land could be retained so long as the employee continued to serve the employer and no other specific terms of lease was contracted. The term by which the mortgagor retained the ownership of land till the foreclosure of the deed but the possession of the land was transferred to the mortgagee would be considered as leasing-out under usufructuary mortgage. Sometimes land owned by a household is looked after and used by a close relative. For example, a person staying away from his village may own a piece of land in the village which is looked after and used by his brother's household. All such land owned by the household but looked after and used by some relative's household, under no contract of payment of any kind to the owner, was treated as leasing-out to 'relatives under no specified terms'. Lease on terms other than those specified for types (1) to (7) stated above was treated as 'under other terms'. All rent free leases, other than those from 'relatives under no specified terms' was treated as lease 'under other terms'.

2.13 **Crop seasons (Kharif and Rabi):** Generally, the agricultural year is divided into two main crop seasons, Kharif and Rabi. The crop season is identified by the months of harvesting of the crop during the year. In a broad sense, crops which are harvested in the period from July to December are known as Kharif crops, while Rabi crops are those which are harvested during January to June. For the purpose of the survey, Kharif season included

both early Kharif (i.e. autumn) and late Kharif (i.e. winter). Similarly, the Rabi season included both Rabi and Zaid Rabi (i.e. summer). The harvesting months of the early Kharif and the late Kharif seasons may extend over July to October and November to January, respectively. Again, the crops of Rabi and Zaid Rabi seasons may be harvested during December to April and May to July, respectively. However, there may be further departure from this general rule in case of some crops grown in certain regions. Therefore, the general policy is to ascertain the crop season from the farmer who has harvested the crop. As a general guideline, the crop seasons for some principal crops are given as shown below:

<b>crop</b>	<b>season</b>	<b>crop</b>	<b>season</b>
Rice	Kharif,Rabi (summer)	Sugarcane	Kharif
Wheat	Rabi	Sesamum	Kharif, Rabi
Jowar	Kharif, Rabi	Groundnut	Kharif
Bazra	Kharif	Linseed	Rabi
Maize	Kharif	Castor	Kharif
Ragi	Kharif	Cotton	Kharif
Barley	Rabi	Tobacco	Kharif
Gram	Rabi	Jute	Kharif

However, it was ensured that all the crops, whether principal or not, grown during the agricultural year 2002-03 were duly considered in either Kharif or Rabi season. For land without crop, July to December 2002 was treated as Kharif season and January to June 2003, as Rabi season.

**2.14 Social group:** There are in all four social groups, namely, scheduled caste, scheduled tribe, other backward class and others. Those who do not come under any one of the first three social groups are assigned to 'others' meant to cover all other categories. In case different members of a household belong to different social groups, the group to which the head of the household belongs is considered as the 'social group' of the household.

**2.15 Number of villages and blocks surveyed:** Table A shows, State/UT-wise, the number of villages/blocks allotted for survey and the number actually surveyed, and the number of sample households in which Schedule 18.1 was canvassed. It may be noted that 93 sample villages falling in disturbed areas – 77 in Jammu & Kashmir and 16 in Assam – could not be surveyed. Apart from this, 29 villages – 8 in Tamil Nadu, 2 in Arunachal Pradesh and 19 in the Andaman & Nicobar Islands – became casualty as they could not be surveyed within the deadline set for Visit 1. Similarly, 60 urban blocks – 47 falling in disturbed areas of Jammu and Kashmir, 8 in Arunachal Pradesh and 5 in Tamil Nadu could not be surveyed.

**Table A: Number of villages/blocks allotted and surveyed and number of households surveyed**

State/UT	no. of villages		no. of blocks		sample households	
	allotted	surveyed	allotted	surveyed	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Andhra Pradesh	432	432	244	244	3431	1946
Arunachal Pradesh	68	66	36	28	523	224

# Chapter Three

## Summary of Findings

3.0 The objective of the Land and Livestock Holdings Survey of 2003 was to assess various aspects of land ownership holdings and operational holdings – the latter with reference to the agricultural year 2002-03 – as well as livestock ownership across operational land holding size classes in both rural and urban sectors of the country. Data collected in this survey included particulars of land owned, land leased out and leased in, types and terms of lease, and the stock of cattle, buffalo, poultry and other livestock on the date of survey, besides information on household characteristics such as religion, social group, occupation and industry, and demographic characteristics of the members of the households.

3.0.1 The present report brings out various facets of the household ownership holdings of the country in both rural and urban sectors. It covers different aspects of ownership holdings in terms of alternative uses to which land is put, types and terms of lease, and their variation over size classes of ownership holdings. It also brings out the estimates of area under household ownership holdings, average size of holding, the number and proportion of landless households etc. The detailed results of the report are shown in Tables 1 to 16 of Appendix A. Some important findings emerging from the survey on household ownership holdings are described in this chapter. The findings are organised as follows:

- Household ownership of land
- Composition of ownership holdings by social group
- Land use pattern in ownership holdings
- Incidence and extent of tenancy of land

### 3.1 Household ownership of land

3.1.1 Land, with permanent heritable possession, with or without right to transfer the title, was considered as owned land. The land held in owner-like possession under a long-term lease or assignment (e.g. village land possessed by a tribal household as per traditional tribal rights or community land customarily operated by a tenant for a long period) was also treated as land owned. A household ownership holding includes all plots (or parts of plot) of land owned by a member of the household, whether the land is cultivatable or not. Thus a household ownership holding may include, besides cultivatable land, areas under forest, barren and unculturable land, cultivatable waste land, land put to non-agricultural uses (viz. house sites, roads etc.), land growing miscellaneous tree crops, etc.

3.1.2 The estimates of area under household ownership holdings, average size of holding, and number and proportion of landless households are presented in Statement 1. Households owning no land or land less than 0.002 hectares are termed as landless households. The estimated area owned by the rural households was 107.23 million hectares (mha) and that owned by the urban households was 7.21 million hectares. The share of urban households in the total land ownership was only 6.3%. The average size of rural holdings was 0.725 hectare and that of urban holdings was 0.130 hectare. For the households excluding the landless households, these averages turned out as 0.806 and 0.252 hectare in the rural and urban areas respectively. A large number of households owned practically no land or a very

small holding. While 10% of the rural households were reported to be landless, in the urban sector the share was almost 49%. In absolute terms, about 15 million households were found to be landless in rural India.

**Statement 1: Estimated total area and average area owned, and proportion of landless households in rural and urban areas**

<b>All-India</b>		
item	rural	urban
(1)	(2)	(3)
1. estimated no. of households ('000)	147,838	55,508
2. estimated no. of landless households ('000)	14,836	26,928
2.1 percentage of landless households	10.0	48.5
3. estimated total area owned ('000 ha)	107,228	7,212
4. average area owned per household (ha)		
a) including landless households	0.725	0.130
b) excluding landless households	0.806	0.252

**3.1.1 Trends in household ownership of land: all India**

3.1.1.1 Data on ownership of land are being collected regularly by the NSSO since its 8<sup>th</sup> round (1954-55). So far, including the present one, six land holding surveys have been conducted. The results of these surveys contribute a fairly comparable set of data over quite a long period of time. For the NSS 8<sup>th</sup> round, a plot of land was considered to be owned by a member of the household only if he/she held it with permanent heritable possession, with or without right to transfer the title. The coverage of owned land remained unaltered through the rounds, except for one change introduced in the definition of owned land. The land held in owner-like possession under a long-term lease or assignment became a part of the land owned by the household since the 17<sup>th</sup> round (1961-62). In that round the terms 'assignment' or 'long-term lease' covered only those given by the Government. In the 26<sup>th</sup> round (1971-72), owner-like possession was elaborated to cover the following types of possession as well:

- (a) land held under perpetual basis, hereditary tenure and long-term lease (ranging from 30 to 99 years),
- (b) land held by tribals under traditional right from local chieftains, village councils or district councils,
- (c) land held by tenants who were granted full proprietary rights by the government under land reforms legislation, and
- (d) land held by tenants while ownership rights were with the community.

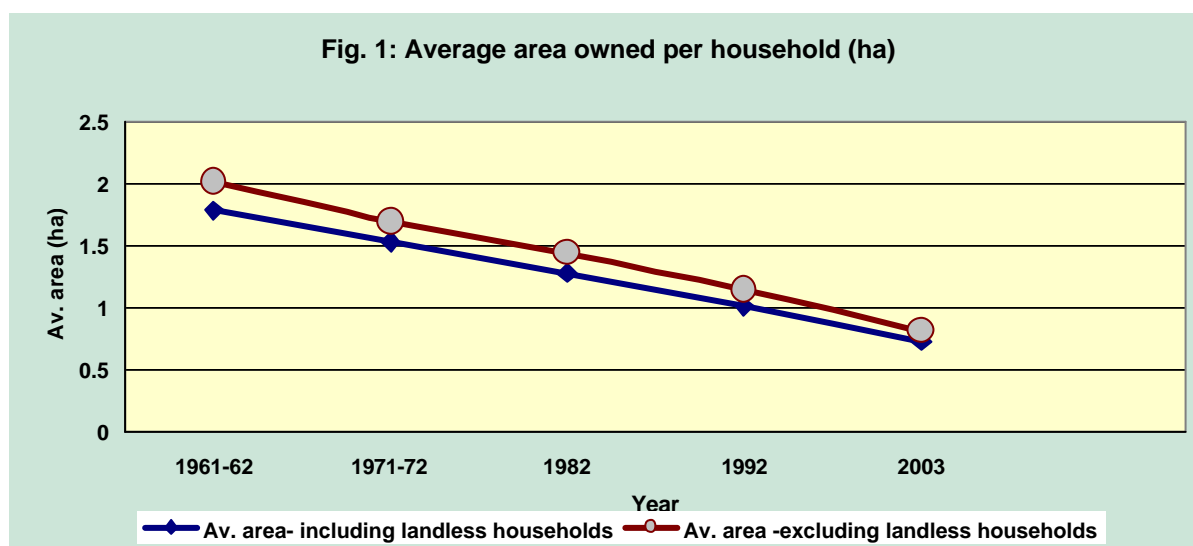

These types of possession, however, account for a very small share of area owned. But for the coverage of owner-like possession, the coverage of the term 'ownership' has remained unaltered since the 26<sup>th</sup> round.

3.1.1.2 The basic estimates relating to ownership of land obtained from the above surveys are given in Statement 2. The estimates for the rural sector are discussed here. The sizes of the samples on which the estimates are based are also provided in the statement. It may be observed that the total area owned (128.7 mha), as estimated in 1961-62, had fallen to 119.6 mha in 1971-72 – a fall of about 7 percent. The 1982 survey estimate of 119.7 mha of land under the ownership of rural households was quite close to the estimate of 1971-72. The definition of ownership of land remaining the same for the surveys of 1961-62, 1971-72 and 1982, there is no apparent reason for the decrease in area owned except that some rural land might have been merged in urban land due to urbanisation over the years.

**Statement 2: Changes in household ownership of land during 1961-62 to 2003**

<b>All-India</b>	<b>Rural</b>				
item	1961-62 (17 <sup>th</sup> round)	1971-72 (26 <sup>th</sup> round)	1982 (37 <sup>th</sup> round)	1992 (48 <sup>th</sup> round)	2003 (59 <sup>th</sup> round)
(1)	(2)	(3)	(4)	(5)	(6)
1. Estimated area owned (000 ha)	128,734	119,636	119,736	117,354	107,228
2. Average area owned per household (ha)					
(a) including landless households	1.78	1.53	1.28	1.01	0.73
(b) excluding landless households	2.01	1.69	1.44	1.14	0.81
3. Percentage of landless households	11.7%	9.6%	11.3%	11.3%	10.0%
4. Number of sample villages	3486	4547	3692	4231	6638
5. Number of sample households	53138	35947	29089	33289	52265

3.1.1.3 Figure 1 below shows the average area owned per household in hectares, when (i) landless households are included, as well as when (ii) landless households are excluded.

3.1.1.4 Statement 2 reveals no significant change in the percentage of landless households since 1961-62, except that it was slightly lower (10%) in 1971-72 as well as in 2003. With the progressive increase in the number of rural households, decline in average area owned is

inevitable. The increasing pressure of rural population on the limited land base is reflected in the steady decline in the average area owned per household over the years. In 1961-62, the average area owned per household was 1.78 hectares. Gradually and steadily, it came down to 0.73 hectare in 2003. Excluding the landless households, the average area owned was estimated to be 0.81 hectare in 2003, which is nearly 40% of the estimate (2.01 hectares) obtained in 1961-62.

### 3.1.2 Changes in the pattern of distribution of ownership holdings : all-India

3.1.2.1 To examine whether there has been any significant change in the agrarian structure, apart from the observed decline in average size of holdings, it is necessary to study the nature and extent of temporal variations in the size distribution of ownership holdings. Statement 3 gives the cumulative percentage distribution of rural households and area owned by size class of ownership holdings from all the Land Holding Surveys of NSS since 1961-62. It is seen from the statement that the broad, highly skewed nature of size-distribution of ownership holdings has by and large, remained unchanged over time, notwithstanding the progressively downward shift in the distribution. The size distribution of ownership holdings in India is characterized by predominance of landless households and marginal holders. During 2003, the marginal holdings (less than or equal to 1 ha) and the landless (below 0.002 ha) constituted about 80% of the rural households but owned only 23% of total area. The medium (owning 4 to 10 hectares of land) and large holders (owning more than 10 hectares of land) accounted for only 3.6% of the households but had a combined share of about 35% in the total land owned by all households in 2003. Gini's coefficient of concentration of ownership of land holdings, computed on the basis of data for the size classes shown in Statement 3, came to about 0.73, 0.71, 0.71, 0.71 and 0.74 in 1961-62, 1971-72, 1982, 1992 and 2003 respectively. The Lorenz curves drawn for the five years are shown in Figures 2.1 to 2.5.

All-India (Rural)**

3.1.2.2 Over a period of four decades since 1961-62, the size distribution of ownership holdings has progressively shifted downwards. The proportion of marginal holders has risen from 66% in 1961-62 to 80% in 2003 and the proportion of small holders (owning 1 to 2 hectares), has increased from 9% to 11%. This rise in the proportion of marginal and small holders has been accompanied by a steady decline in the proportion of medium and large holders.

3.1.2.3 Figure 3 shows the percentage of households and area owned by households belonging to different size classes of ownership holding.

### 3.1.3 Household ownership of land: inter-State comparison

3.1.3.1 The average size of ownership holdings and percentage of landless households for different States are given in Statement 4 for rural India. For the States, the average area owned per household varied over a wide range, with Kerala showing the lowest value (0.23 ha) and Rajasthan reporting the highest (2.08 ha). Besides Kerala, Tripura (0.26 ha), West Bengal (0.30 ha), Tamil Nadu (0.34 ha), Uttaranchal (0.37 ha) and Bihar (0.38 ha) were the States that reported an average area less than 0.40 hectare. The national average was 0.73 ha. In addition to Rajasthan, six more States reported average holding size exceeding one hectare. They were Madhya Pradesh (1.31 ha), Arunachal Pradesh (1.17 ha), Mizoram (1.11 ha), Chhattisgarh (1.06 ha), and Maharashtra and Gujarat (both 1.02 ha).

**Statement 4: State-wise average size of household ownership holdings and percentage of landless households, 2003**

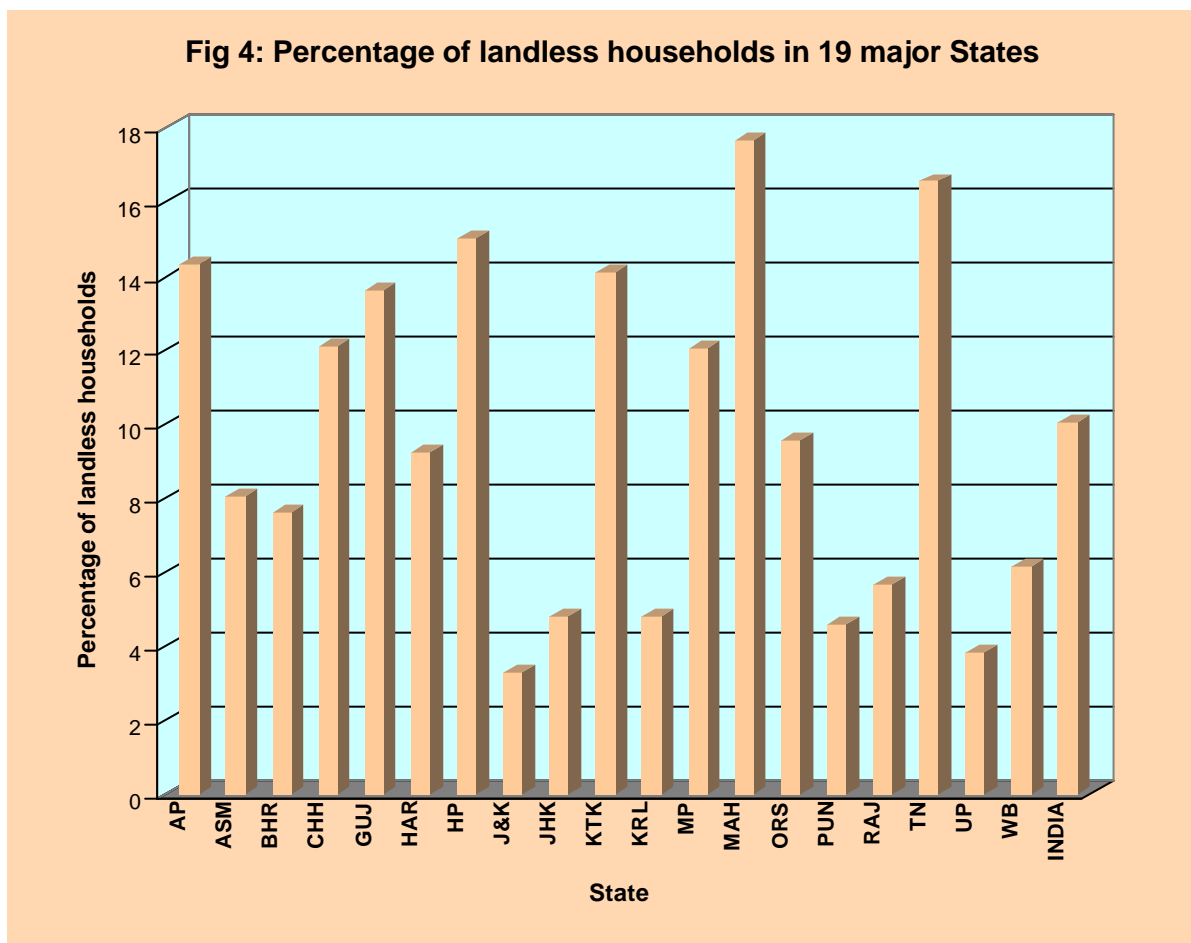

**Rural**

State	average area (ha) owned per household	percentage of landless households	average area (ha) owned per household excl. landless households
(1)	(2)	(3)	(4)
Andhra Pradesh	0.620	14.33	0.724
Arunachal Pradesh	1.173	21.59	1.496
Assam	0.551	8.05	0.599
Bihar	0.376	7.60	0.407
Chhattisgarh	1.064	12.09	1.210
Gujarat	1.016	13.60	1.176
Haryana	0.833	9.21	0.917
Himachal Pradesh	0.560	15.00	0.659
Jammu & Kashmir	0.794	3.29	0.821
Jharkhand	0.560	4.80	0.588
Karnataka	0.979	14.09	1.140
Kerala	0.234	4.80	0.246
Madhya Pradesh	1.310	12.05	1.490
Maharashtra	1.021	17.66	1.240

Rajasthan	2.077	5.65	2.201
Sikkim	0.447	30.67	0.645
Tamil Nadu	0.338	16.55	0.405
Tripura	0.259	8.69	0.284
Uttar Pradesh	0.618	3.82	0.643
Uttaranchal	0.371	10.64	0.415
West Bengal	0.295	6.15	0.314
Group of UTs	0.193	40.25	0.323
<b>all-India</b>	<b>0.725</b>	<b>10.04</b>	<b>0.806</b>

3.1.3.2 The average size discussed so far is based on all households, including the landless. When we exclude landless households in calculating the average holding size per household, Karnataka is added to the list of seven States mentioned in paragraph 3.1.3.1, having average holding size exceeding 1 hectare.

3.1.3.3 The all-India proportion of landless households was 10.0%. The proportion was much larger in the Group of UTs (40%) and Sikkim (31%). Apart from these, landlessness was high in Arunachal Pradesh (22%), Maharashtra (18%), Tamil Nadu (17%) and Himachal Pradesh (15%).

3.1.3.4 Figure 4 shows the percentage of landless households in 19 major States.

### 3.1.4 Changes in the distribution of ownership holdings: inter-State comparison

3.1.4.1 Statement 5 gives the percentage distributions of households and area owned by broad size-class or “category” of holding in 17 major States and all-India for the years 2003, 1992, 1982 and 1971-72, as obtained from the NSS 59<sup>th</sup>, 48<sup>th</sup>, 37<sup>th</sup> and 28<sup>th</sup> round Land Holding Surveys respectively. The size classes of the detailed classification have been merged to form 5 broad size classes or categories along the lines adopted in the Agricultural Census of India. The 5 broad size classes are as follows:

<b>category of holding</b>	<b>size</b>
marginal	less than or equal to 1.000 hectares
small	more than 1.000 but less than or equal to 2.000 hectare
semi-medium	more than 2.000 but less than or equal to 4.000 hectares
medium	more than 4.000 but less than or equal to 10.000 hectares
large	more than 10.000 hectares

3.1.4.2 Considering the country as a whole, the large and medium holdings, at the top 10 per cent bracket, owned 54% of the total land in 1971-72, their share declining to 35% in 2003 while their proportion declined to 4%. At the bottom, the proportion of marginal holdings increased from 63% in 1971-72 to 80% per cent in 2003, while the proportion of area under marginal holdings rose from about 10% in 1971-72 to 23% in 2003. In fact, the proportion of marginal holdings to total number of holdings increased in all the States during the last decade. An increasing trend in the percentage of area owned by marginal households is also observed in all the major States. The decline in the shares of the top three classes, both in number and area of ownership holdings, is noticeable in practically all the major States, though the pace may vary.

3.1.4.3 The general feature that emerges from the distributions given in Statement 5 is that there is a rise in the percentage of households in the lowest category, and a decline in the percentage of households in the categories of semi-medium and upwards. Only in respect of the small and semi-medium holders can some amount of inter-State variation, both in magnitude and direction of change be observed. There is no doubt that a declining trend is present in the proportion of small holders in all the States. The proportion of area under small holdings reveals much more varying trends over the states. Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Karnataka, Punjab, Maharashtra, Rajasthan and Uttar Pradesh reported perceptible rise in proportion of area under small holdings during the period 1992 to 2003. This was in contrast to the trend observed in the proportion of small holdings. In the proportion of area under semi-medium holdings, on the other hand, increased marginally in Madhya Pradesh and Maharashtra only. The impact of population growth is evident from the nature of the temporal variations in the pattern of distribution of ownership holdings observed for all the major States.

3.1.4.4 The results presented in Statement 6 below reveal that the percentage of landless households as estimated by the present (2003) survey (10 per cent) is not very different from the estimated proportion for 1971-72, more than three decades ago. However, both the 37<sup>th</sup> and the 48<sup>th</sup> round surveys (estimates for 1982 and 1992) gave a higher estimate, namely, 11.3 per cent.

**Statement 6: Changes in proportion of landless households**

State	percentage of landless households			
	1971-72	1982	1992	2003
	(1)	(2)	(3)	(4)
Andhra Pradesh	7.0	11.9	11.9	14.3
Assam	25.0	7.5	13.4	8.1
Bihar <sup>1</sup>	4.3	4.1	8.6	7.6
Gujarat	13.4	16.8	16.3	13.6
Haryana	11.9	6.1	3.7	9.2

West Bengal	9.8	16.2	11.0	6.2
<b>all India</b>	<b>9.6</b>	<b>11.3</b>	<b>11.3</b>	<b>10.0</b>

<sup>1</sup>includes Jharkhand    <sup>2</sup>includes Chhattisgarh    <sup>3</sup>includes Uttaranchal

### 3.1.5 Per capita ownership holding: all India

3.1.5.1 Statement 7 gives average size of holding per household, average household size and per capita holding by size class of ownership holdings, at the all-India level. It is seen that the overall average of household size was 5.0 and the per capita holding was about 0.15 hectare. For the size classes below 2.00 hectare, size of holding per household was close to the mid-point of the size class. In the higher size classes, it was found to be closer to the lower limit. It was 6.0 hectares for the size class '5.00-7.50', 8.5 hectares for the size class '7.50-10.00' and 31.0 hectares for the open-ended class '20.00 & above'.

3.1.5.2 It is seen that the average household size increases steadily from 3.3 for the 'nil' class to 11.3 for the highest class '20.00 & above'. The per capita holding, therefore, increases at a much slower rate than the average household holding over the size classes.

**Statement 7: Average household size and per capita holding by size class of ownership holding, 2003**

<b>All-India</b>	<b>Rural</b>

### 3.2 Number and area of ownership holdings by social group

3.2.1 Statement 8 provides estimates generated from the present survey of the absolute and percentage distribution of households and of total area owned over different social groups, as well as average area owned by households of different social groups, separately for rural and urban sectors at all-India level. The State-wise details are shown in Tables 1R and 1U of Appendix A.

3.2.2 It is observed that in the rural sector, 10.6% households belonged to ST, 21.6% to SC, 41.6% to OBC and 26.3% to Others. The corresponding shares of land owned were 11.2% for ST, 9.0% for SC, 43.5% for OBC and 36.3% for Others. That is, in the context of ownership of land, SC community fared worse in comparison with other social groups. This fact is clearer when we compare average area owned per household belonging to different social groups. It is observed that average area owned per household was the lowest at 0.304 ha for SC, followed by 0.758 ha for OBC, 0.767 ha for ST, 1.003 ha for Others and 0.725 ha for all social groups taken together.

**Statement 8: Distribution of households and land owned, and average area of land owned per household, by social group, 2003**

<b>All-India</b>					<b>Rural</b>
characteristic	ST	SC	OBC	Others	all*
(1)	(2)	(3)	(4)	(5)	(6)
1. estimated no. of hhs (in 000)	15592	31908	61513	38816	147838
2. percentage of hhs	10.55	21.58	41.61	26.26	100.00
3. total area of land (in 000 ha)	11952	9692	46652	38938	107228
4. percentage area of land owned	11.15	9.04	43.51	36.30	100.00
5. average area (ha) owned per household	0.767	0.304	0.758	1.003	0.725

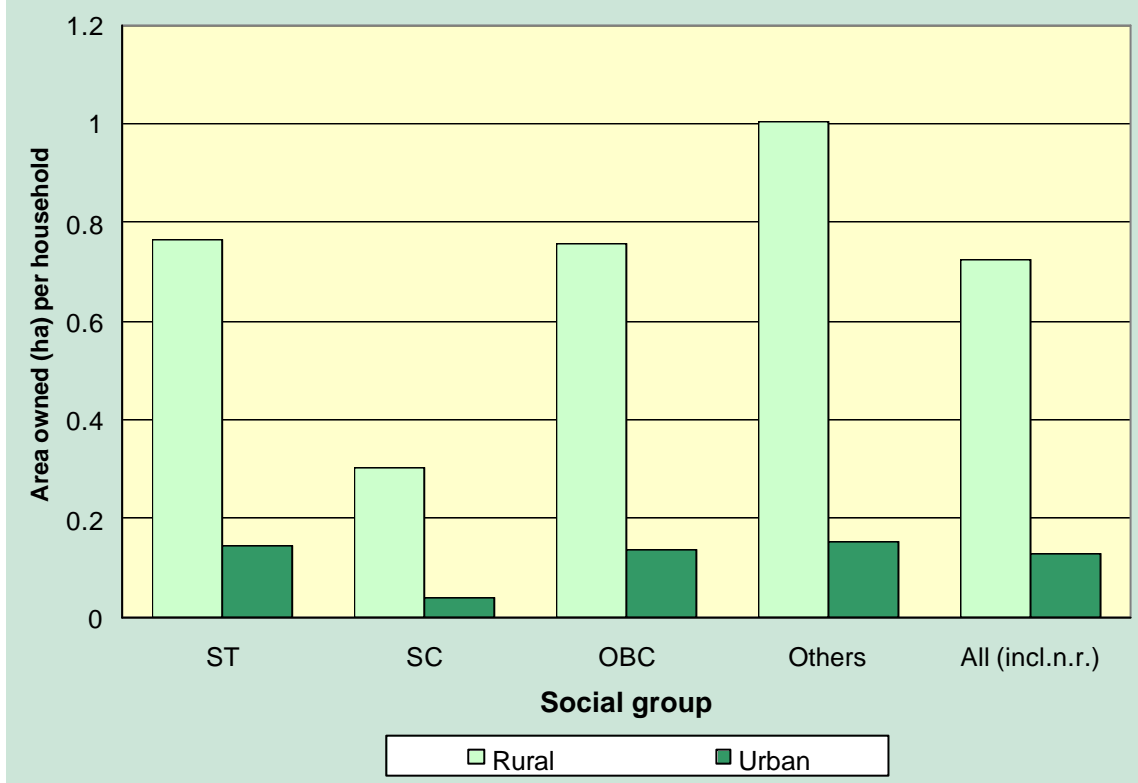

\*includes cases of social group not recorded

<b>All-India</b>					<b>Urban</b>
characteristic	ST	SC	OBC	Others	all*
(1)	(2)	(3)	(4)	(5)	(6)
1. estimated no. of hhs (in 000)	1616	8350	19133	26407	55508
2. percentage of hhs	2.91	15.04	34.47	47.57	100.00
3. total area of land (in 000 ha)	235	344	2652	3982	7212
4. percentage area of land owned	3.25	4.76	36.77	55.21	100.00
5. average area (ha) owned per household	0.145	0.041	0.139	0.151	0.130

\*includes cases of social group not recorded

3.2.3 In the urban sector, the percentages of households belonging to ST, SC, OBC, and Others were 2.9%, 15.0%, 34.5% and 47.6% respectively. The corresponding percentages of area of land owned were 3.3%, 4.8%, 36.8% and 55.2% respectively. The per-household ownership of land also came to about 0.145 ha for ST, 0.041 for SC, 0.139 ha for OBC and 0.151 ha for Others, while it was 0.130 ha for all households in the urban sector. That is, in respect of ownership of land, the SC community was behind other social groups in the urban sector also. Figure 5 below shows average area of land owned per household belonging to different social groups.

**Figure 5: Average area of land owned per household by social group**

### 3.3 Land use pattern in ownership holdings

3.3.1 At the all-India level, the distribution of land by land use is presented in Statement 9. The detailed distributions of land owned by types of land use appear in Table 7R of Appendix A, separately for (a) States/ UTs and (b) fourteen size classes of ownership holdings. Table 7R presents data on land owned and its break-up into six aggregated uses: (i) homestead (ii) orchards and plantations, (iii) seasonal crop area: irrigated plus unirrigated, (iv) water bodies, (v) other non-agricultural uses, and (vi) others (see paragraph 2.12, Chapter Two). Land uses (iv) to (vi) have been merged into 'other uses of land' in Statement 9.

**Statement 9: Composition of land owned by major use**

<b>All-India</b>		<b>Rural</b>
major use of land	area (million ha)	% share
(1)	(2)	(3)
1. homestead	3.37	3.14
2. land for agricultural purpose:	89.91	83.85
2.1 orchards and plantations	2.77	2.58
2.2 seasonal crop area	87.14	81.27
3. other uses of land	13.95	13.01
<b>4. all</b>	<b>107.23</b>	<b>100.00</b>

3.3.2 It is seen from Statement 9 that land for agricultural purpose, particularly seasonal crops, was the major constituent of land owned by the rural households of the country. The share of seasonal crop area in the total land owned was 81%, and that of orchards and plantations was 3%. The remaining 16% was distributed among homestead land and non-homestead land put to other (non-agricultural) uses.

**Statement 10: Percentage distribution of area under land use by broad size-class of ownership holding**

All-India									Rural
size class of ownership holding (ha)	home-stead	agricultural land			non-agricultural land				all
		orchards and plantations	seasonal crop area	total	water bodies	other non-agricultural uses	others	total

<b>all sizes</b>	<b>3.14</b>	<b>2.58</b>	<b>81.27</b>	<b>83.85</b>	<b>0.38</b>	<b>0.39</b>	<b>12.24</b>	<b>13.01</b>	<b>100</b>

3.3.3 Statement 10 above brings out the differences in pattern of land use among different sizes of ownership holdings. It can be seen that the higher the ownership holding size class, the larger the average size of holding and the lower the area devoted to homestead. The share of seasonal crop area in total land owned was more than 70% in all but the bottom four land-owning classes.

3.3.4 Statement 11 shows State-wise percentage distribution of area owned by soil type in the rural sector. Plots reported as owned by the surveyed households were classified by type, the types being sand, loam, silt, light clay and heavy clay, according to the judgement of the informant. It was observed that in the rural sector, at all-India level, 15% of owned land was constituted of soil type sand, 21% of loam, 7% of silt, 41% of light clay and 13% of heavy clay. For approximately 4% of total area owned, soil type is not known because of non-response. The largest share of sandy soil was observed in Rajasthan (50%) and the largest share of loam in Meghalaya (76%). Silt was most common in Uttaranchal (23%), light clay in Madhya Pradesh (60%), and heavy clay in Gujarat (25%).

**Statement 11: Percentage distribution of area owned by soil type**

**Rural**

State	percentage of area owned belonging to soil type						
	sand	loam	silt	light clay	heavy clay	not recorded	all types

<b>all-India</b>	<b>15.04</b>	<b>20.91</b>	<b>6.62</b>	<b>40.95</b>	<b>12.64</b>	<b>3.93</b>	<b>100.00</b>

### 3.4 Incidence and extent of tenancy of land

3.4.1 The survey estimates indicating extent of tenancy in rural India are presented in Statement 12. Details are available in Tables 2R/2U and 3R/3U of Appendix A. Granting the right of using a piece of land to others, either on rent or free, by the owner without transferring the title is termed as lease of land. Such agreements, even when made orally, were considered as lease contracts. For the purpose of the survey, hereditary tenancy and long-term lease for 30 years or more were not treated as land leased – they were treated as land owned. On the other hand, private land encroached upon by a household was treated as leased-in land (free of rent).

**Statement 12: Incidence of tenancy in rural India, 2003**

sl. no.	characteristic	aggregate estimate	percentage to total households/ area
(1)	(2)	(3)	(4)
1.	households reporting leasing out (million)	4.14	2.80
2.	households reporting leasing in (million)	17.03	11.52
3.	area reported as leased out (million ha)	3.28	3.06
4.	area reported as leased in (million ha)	7.56	7.05
5.	area (other than homestead) leased in from rural households (million ha)	6.59	6.15

3.4.2 It is seen that while only 4.1 million (2.8%) households reported leasing out of land, 17.0 million (11.5%) households reported leasing in. A lessor household could have leased out land to more than one lessee household. But there is a large difference between area leased-out (3.3 mha) and area leased-in (7.6 mha). It may be mentioned here that while collection of data on leasing out of land was restricted to household ownership holdings only, that on leasing in covered contracts involving land owned by urban households and non-household sector as well.

3.4.3 The estimate of area (other than that under homestead) leased in from rural households, also obtained from the survey, is about 6.6 mha. This, compared with the survey estimate of area leased out by rural households (3.3 mha), indicates that there are reasons other than those mentioned in the earlier paragraph for the difference between the estimates of area leased in and area leased out. From Appendix Table 14R it is observed that about 7% of area leased in at all-India level was taken from the lessor households belonging to urban areas, i.e., while accounting for the leased-out area in the rural sector, there would be an obvious difference of 7% from the leased-in area. Moreover, it is quite conceivable that there is a tendency to suppress information on leasing out of land among the landowners owing to fear of tenancy legislation. This might have induced widespread under-reporting of leasing out of land. The estimates given in Statement 13 below indicate that leasing out of land was under-reported in the earlier Land Holding Surveys also. Since the estimates on leased-out land are generally underestimates, therefore, in the rest of the discussion, only the proportion of households reporting leasing in of land and the ratio of total area leased in to total area owned are used as indicators of the incidence of tenancy.

**Statement 13: Estimates of reported incidence of leasing out and leasing in of land by households from various rounds of NSS**

All-India			Rural		
sl. no.	characteristic	1971-72 (26 <sup>th</sup> rd)	1982 (37 <sup>th</sup> rd)	1992 (48 <sup>th</sup> rd)	2003 (59 <sup>th</sup> rd)
(1)	(2)	(3)	(4)	(5)	(6)
1.	Percentage of households leasing in land	25%	18%	15%	12%
2.	Percentage of area leased in to total area owned	12%	7%	9%	7%
3.	Percentage of area leased out to total area owned	6%	4%	5%	3%

Estimates for 26<sup>th</sup>, 37<sup>th</sup> and 48<sup>th</sup> rounds are taken from NSS Report Nos. 215, 330 and 399 respectively.

### 3.4.1 Temporal changes in leasing in of land: all-India

3.4.1.1 The proportion of households leasing in land and ratio of land leased in to total area owned from the last three land holding surveys of NSS are given in Statement 13 above. The estimates reveal that there is a declining trend in the percentage of households leasing in land over the three decades. The ratio of area leased in to area owned by households has dropped from 12% to 7% during the last three decades and the ratio of area leased out to area owned, from 6% to 3%.

### 3.4.2 Leasing in of land: inter-State variation

3.4.2.1 Statement 14 provides estimates of the percentages of leasing-in as well as leasing-out households, average area leased in per leasing-in household and ratio of area leased in to total area owned, for all the States.

**Statement 14: State-wise incidence of tenancy**

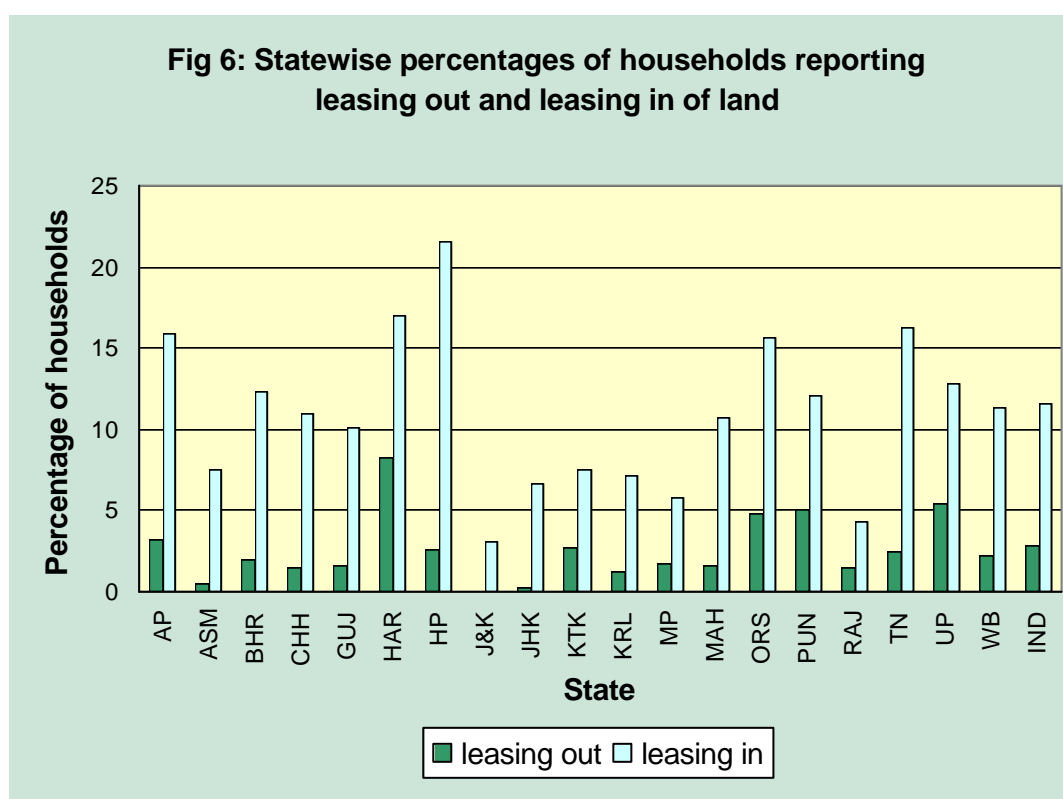

State	percentage of hhs reporting		average area leased in per reporting household	Rural
	leasing out	leasing in		leased-in area as percent of total area owned
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	3.20	15.86	0.378	9.69
Arunachal Pradesh	0.26	9.08	1.587	12.35
Assam	0.55	7.47	0.429	5.81
Bihar	1.94	12.32	0.392	12.82
Chhattisgarh	1.48	11.00	0.618	6.38
Gujarat	1.62	10.08	0.544	5.40
Haryana	8.28	16.99	0.848	17.31
Himachal Pradesh	2.60	21.58	0.077	2.97
Jammu & Kashmir	0.05	3.12	0.098	0.33
Jharkhand	0.24	6.69	0.201	2.40
Karnataka	2.77	7.49	0.455	3.48
Kerala	1.17	7.09	0.156	4.72
Madhya Pradesh	1.72	5.75	0.682	3.00
Maharashtra	1.59	10.73	0.468	4.92
Manipur	2.38	15.42	0.394	12.20
Meghalaya	5.20	18.11	0.340	6.93
Mizoram	0.42	5.84	0.580	3.04
Nagaland	3.29	7.91	0.010	0.09
Orissa	4.84	15.70	0.449	14.59
Punjab	5.11	12.08	1.349	19.46
Rajasthan	1.46	4.25	1.672	3.42
Sikkim	2.59	34.48	0.190	14.60
Tamil Nadu	2.44	16.31	0.145	6.97
Tripura	1.72	6.74	0.250	6.52
Uttar Pradesh	5.36	12.78	0.509	10.52
Uttaranchal	2.07	11.82	0.152	4.85
West Bengal	2.26	11.27	0.271	10.35
Group of UTs	2.24	30.62	0.066	10.49
<b>all-India</b>	<b>2.80</b>	<b>11.52</b>	<b>0.444</b>	<b>7.05</b>

3.4.2.2 Among the States the highest percentage of leasing-in households was reported in Sikkim (34%), followed by Himachal Pradesh (22%), Haryana (17%) and Tamil Nadu (16%). At the other end of the spectrum, two States reported percentages of 5% or less, viz., Jammu & Kashmir (3%) and Rajasthan (4%).

3.4.2.3 There was wide inter-State variation in the average land leased in per leasing-in household. While the national level average was only 0.44 hectare, the average for Rajasthan (where average land owned was much higher than the national average) was found to be as high as 1.67 hectares. On the other hand, about 3 States reported 0.10 hectare or less land leased in per leasing-in household, namely, Himachal Pradesh (0.08 ha), Jammu & Kashmir (0.10 ha) and Nagaland (0.01 ha).

3.4.2.4 The ratio of land leased in to total area owned was 10% or less in most States. Leased-in land constituted over 19% of all land owned in Punjab, 17% in Haryana, over 14% in Rajasthan and Orissa, and nearly 13% in Bihar.

3.4.2.5 Figure 6 shows State-wise percentages of households reporting leasing out and leasing in of land.

### 3.4.3 Terms of lease

3.4.3.1 Leasing of land is contracted by two parties under certain terms of lease which are binding on both the parties. The specific terms of lease on which data were collected in the survey are: (i) for fixed money, (ii) for fixed produce, (iii) for share of produce (iv) for service contracted, (v) for share of produce together with other terms, (vi) under usufructuary mortgage, (vii) from relatives under no specified terms.

3.4.3.2 In Statement 15 the percentage distribution of leased-out area over the first three specific terms of lease and the rest put together as “other terms”, is given for the major States as well as for all-India. More details are available in Table 13R of Appendix A.

3.4.3.3 It is seen that in rural India, a large majority of the contracts were sharecropping and fixed rent in cash or kind. About 40% of the leased-out land was contracted for share of produce. The shares of rent in cash and rent in kind were respectively 31% and 15%. All other terms of lease together accounted for only 14%.

**Statement 15: Percentage distribution of area leased out by terms of lease for each State Rural**

State	for fixed money	for fixed produce	for share of produce	other terms	all
(1)	(2)	(3)	(4)	(5)	(6)
Andhra Pradesh	41.74	22.65	21.72	13.89	100.00
Arunachal Pradesh	0.00	0.00	14.68	85.32	100.00
Assam	20.47	0.00	38.71	40.82	100.00
Bihar	8.89	20.99	59.95	10.17	100.00

Haryana	84.95	2.10	12.75	0.20	100.00
Himachal Pradesh	31.82	5.77	28.73	33.68	100.00
Jammu & Kashmir	6.46	0.00	0.00	93.54	100.00
Jharkhand	0.53	0.00	99.47	0.00	100.00
Karnataka	34.73	1.77	34.90	28.60	100.00
Kerala	33.52	0.00	28.64	37.84	100.00
Madhya Pradesh	10.85	25.15	53.51	10.49	100.00
Maharashtra	34.44	3.32	53.97	8.27	100.00
Manipur	5.52	24.61	65.66	4.21	100.00
Meghalaya	44.07	7.42	43.69	4.82	100.00
Mizoram	0.00	0.00	100.00	0.00	100.00
Nagaland	0.00	21.32	37.74	40.94	100.00
Orissa	11.52	10.65	71.13	6.70	100.00
Punjab	91.69	1.73	1.98	4.60	100.00
Rajasthan	17.62	14.79	44.21	23.38	100.00
Sikkim	31.20	24.47	44.33	0.00	100.00
Tamil Nadu	47.19	14.70	26.33	11.78	100.00
Tripura	6.25	7.05	71.71	14.99	100.00
Uttar Pradesh	14.84	21.18	51.98	12.00	100.00
Uttaranchal	77.39	5.96	10.29	6.36	100.00
West Bengal	29.38	48.79	10.55	11.28	100.00
Group of UTs	33.73	58.12	8.13	0.02	100.00
<b>all-India</b>	<b>31.04</b>	<b>15.30</b>	<b>39.55</b>	<b>14.11</b>	<b>100.00</b>

3.4.3.4 The percentage distributions for the individual major States reveal wide variation in the practice of leasing of land. In Haryana and Punjab – the two most agriculturally advanced States in the country – the most prevalent form of contract was fixed rent in cash. About

85% and 92% of the tenanted land was contracted for fixed cash rent in Haryana and Punjab respectively.

3.4.3.5 Sharecropping was found to be the most prevalent system of leasing of land in Jharkhand (99%) and Orissa (71%). The percentage of tenanted land under this system of lease was also high in Bihar (60%), Maharashtra and Madhya Pradesh (both 54%), Uttar Pradesh (52%), Chhattisgarh (46%) and Rajasthan (44%). In most of the States, sharecropping and fixed rent were the main terms of lease, together accounting for over three-fourths of the total leased-out land. The most notable exceptions were Jammu & Kashmir and Arunachal Pradesh. Most of the leased-out land in Jammu & Kashmir (94%) and Arunachal Pradesh (85%) was leased on “other terms”.

### 3.4.4 Recorded and unrecorded lease: all-India

3.4.4.1 Statement 16 provides estimates of prevalence of recorded and unrecorded lease in rural India (details shown in Table 11R/12R of Appendix A). As mentioned earlier, all tenurial contracts (excepting those made for 30 years or more), whether made verbally or formally, were treated as land lease. The table gives estimates of proportion of households reporting leasing-in and percentage of area leased in by recorded and unrecorded contracts, only for that land which was not under homestead.

**Statement 16: Estimates of recorded and unrecorded leasing in of land (other than homestead)**

<b>All-India</b>	<b>Rural</b>	
nature of lease	percentage of reporting households	percentage share in total area leased in
(1)	(2)	(3)
recorded lease	0.74	9.6
unrecorded lease	6.31	90.4
any lease	7.05	100.0

3.4.4.2 Statement 16 above clearly brings out that the lease contracts were mostly unrecorded. While 7.1 per cent of the rural households reported leasing in of land (other than homestead), only 0.7% reported recorded lease, compared to 6.3% reporting unrecorded lease. The area under recorded lease constituted only 10% of the total leased-in area, compared to 90% under unrecorded lease.

## **Appendix B**

# **Sample Design and Estimation Procedure**

## Appendix B

### Sample Design and Estimation Procedure

**1. Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

**2. Period of survey:** The survey period of this round was January to December 2003.

**3. Visits:** There were four subjects of enquiry in the 59<sup>th</sup> round of NSS: Land and Livestock Holdings, Debt and Investment, Consumer Expenditure, and Situation Assessment Survey (SAS) of Farmers. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August and the other during September to December. Accordingly, each sample first-stage unit (village or block) was visited twice by the investigator to whom it was allotted. A small proportion of households could not be surveyed a second time due to varying reasons; for these, only one set of data could be collected. Some items of information were in any case collected in the first visit only; these included general household characteristics, age, sex, educational level and other characteristics of household members. Also, importantly, information on livestock owned was collected only in the first visit. The field work during the first visit included the canvassing of the listing schedule (Sch. 0.0) and selection of the sample households.

**4. Sub-rounds:** The survey period of the round was divided into two sub-rounds. Sub-round one consisted of the first half of the survey period of each visit while sub-round two consisted of the remaining period. Equal numbers of sample villages/blocks were allotted to each sub-round and a village/block was normally surveyed in the sub-round to which it was allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

**5. Participation of States:** All the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep participated at least on an equal matching basis. The following was the matching pattern of the participating States/UTs.

Nagaland (Urban)	: triple
J & K , Manipur & Delhi	: double
Goa, Maharashtra (Urban)	: one and half
Remaining States/UTs	: equal

#### 6. Sample design

**6.1 Broad design:** A stratified multi-stage design was adopted for the 59<sup>th</sup> round survey. The first-stage units (FSU) were the census villages (*panchayat* wards in Kerala) in the rural sector and UFS blocks in the urban sector. In both sectors, the ultimate stage units were households. In large villages/ blocks, an intermediate stage unit called hamlet-group/ sub-block was also involved.

**6.2 Sampling frame for first-stage units:** The list of villages (*panchayat* wards for Kerala) as per Population Census 1991 was used as sampling frame in rural areas; for urban areas, the latest UFS frame was used.

### 6.3 Stratification

6.3.1 **Rural Sector:** Two *special strata* were formed at the State/ UT level:

Stratum 1: all FSU's with population between 0 to 50 and

Stratum 2: FSU's with population more than 15,000.

6.3.1.1 Special stratum 1 was formed whenever at least 50 such FSU's were found in a State/UT. Similarly, special stratum 2 was formed if at least 4 such FSU's were found in a State/UT. Otherwise, such FSU's were merged with the general strata.

6.3.1.2 From FSU's other than those covered under special strata 1 & 2, *general strata* were formed, their numbering starting from 3 onwards. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per Population Census 1991 or 2.5 million as per Population Census 2001, the district was split into two or more strata by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly included in an NSS region. In such cases, the part of the district falling in each NSS region constituted a separate stratum.

6.3.2 **Urban Sector:** In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Population Census 2001. The stratum numbers and their composition (within each region) are given below.

stratum 1 :	all towns with population less than 50,000
stratum 2 :	all towns with population 50,000 or more but less than 2 lakhs
stratum 3 :	all towns with population 2 lakhs or more but less than 10 lakhs
stratum 4, 5, 6,... :	each city with population 10 lakhs or more

The stratum numbers remained as above even if, in some regions, some of the strata did not exist.

**6.4 Total sample size (FSU's):** 6760 villages and 3824 urban blocks were allocated at all-India level for the Central sample. 6638 villages and 3764 urban blocks were ultimately surveyed. In all 82158 households were interviewed.

**6.5 Allocation of total sample to States and UTs:** The total number of sample FSU's was allocated to the States and UTs in proportion to provisional population as per Census 2001 subject to the availability of investigators, so as to ensure more or less uniform workload.

**6.5.1 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the rural and urban sectors in proportion to provisional population as per Census 2001 with 1.5 weightage to the urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. would not exceed the rural sample size. The earlier practice of giving double weightage to urban sector was modified considering the fact that two important subjects of enquiry (Land and Livestock Holdings and Situation Assessment Survey of Farmers) were rural-based and there had been considerable

growth in urban population over the years. More FSU's were, however, allocated to the rural sector of Meghalaya state sample at the request of the DES, Meghalaya.

**6.5.2 Allocation to strata:** Within the rural area of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 FSU's was allocated to a stratum wherever possible.

**6.6 Selection of FSU's:** In all the strata except for stratum 1, FSU's were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991. In stratum 1 of the rural sector and in all the strata of the urban sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples in both rural and urban sectors.

## 6.7 Selection of hamlet-groups and households

**6.7.1 Formation of hamlet-groups/ sub-blocks:** Large villages/blocks having approximate present population 1200 or more were divided into a suitable number of hamlet-groups/sub-blocks (h-g's/ s-b's) as shown below:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	...

\*(i.e., no h-g/ s-b formation)

**6.7.2** For rural areas of Himachal Pradesh, Sikkim and Nagaland, and Poonch, Rajouri, Udhampur and Doda districts of Jammu and Kashmir, the number of hamlet-groups formed was as follows:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 600	1*
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	...

\*(i.e., no h-g/ s-b formation)

6.7.3 Hamlet-groups/ sub-blocks were formed by more or less equalising population. Two hamlet-groups/ sub-blocks were selected from a large village/ block by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks so formed.

## 6.8 Formation of second-stage strata (SSS):

### 6.8.1 Rural

6.8.1.1 From the data of NSS 48<sup>th</sup> round, households having land area 0.005 hectares or more were considered. Two cut-off points, X and Y, were determined at State/UT level in such a way that 40% of these households possessed land area less than X, 40% possessed land area between X & Y and 20% possessed land area greater than Y.

6.8.1.2 For the land and livestock holdings survey (Sch. 18.1) of the 59<sup>th</sup> round, four second-stage strata (SSS) were formed in the rural sector as follows:

- SSS 1: households with land less than 0.005 hectare  
 SSS 2: households with land equal to or more than 0.005 hectares but less than X  
 SSS 3: households with land equal to or more than X but less than Y  
 SSS 4: households with land equal to or more than Y

**Table 1: The values of cut-off points X and Y of land possessed (in hectares) for each State/UT**

State/UT	X	Y	State/UT	X	Y
(1)	(2)	(3)	(1)	(2)	(3)
Andhra Pradesh	0.223	1.574	Nagaland	0.688	1.214
Arunachal Pradesh	1.255	2.024	Orissa	0.401	1.352
Assam	0.405	1.214	Punjab	0.024	2.141
Bihar	0.154	0.979	Rajasthan	1.085	4.152
Chattisgarh	0.809	2.149	Sikkim	0.607	1.862
Goa	0.125	0.712	Tamil Nadu	0.032	0.830
Gujarat	0.773	2.930	Tripura	0.162	0.728
Haryana	0.494	2.469	Uttar Pradesh	0.348	1.384
Himachal Pradesh	0.389	1.214	Uttaranchal	0.283	0.809
Jammu & Kashmir	0.575	1.566	West Bengal	0.138	0.850
Jharkhand	0.405	1.307	A & N Islands	0.073	2.024
Karnataka	0.805	2.432	Chandigarh	0.125	1.251
Kerala	0.069	0.445	D & N Haveli	0.506	1.085
Madhya Pradesh	1.052	3.752	Daman & Diu	0.182	0.971
Maharashtra	0.817	3.246	Delhi	0.016	0.417
Manipur	0.299	1.052	Lakshadweep	0.081	0.182
Meghalaya	0.538	1.348	Pondicherry	0.016	0.421
Mizoram	0.567	1.214			

## 6.8.2 Urban

6.8.2.1 Four second-stage strata (SSS) were formed as follows: First, three cut-off points, viz. A, B & C, at State/UT level were determined using NSS 55<sup>th</sup> round data in such a way that 30% of the households had MPCE less than A, 30% had MPCE more than or equal to A but less than B, 30% had MPCE more than or equal to B but less than C and the remaining 10% of the households had MPCE more than or equal to C.

6.8.2.2 The SSS for Sch. 18.1 in the urban sector were as follows:

- SSS 1: households with MPCE less than A
- SSS 2: households with MPCE equal to or more than A but less than B
- SSS 3: households with MPCE equal to or more than B but less than C
- SSS 4: households with MPCE equal to or more than C

**Table 2: The values of the cut-off points (A, B & C) of monthly per capita expenditure (in rupees) for urban sector for each State/UT**

State/UT.	A	B	C	State/UT	A	B	C
(1)	(2)	(3)	(4)	(1)	(2)	(3)	(4)
Andhra Pradesh	479	719	1405	Nagaland	931	1220	1906
Arunachal Pr.	511	751	1610	Orissa	400	580	1055

Meghalaya	729	902	1538	Pondicherry	531	770	1388
Mizoram	781	1047	1702				

**6.9 Allocation and selection of sample households:** Eight sample households were allocated to each sample FSU. In case of no hamlet-group formation, two households were selected from each of the four second-stage strata. In case of hamlet-group formation, one household was selected from each SSS of each hamlet-group. Sample households were selected by SRSWOR in each SSS of each hamlet-group.

## 7. Estimation procedure

### 7.1 Notations:

s = subscript for stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU

d = subscript for a hamlet-group (d = 1, 2)

j = subscript for second-stage stratum of an FSU/ h-g/ s-b

k = subscript for sample household of a particular second-stage stratum within an FSU/ h-g/ s-b

D = total number of h-g's formed in the sample FSU

$D^* = 1$  if  $D = 1$

$= D, 2$  for FSU's with  $D > 1$

N = total number of FSU's in stratum 1

Z = total size of a stratum other than stratum 1 (= sum of sizes for all the FSU's of a stratum other than stratum 1)

z = size of sample FSU used for selection.

n = number of sample FSU's surveyed including zero cases but excluding casualty for a particular sub-sample and stratum.

H = total number of households listed in a second-stage stratum of a h-g/s-b of the sample FSU

h = number of households surveyed in a second-stage stratum of a h-g/s-b of the sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}, \hat{Y}$  = estimate of population total X, Y for the characteristics x, y.

In terms of the above symbols,

$y_{smidjk}$  = observed value of the characteristic y for the  $k^{\text{th}}$  household in the  $j^{\text{th}}$  second stage stratum of the  $d^{\text{th}}$  h-g (d = 1, 2) of the  $i^{\text{th}}$  FSU belonging to the  $m^{\text{th}}$  sub-sample for the  $s^{\text{th}}$  stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

## 7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum:

### Rural:

Estimation formula for stratum 1:

(i) For households selected in  $j^{\text{th}}$  second stage stratum (j=1, 2, 3 or 4):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in  $j^{\text{th}}$  second stage stratum ( $j=1,2,3$  or  $4$ ):

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### Urban:

(a) Estimation formula for a stratum:

(i) For households selected in  $j$ -th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) *Estimates in respect of joint operational holdings:* In the case of joint operational holdings operated by the sample household jointly with other household(s), the value of a characteristic of the operational holding is first multiplied by the percentage share of land of the sample household(s) and then the higher estimates are built up.

### 7.3 Overall estimate of aggregates for a stratum:

Overall estimate for an aggregate for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

#### 7.3.1 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

#### 7.4 Estimates of ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

#### 7.5 Estimates of Error:

The variances of the above estimates are estimated as follows:

A) For aggregate  $\hat{Y}$ :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where  $V\hat{a}r(\hat{Y}_s)$  are as given below.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \sum_j V\hat{a}r(\hat{Y}_{sj})$$

$$\text{where } V\hat{a}r_{ppswr}(\hat{Y}_{sj}) = \frac{1}{n_{sj}(n_{sj} - 1)} \left[ \sum_{i=1}^{n_{sj}} \frac{Z_s^2 \hat{Y}_{sij}^2}{Z_{si}^2} - n_{sj} \hat{Y}_{sj}^2 \right]$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$V\hat{a}r_{srswor}(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$$

where  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's'.

B) For ratio  $\hat{R}$  :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[ \sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$M\hat{S}E_s(\hat{R}) = \frac{1}{n_s(n_s - 1)} \sum_{i=1}^{n_s} \left[ \frac{Z_s}{Z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) - \frac{1}{n_s} \sum_{i=1}^{n_s} \frac{Z_s}{Z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) \right]^2$$

where

$$\hat{Y}_{si} = \sum_j \hat{Y}_{sij} , \quad \hat{X}_{si} = \sum_j \hat{X}_{sij} ,$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} y_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} y_{si2jk} \right] ,$$

$$\hat{X}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} x_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} x_{si2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$M\hat{S}E_{s'}(\hat{R}) = \frac{1}{4} \left[ (\hat{Y}_{s'1} - \hat{Y}_{s'2})^2 + \hat{R}^2 (\hat{X}_{s'1} - \hat{X}_{s'2})^2 - 2\hat{R} (\hat{Y}_{s'1} - \hat{Y}_{s'2}) (\hat{X}_{s'1} - \hat{X}_{s'2}) \right]$$

C) Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\text{Var}(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 7.6 Multipliers :

The formulae for multipliers for a sub-sample are given below:

stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural stratum 1 and all urban strata	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}}$ , j = 1, 2, 3, 4	$\frac{N_s}{n_{sm}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$ , j = 1, 2, 3, 4
rural s ≠ 1	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}}$ , j = 1, 2, 3, 4	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$ , j = 1, 2, 3, 4

Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, an indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

## 7.7 Treatment for zero cases, casualty cases etc.

7.7.1 While counting the number of FSU's surveyed ( $n_m$ ) in a stratum, all the FSU's with survey codes 1 to 6 in listing schedule 0.0 are considered. In addition, if no household is available in the frame, the FSU is still treated as surveyed. However, if households are available in the frame of the FSU but none of them could be surveyed, then that FSU is treated as casualty.

7.7.2 *Casualty cases*: FSU's with survey code 7 as per listing schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for a particular schedule type and a particular *second-stage stratum* as explained in the next paragraph.

7.7.3 FSU's with survey codes 1 and 4 as per listing schedule having number of households in the frame of  $j^{\text{th}}$  second-stage stratum greater than 0 but number of households surveyed according to data file, considering both h-g/s-b's together, as nil (i.e.  $H_{1j} + H_{4j} > 0$  but  $h_{1j} + h_{4j} = 0$ ) are taken as casualties for  $j^{\text{th}}$  second-stage stratum.

7.7.4 *All the FSU's with survey codes 1 to 6 as per listing schedule minus the number of casualties as identified above are taken as the number of surveyed FSU's ( $n_{smj}$ ) for that stratum × second stage stratum.*

7.7.5 When casualty for  $j^{\text{th}}$  second stage stratum occurs for a particular h-g/s-b but not for the other h-g/s-b, the FSU is not treated as casualty, but some adjustments in the value of H for the other h-g/s-b are done as follows:

- (i) Suppose for h-g/s-b 1,  $H_{1j} > 0$  but  $h_{1j} = 0$  while for h-g/s-b 2,  $H_{2j} > 0$  and  $h_{2j} > 0$ . In that case  $D_i^* \times H_{i2j}$  is replaced by  $H_{1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of segment 2.
- (ii) Suppose for h-g/s-b 1,  $H_{1j} > 0$  and  $h_{1j} > 0$  while for h-g/s-b 2,  $H_{2j} > 0$  but  $h_{2j} = 0$ . In that case  $H_{1j}$  is replaced by  $H_{1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of h-g/s-b 1.

It may be noted that  $n_{smj}$  will be the same for h-g/s-b 1 & 2 of an FSU.

## 7.8 Treatment in cases of void second-stage strata/sub-strata /strata/NSS region at FSU or household level

7.8.1 A stratum may be void because of the casualty of all the FSU's belonging to the stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then the estimate for the void stratum is replaced with the estimate obtained from the other sub-sample for the same stratum.

7.8.2 When a stratum is void in both the sub-samples, the following procedure is used:

### Case (I): Stratum void cases at FSU levels (i.e. all FSU's having survey code 7):

- i) If a stratum, other than stratum 1, is void then it may be merged with a similar stratum within the same NSS region. However, if stratum 1 is void for any State/UT, it is not merged with any other stratum.
- ii) If all the strata within an NSS region are void, it is regarded as excluded from the coverage of the survey. The state-level estimates are based on the estimates of NSS regions for which estimates are available.

### Case (II): Stratum void case at second-stage stratum level (i.e. all the FSU's are casualties for a particular second-stage stratum):

An FSU may be a casualty for a particular *second-stage stratum* although survey code is not 7. If all the FSU's of a stratum become casualties in this manner for a particular *second-stage stratum*, the stratum becomes void. The adjustment for this type of stratum void case is done according to the following guidelines.

The adjustment is made involving other strata (within NSS region) of the State/UT. Suppose A, B, C, and D are the four strata in the State/UT/Region and stratum C is void for j-th *second stage stratum*. If  $\hat{Y}_{aj}$ ,  $\hat{Y}_{bj}$  and  $\hat{Y}_{dj}$  are the aggregate estimates for the strata A, B and D

respectively, then the estimate  $\hat{Y}_{cj}$  for stratum C is obtained as  $\left( \frac{\hat{Y}_{aj} + \hat{Y}_{bj} + \hat{Y}_{dj}}{Z_a + Z_b + Z_d} \times Z_c \right)$  where  $Z_a$ ,

$Z_b$ ,  $Z_c$  and  $Z_d$  are the sizes of strata A, B, C and D respectively.
