India (2004) Employment and Unemployment Survey: NSS 60th Round : January 2004 - June 2004

Overview	
Type	Socio-Economic/Household Survey
Identification	DDI-IND-MOSPI-NSSO-60th-Sch10-2004
Version	Production Date: 2012-10-20 V1.0; Re-organised anonymised dataset for public distribution.
Series	The National Sample Survey Organisation (NSSO) has carried out a number of all-India household surveys on employment and unemployment since its 9th round (May-September, 1955). All-India surveys on employment and unemployment are being conducted quinquennially on a large sample of households from the 27th round (October 1972 – September 1973). Six quinquennial surveys have so far been conducted by the NSSO in its 27th round, 32nd round (July 1977 – June 1978), 38th round (January – December 1983), 43rd round (July 1987 – June 1988), 50th round (July 1993 – June 1994) and 55th round (July 1999 – June 2000). Apart from these quinquennial surveys, the NSSO collected information on certain key items on employment and unemployment, as a part of the annual series, from a smaller sample of households in each round since 45th round (July 1989 – June 1990) till 59th round (January – December 2003). The data in these rounds was collected through the schedule meant for household consumer expenditure.
Abstract An all-India survey on the situation of employment and unemployment in India during the period January to June, 2004 was carried out as part of the annual series in the 60th round of the National Sample Survey Organisation (NSSO). In this survey, a nation-wide enquiry was conducted in a moderately large sample of households to provide estimates on various characteristics pertaining to employment and unemployment in India and some characteristics associated with them at the national and state levels. Information on various facets of employment and unemployment in India were collected through a schedule of enquiry (Schedule 10). These apart, information on vocational training received by persons in the age group 15-29 were collected for the first time in NSS surveys.	
Kind of Data	Sample survey data [ssd]
Unit of Analysis	Randomly selected households based on sampling procedure and members of the household

Scope & Coverage

Scope

In the present survey, there was a significant change in respect of the procedure of data collection and content of information as compared to the earlier annual rounds. Planning Commission, this time, submitted their additional requirement of measuring employment and unemployment in terms of current daily status approach. They also stressed the requirement of collecting information in respect of formal vocational training received by the youth to assess its volume and structure for future manpower planning, besides collecting information from persons who were unemployed on all 7 days preceding the date of survey on their employment, if any, in the past, status and industry of work, reason for quitting the job, etc. that were generally collected in the quinquennial rounds. These requirements of Planning Commission necessitated the designing of a separate schedule (Schedule 10) for collection of information on employment and unemployment situation in order to release the burden of the schedule meant for gathering information on household consumer expenditure. Therefore, the schedule on employment and Unemployment was canvassed in a separate set of sample households.

Summary description of the schedule

In the present round, Schedule 10 on employment-unemployment consists of 11 blocks. Of these, five blocks are similar to the ones used in usual NSS rounds. The first three blocks, viz. Blocks 0, 1 and 2, are used to record identification of sample households and particulars of field operations, as is the common practice in usual NSS rounds. Similarly, the last two blocks, viz., Blocks 9 & 10, are again the usual blocks to record the remarks of investigator and comments by supervisory officer(s), respectively. Of the remaining 6 blocks, Block 3 is for recording the household characteristics like household size, household industry, occupation, religion, social group, household type, land possessed and monthly household consumer expenditure, etc. Block 4 is for recording the demographic particulars as well as the usual principal activity and usual subsidiary activity particulars of all the household members.

The daily time disposition for different activities for each of the seven days prior to the date of survey along with the particulars of the activities will be recorded for each of the household members in Block 5. Further, the current weekly status (cws) will be derived from the daily time disposition data and will be recorded in this block. In addition, for the regular salaried/wage employee and casual labourers, wage and salary earnings will also be collected in this block. Block 6 is for recording the responses to the probing questions for those who were unemployed on all the seven days of the reference week. Such persons will be identified on the basis of duration of unemployment during the reference week recorded in Block 5.

Particulars of formal vocational training received by household members of a specified age-group and educational standard will be collected in the employment-unemployment schedule of NSSO for the first time. In Block 7, particulars of vocational training such as 'description of the field of training', 'name and address of agency from where training received', 'duration of the training' etc. will be collected. Block 8 is a worksheet to obtain the monthly household consumer expenditure, which is broadly in line with that used with the schedule 10 in the 55th round.

Geographic Coverage

The survey covered the whole of the Indian Union excepting (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) 768 interior villages of Nagaland situated beyond 5 kms. of the bus route and (iii) villages of Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavourable field conditions.

Universe

The survey used the interview method of data collection from a sample of randomly selected households and members of the household

Sampling

Sampling Procedure

An outline of the sampling design: The sampling design adopted for the survey was essentially a stratified multi-stage one for both rural and urban areas. The first stage units (FSUs) were villages (panchayat wards for Kerala) for rural areas and NSS Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were households. Large FSUs were subdivided into hamlet-groups (rural)/sub-blocks (urban). Details of the formation of hamlet-groups/sub-blocks and procedure of selection of hamlet-groups/sub-blocks and then of households are also given in Appendix B.

Sampling Frame for FSUs: The list of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks of NSSO were respectively used for selection of rural and urban sample FSUs. For selection of sample villages from the State of Jammu & Kashmir, the list of villages as per 1981 Census was used as the sampling frame. However, interior villages of Nagaland situated beyond 5 kms. of the bus route and inaccessible villages of Andaman & Nicobar Islands were left out of the survey coverage of NSS 60th round.

The procedure for selection of fsus/usus is given in detail in Appendix B of the report no.506 attached as external resources.

Deviations from Sample Design

There was no deviation from the original sample deviation.

Response Rate

A total number of 7,612 FSUs (4,908 villages and 2,704 urban blocks) was selected for survey in the Central sample at the all-India level in the 60th round for canvassing Schedule 10. Out of these 7612 FSUs allotted for survey, 7424 FSUs could be surveyed - 4755 in rural and 2669 in urban.

second stage units: For Schedule 10, a sample of 8 households was selected and surveyed from each selected village and urban block. In the Central sample, 59159 households were actually surveyed – 37883 in rural areas and 21276 in urban areas. As regards the actual number of persons surveyed, it was 204403 in the rural sector and 99425 in the urban sector.

Weighting

For generating any estimate, one has to extract relevant portion of the data, and aggregate after applying the weights.

Weights (or multipliers) VARIABLES are given at the end of record of each dataset. The weights (multipliers) are WGT_SS for Sub-sample-wise estimation and WGT_Combined for combined subsample estimates.

All records of a household will have same weight figure. In case of those Blocks/Levels, where Item/Person SI.No. is not applicable the field is filled up with 00000.

Use of subsample-wise weights (multipliers)

For generating subsample-wise estimates based on data of all subrounds taken together, either Subsample-1 households or Subsample-2 households are to be considered at one time. Subsample code is available in the dataset For generating subsample-combined estimates based on data of all subrounds taken together all households are to be considered.

Data Collection Notes	
<p>The fieldwork of 60th round of NSSO started from 1st January, 2004 and continued till 30th June, 2004. As usual, the survey period of this round was divided into two sub-rounds, each with a duration of three months, the 1st sub-round period ranging from January to March, 2004 and the 2nd sub-round period from April to June, 2004. An equal number of sample FSU's was allotted for survey in each of these two sub-rounds.</p>	
Questionnaires	
<p>Summary description of the schedule : The schedule 10 on employment-unemployment for NSS60th round consisted of 10 blocks as given below.</p> <p>Block 0: Descriptive identification of sample household Block 1: Identification of sample household Block 2: Particulars of field operations Block 3 - Household Characteristics. Block 4: demographic and usual activity particulars of household members Block 5: Time disposition of members during the week ended on Block 6: Follow-up questions for persons unemployed on all the 7 days of the week Block 7: Particulars of vocational training received by household members aged 15 - 29 Block 8: household consumer expenditure Block 9: Remarks by investigator Block 10: Comments by supervisory officer(s)</p>

#19 B1_q17: Response Code

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=59152 /-] [Invalid=0 /-]
Interviewer's instructions	This item will be filled in after collecting information for all items in the Schedule. The entry is to be made in terms of codes on the basis of the impression formed by the investigator regarding the overall response of the informant.

Value	Label	Cases	Percentage
1	informant : co-operative and capable	45511	76.9%

#20 B1_q18: Survey Code

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=59159 /-] [Invalid=0 /-]
Interviewer's instructions	Whether the originally selected sample household or a substitute household has been surveyed will be indicated against this item by recording code '1' if the originally selected household has been surveyed and code '2' if the substitute household has been surveyed. If neither the originally selected household nor a substitute household could be surveyed, i.e. if the sample household is a casualty, code '3' will be recorded. In case of a casualty only the blocks 0,1 ,2, 9 and 10 are to be filled up and on the top of the front page of the schedule the word 'CASUALTY' will be written in block capitals.

Value	Label	Cases	Percentage

#26 B4_c9: Usual activity-principal status

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=303828 /-] [Invalid=0 /-]
Interviewer's instructions	For each of the members, the usual principal activity status will be recorded in this column. In the first instance, the broad usual principal activity of the person will be identified based on the various activities pursued by the person during the reference period of last 365 days adopting a 'relatively long time (or major time)' criterion, not necessarily for a continuous period. The broad usual principal activity status will be one of the three categories viz. 'employed' (working), 'unemployed' (available for work) or 'not in labour force' (neither working nor available for work). It is to be noted that in deciding this, only the normal working hours available for pursuing various activities need to be considered, and not the 24 hours of a day.

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=109645 /-] [Invalid=0 /-]
Interviewer's instructions	Columns (10) and (11) will be filled-in for those who are 'working' i.e. those with any one of codes 11, 12, 21, 31, 41, or 51 in column (9). The corresponding 5 digit industry code (NIC-98) and the 3 digit occupation code (NCO-68) will be entered in columns (10) and (11), respectively. In case two or more industry-occupation combinations corresponding to the status code given in column (9) have been reported by a person, the principal industry-occupation will be the one in which relatively more time has been spent during the preceding 365 days by the person.

Interviewer's instructions	<p>Intensity of activity: For each activity recorded in column (3), the intensity with which the particular activity is performed on the different days of the reference week will be recorded in quantitative terms 'half' or 'full' in these columns.</p> <p>For each activity listed in column (3) either one 'full' intensity or two 'half' intensity may be assigned to a person on any one of the seven days of the reference week. For a particular activity, the recording of entries in columns (7) - (13) should start from column (7) which is provided for recording the intensity of that activity on the seventh day of the reference week, i.e., the day preceding the date of survey. Similarly, the intensity of that activity on the sixth, fifth and earlier days of the week will be recorded in columns (8), (9), (10), (11), (12) and (13) respectively. If the intensity of an activity is 'full' on a particular day, '1.0' will be recorded in the relevant column. On the other hand, if the intensity is 'half', the entry will be '0.5'. If that particular activity is not pursued on some other days of the reference week, the corresponding columns provided in the block for those days will be left blank against that activity. Thus, for each day, for a person, there will be either only one entry with intensity 1.0 in any one of the lines or two entries with intensity 0.5 each in any two of the lines.</p>

The wage and salary earnings are collected for regular salaried/wage employees and casual wage labours, the relevant status codes for which wages & salary are to be recorded are 31, 41, 51, 71 and 72. The wages and salaries receivable for the work done during the reference week may be already received or may still be due to be received in cash or in kind or partly in case and partly in kind. The total wage or salary receivable for the week in cash will be recorded in column (15) and the value (evaluated at the current retail price) of salary or wages in kind receivable for the week will be recorded in column (16). The total of columns (15) and (16) will be entered in column (17). The entries for all these columns will be made in whole rupees. For recording the wages or salaries, amount receivable as 'overtime' for the additional work done beyond normal working time will be included. Bonus (expected or paid) and perquisites evaluated at retail prices duly apportioned for the reference week, will be considered as wages and included for making entries in these columns. For the activity status '71' and '72', the amount receivable for the week will be worked out on the basis of the number of days reported under the activity during the week.

Information	[Type= discrete] [Format=numeric] [Range= 1-8] [Missing=*]
Statistics [NW/ W]	[Valid=6540 /-] [Invalid=248 /-]

Interviewer's instructions
The spell of unemployment means the continuous period for which the person remains unemployed. The present spell will, therefore, refer to the period starting from the day the person became unemployed to the survey date. In the case of persons who are first entrants to the labour force, the present spell will be equal to the entire length of unemployment starting from the day such person joins the labour force, i.e., the day since when he/she was seeking/available for work. For those who had any previous employment, the present spell will be the period starting from the day they were seeking or available for work after losing their last employment to the survey date. The spell will be recorded in terms of codes

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=6788 /-] [Invalid=0 /-]

Interviewer's instructions
The purpose of this item is to separate first time job seekers from persons who worked sometime in the past but are now unemployed. As the subsequent columns will be used to record the details of last employment, this last employment will mean having more or less regular work for at least for some time in the past. Thus, among the unemployed, those who had more or less regular work at least for sometime in the past according to either the usual principal activity status or the usual subsidiary economic activity status will be given code 1 in column (4).

Definition	Household consumer expenditure is the sum total of monetary values of all goods and services consumed (out of purchase or procured otherwise) by the household on domestic account during a specific reference period.
Interviewer's instructions	If an item is purchased and consumed by a household, the value of consumption can be taken as its purchase value. But, the value of an item consumed out of commodities received in exchange of goods and services, home-grown/home-produced stock, transfer receipts or free collection requires imputation.
