Department Of Statistics  
Government Of India***

**March, 1997**

## ***Preface***

*The National Sample Survey Organisation (NSSO) has been carrying out all-India surveys quinquennially on consumer expenditure, employment & unemployment.*

*The present report is based on data collected in the 50th round (July 1993-June 1994) socio-economic survey of NSS. It was the fifth quinquennial survey on consumer expenditure, employment & unemployment. The previous four quinquennial surveys were conducted during the 27th (October 1972 - September 1973), the 32nd (July 1977 - June 1978), the 38th (January- December 1983) and the 43rd (July 1987 - June 1988) rounds. The schedule design for the survey was essentially similar to that adopted in the previous quinquennial rounds.*

*In order to provide the Planning Commission with necessary data for formulation of the Ninth Five Year Plan, it was decided to bring out basic information on employment patterns based on a detailed survey. The survey was conducted in 1993-94. This report has been prepared essentially giving labour force participation patterns for India and its major states as well as for different consumer expenditure levels, education levels, age-groups and other correlates. The report consists of nine chapters and related tables. Chapter I is introductory, Chapter II sets out the conceptual framework and Chapter III gives the sample design and estimation procedure adopted in the survey. Chapters IV to IX deal with summary findings of the report on employment, unemployment and underemployment.*

*The field work of the survey was done by the Field Operations Division, data processing and tabulation work were handled by the Data Processing Division and the Computer Centre, respectively. The Survey Design and Research Division was responsible for designing the survey and preparing this report.*

*I am thankful to the members of the Working Group for their valuable guidance at various phases of the work - from designing of the schedule of enquiry to the preparation of this report. I am grateful to the members of the Governing Council, Heads of various Divisions of NSSO and their colleagues for the efforts in preparing the report which can hopefully serve as a reference document to planners and policy makers.*

*March, 1997*

## Highlights

---

This report is based on the fifth quinquennial survey on employment and unemployment conducted in the 50th round of NSS during July, 1993 to June, 1994. The survey covered 115,409 households enumerating 564,740 persons, spread over 6983 villages and 4670 urban blocks. Employment and unemployment were measured with three different approaches viz. usual status with a reference period of one year, current weekly status with one week reference period and current daily status based on the daily activity pursued during each day of the reference week. Some of the key findings are given below.

- Labour force (which supply the labour and includes both employed and unemployed persons) in terms of both the principal and subsidiary usual statuses, constituted 45 per cent in the rural and 36 per cent in the urban areas. The share of the usually unemployed in the population was negligible - 0.5 and 1.6 per cent in the rural and urban areas, respectively.
- Between 1987-88 and 1993-94, the labour force participation rates declined in the younger age-groups for males and females of each sector.
- Over one-third of the population (37 per cent) was in the employed category as per their usual status. The usually unemployed constituted a very small percentage - 1 per cent in the total population.
- The worker population ratio (WPR) differed between males and females in both rural and urban areas. The rate was 54 and 23 percent for males and females in the rural areas and 51 and 12 percent in the urban areas.
- While the daily status rates were slightly lower than usual status rates, the current weekly status ones were slightly higher for females.
- The worker population ratio for males, according to the usual status including the subsidiary workers (i.e. all workers) during 1993-94 was one percentage point higher than during the previous survey year 1987-88 in both rural and urban India, and for females, the rates remained at the same level.
- The state-specific WPR varied significantly among males and females in both rural and urban areas. Among the major states, the WPR, according to usual principal status, ranged from 54 per cent in rural Andhra Pradesh to 30 per cent in rural Punjab and in the urban areas, from 36 per cent in Andhra Pradesh to 26 per cent in Bihar.

## Highlights contd.

---

- In rural India, the proportion of 'all' male workers engaged in the agricultural sector gradually declined from 83 per cent in 1972-73 to 74 per cent in 1987-88 and then remained almost stable at that level. On the other hand, the proportion of female workers engaged in this sector declined from 90 per cent in 1972-73 to 85 per cent in 1987-88 and then shows a slight increase of one percentage point in 1993-94.
- In urban India, the proportion of 'all' workers engaged in the manufacturing sector declined during the period 1972-73 to 1993-94. The compensating gain has been in 'construction', trade' and 'service' sectors.
- The incidence of unemployment among the educated was much more than that among their counterparts. The incidence was also much more in the rural sector than in the urban sector. Secondly, the rate is much higher among the females than that among the males. Among the graduates, the disparity was even more glaring.
- During 1993-94, the proportion of usually employed females who were found to be not employed during the week preceding the date of survey was 19 per cent in rural India and 12 per cent in urban India. The corresponding percentages for usually employed males were 4 and 2 only.
- The proportion of person-days of the usually employed utilised for work was quite low for females compared to males - about 66 per cent in rural India and 77 per cent in urban India as against 91 and 95 per cent for rural and urban males, respectively.
- About 4 to 5 per cent of the usually employed had changed the nature of work and/or establishment during the two years preceding the survey.
- The rate of change of nature of work and/or establishment was roughly the same for males and females but higher for the non-educated persons. Secondly, the change of work and/or establishment was more frequent among casual labourers than among regular wage/salaried employees and self-employed.
- The incidence of occupation mobility was higher in urban areas than that in rural areas and was highest among the urban male workers.

## List of All-India Detailed Tables

Table No.	Description	Page No.
3R	Distribution of households by household type for each household monthly per capita expenditure class for rural areas	A1-A2
3U	Distribution of households by household type for each household monthly per capita expenditure class for urban areas	A3-A4
4R	Distribution of households by land ownership status for each household type and type of land owned (Rural only)	A5
5R	Average area of land possessed and average household size by size class of land possessed and sex of head of household	A6
6R	Distribution of households by household type for each size class of land cultivated and sex of head of household for rural areas	A7
7R	Distribution of households by household monthly per capita expenditure class for each size class of land cultivated for rural areas	A8
8	Distribution of households by household monthly per capita expenditure class (MPCE) for each principal household industry	A9-A10
11R	Distribution of households by use of hired labour for crop production for each size class of land possessed	A11
12	Distribution of households by household monthly per capita expenditure class for each category of the use of hired labour for productive enterprises other than crop production	A12-A13
13	Number of households with no literate member/female member of age 15 years & above per 1000 households by mpce class	A14-A24

<b>Table No.</b>	<b>Description</b>	<b>Page No.</b>
14	Number of households with no employed/unemployed (principal status) for each mpce class	A25-A28
15R	Per thousand distribution of households by household type for each sub-round for rural areas	A29
15U	Per thousand distribution of households by household type for each sub-round for urban areas	A30
16	Distribution of persons by household monthly per capita expenditure class for each age-group	A31-A36
17	Distribution of persons of age 10 years and above by marital status for each age group	A37-A42
18	Distribution of head of households by marital status for each broad age-group	A43-A45
19	Distribution of persons of age 5 years & above by general education for each age-group	A46-A51
20	Distribution of persons of age 15 years and above by technical education for each age-group	A52-A57
22	Distribution of persons of age 15 years and above by general education for each household monthly per capita expenditure class	A58-A63
23R	Per thousand distribution of persons of age 15 years and above by general education for each household type for rural areas	A64-A66
24	School attendance rates per 1000 persons by age group and household monthly per capita expenditure class	A67-A72
26R	School attendance rates (age 5-14) per thousand persons (5-14) by household type and household social group for rural areas	A73-A75
26U	School attendance rates (age 5-14) per thousand persons by household type and household social group for urban areas	A76-A78

<b>Table No.</b>	<b>Description</b>	<b>Page No.</b>
27	Distribution of persons by current attendance in educational institution and course of study for each age-group	A79-A84
28	Distribution of persons by type of skill possessed for each broad general education level	A85-A90
29A	Distribution of persons by age group for each principal usual activity category	A91-A96
29B	Distribution of persons by principal usual activity category for each age group	A97-A105
30A	Distribution of persons by age-group for each usual activity taking also into consideration the subsidiary economic status of persons categorised 'not working'	A106-A111
30B	Distribution of persons by usual activity category taking also into considerations the subsidiary economic status of persons categorised 'not working' for each age-group	A112-A120
31A	Distribution of persons of age 15 years and above by general education category for each principal usual activity category	A121-A126
31B	Distribution of persons of age 15 years and above by principal usual activity category for each general education category	A127-A135
32A	Distribution of persons of age 15 years and above by general education for each usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working'	A136-A141
32B	Distribution of persons of age 15 years and above by usual activity category taking also into consideration the subsidiary economic status if persons categorised 'not working' for each general education category	A142-A150
33	Per thousand distribution of workers (usual status 11-51) by sector (industry section) of work for each industry section of the household	A151-A162

<b>Table No.</b>	<b>Description</b>	<b>Page No.</b>
34	Per thousand distribution of 'usually working' by usual industry group and sex	A163-A176
35	Distribution of 'usually working' by usual occupation group and sex	A177-A178
36	Distribution of persons by usual activity category taking also into consideration the subsidiary status of persons categorised 'not working' for each household monthly per capita expenditure class	A179-A184
37R	Distribution of persons by usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working' for each household type for rural areas	A185-A187
37U	Distribution of persons by usual activity category taking also into consideration the subsidiary economic status by persons categorised 'not working' for each household type for urban areas	A188-A190
39R	Distribution of persons by usual activity category taking into consideration the subsidiary economic status of persons categorised 'not working' for each household land cultivated class for rural areas	A191-A193
40	Distribution of persons of age 15 years and above by usual activity category taking also into consideration the subsidiary economic status of persons categorised	A194-A199
41	Distribution of persons by usual subsidiary economic activity for each usual principal activity	A200-A205
42	Distribution of usually 'working' (principal and subsidiary status) by place of work for each age-group	A206-A223
43	Distribution of usually working (principal and subsidiary status) by place of work for each broad usual work activity status	A224-A229

Table No.	Description	Page No.
44	Distribution of persons (15-59 years) by status of employment registration & general education for age group and activity status (i) usual principal (ii) current weekly	A230-A241
45	Distribution of persons by current weekly activity for each sub-round	A242-A253
46	Distribution of persons-days by current daily activity for each sub-round	A254-A265
47	Distribution of persons by current weekly activity for each age-group	A266-A271
48	Distribution of persons-days by current daily activity each age-group	A272-A277
49R	Distribution of working person-days by type of operation for each broad current daily work activity for rural areas	A278
50	Distribution of person-days by current daily activity for each household monthly per capita expenditure class	A279-A284
51R	Distribution of person-days by current daily activity for each household type for rural areas	A285-A287
51U	Distribution of person-days by current daily activity for each household type for urban areas	A288-A290
52R	Distribution of person-days by current daily activity for each household land cultivated for rural areas	A291-A293
53	Distribution of person-days by current daily activity for each principal industry of the household	A294-A299
54	Distribution of persons of age 15 years and above by current weekly activity for each education category	A300-A305
55	Average wage/salary earnings (Rs. 0.00) per day received by regular wage/salaried employees (31, 71 & 72) of age 15-59 years by sector (industry)	A306-A311

Table No.	Description	Page No.
56R	Average wage/salary earnings (Rs. 0.00) per day received by regular wage/salaried employees (31, 71 & 72) of age 15-59 years by occupation groups and broad education category for rural areas	A312-A314
56U	Average wage/salary earnings (Rs. 0.00) per day received by regular wage/salaried employees (31, 71 & 72) of age 15-59 years by occupation groups and broad education category for urban areas	A315-A317
57R	Average wage earnings (Rs. 0.00) per day received by casual wage labourer by age-group, type of operations, sex and sub-round for rural areas	A318-A329
57U	Average wage earnings (Rs. 0.00) per day received by casual wage labourers by age-group, sex and sub-round for urban areas	A330-A335
58	Distribution of persons (5 years and above) other than usually unemployed who sought/were available for work for each principal usual activity	A336-A338
59	Distribution of persons working according to current weekly status by number of days with nominal work and number of days worked in a week	A339-A341
60	Distribution of persons in the labour force (11-82) according to current weekly activity status and average number of days worked in a week by number of days seeking/available for work (unemployed) in a week for each sub-round	A342-A347
61	Distribution of persons in the labour force (11-82) according to current weekly activity status by number of days worked in a week and average number of days seeking/available for work (unemployed) in a week for each sub-round	A348-A353
62	Distribution of person-days by current daily activity for each current weekly activity	A354-A383

Table No.	Description	Page No.
63	Distribution of person-days by current daily activity for each usual activity taking also into consideration the subsidiary economic activity for persons categorised not working in the principal status	A384-A398
64	Distribution of persons by current weekly activity for each usual activity category taking also into consideration the subsidiary status of persons categorised 'not working' in the principal status	A399-A401
75	Distribution of usual principal status employed(15+) by change in nature and/or establishment during last two years for each broad gen. education and usual activity status	A402-A407
76	Distribution of persons who have changed job(15+) by reason for change of job for each broad education and age group	A408-A413
77	Distribution of persons who have changed nature of jobs by reason for change for each of the occupation division last pursued	A414-A419
78	Number of persons who have worked more or less regularly per 1000 persons and per 1000 distribution of persons not worked more or less regularly by availability of work and period without work for each activity status and broad industry	A420-A437
79	Distribution of usually working persons (15 and above) who had sought or were available for additional work by duration and reason of search / availability for each activity status	A438-A449
80	Distribution of usually working persons (15 and above) who had sought or were available for alternative work by duration and reason of search / availability for each activity status	A450-A461
81	Distribution of usually working (ps+ss) persons (15+ ) by existence of trade union/associations in the enterprise and membership for each broad activity status	A462-A467
82	Distribution of regular employees(ps+ss) (15+ ) by nature of employer for each broad gen. education and number of permanent employees per 1000 regularly employed	A468-A470

## Chapter One

### Introduction

**1.0** The first comprehensive survey on employment and unemployment was carried out by the National Sample Survey (NSS) during the 9th round. Thereafter, the NSS has tried out different concepts and definition for its surveys on employment and unemployment. The Planning Commission, in the year 1970, set up an Expert Committee on Unemployment Estimates, popularly known as 'Dantwala Committee', to review the surveys so far carried out by the NSS and the indicators of employment and unemployment generated from the data collected through them and also to recommend suitable conceptual procedures for collection and analysis of employment and unemployment data. Following the recommendations of the committee, the first comprehensive survey on employment and unemployment was carried out during 1972-73 (27th round). Since then the survey on employment-unemployment has become a part of the quinquennial programme of NSS surveys and is carried out along with the survey on consumer expenditure on the same set of households. Three successive quinquennial surveys conducted in the 32nd (1977-78), 38th (1983) and 43rd (1987-88) rounds of NSS have more or less followed an identical approach in the measurement of employment and unemployment parameters. The present report is based on the fifth such survey which was carried out during July 1993 to June 1994 in the 50th round. Apart from these quinquennial surveys, NSSO has been collecting information on certain key items on

employment-unemployment from a limited set of households in every round since the 45th round as a part of the survey on consumer expenditure in order to build up a time series of the indicators of employment.

**1.1.** The basic approach in all these surveys was the collection of data to generate the estimates of employment-unemployment according to the 'usual status (us)' based on a reference period of one year, the 'current weekly status (cws)' based on a reference period of one week, and the 'current daily status (cds)' based on each day of the previous (reference) week. In order to reveal the multi-dimensional aspects of the employment-unemployment situation in India, information on several correlates were also gathered in these surveys. A set of probing questions to the persons engaged in household chores were also one of the basic features of these surveys.

**1.2.** In the present survey, apart from the collection of data on various aspects of employment, efforts were also made to collect data on the activity profile of children. This was done with the objective to make available useful information relating to child labour and its causes. The probing questions to the unemployed regarding their educational background, past employment, nature of efforts made and sectors in which employment is sought have added a new dimension to the present survey. The scope of the probing question to the employed in order to understand the extent of under utilisation of labour time

was further expanded to acquire more specific information from the employed. An effort was also made to collect information on the qualitative aspects of employment like occupational changes, availability of trade unions, nature of employer, etc. The detailed information on the various aspects of employment-unemployment, is proposed to be brought out through a series of reports on the subject, of which, this report is the first.

**1.3** The present report deals only with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with correlates. The report gives the results generated from the data of NSS 50th round survey of the central samples for all-India. The report also gives important results for the different states and union-territories. This report will be followed by a set of four reports covering the aspects of under-employment and participation of women in some specified activities relating to household chores, school enrollment and work participation of children, incidence of employment over

social groups and employment situation in cities and towns of India

**1.4 Geographical Coverage :** The 50th round survey covered the whole of Indian Union with the exception of certain interior areas of Nagaland and the Andaman & Nicobar Islands. Besides the above, only 3 out of the 14 districts of Jammu & Kashmir, could be surveyed. The districts surveyed are Jammu, Kathua and Udhampur and are included in the all-India estimates.

**1.5 Layout of the report :** After this introductory first chapter, the next chapter briefly gives the conceptual framework of the survey and the revisions/changes made for this survey. Chapter Three describes the sample design and estimation procedure. In Chapters Four to Nine of the report, the main findings of the survey are discussed. The tables giving the estimates for different states and union territories relating to each of these chapters are placed at its end. The results of the previous surveys are also incorporated, wherever possible, to get a comparable picture of the employment-unemployment situation over a period of time. Detailed all-India tables are given in Appendix.

## Chapter Two

### Conceptual Framework

**2.1** The NSSO surveys on employment and unemployment aim to measure the extent of 'employment' and 'unemployment' in quantitative terms disaggregated by various household and population characteristics. The persons surveyed are classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. Three reference periods are used in these surveys. These are (i) one year, (ii) one week and (iii) each day of the week. Based on these three periods three different measures are arrived at. These are termed as usual status, current weekly status, and the current daily status. The procedure adopted to arrive at these three measures are given below.

**2.2 Classification according to usual status.** In this approach the status of activity on which a person spent relatively longer time of the preceding 365 days from the date of survey is considered as the principal usual status activity of the person.

<b>Usual Status :</b> <b>Principal Status and</b> <b>Subsidiary Status</b>
--

Accordingly, a person is considered 'working

or employed' if the person was engaged for a relatively longer time during the past year in any one or more work-related activities (economic activities). The person is considered as 'seeking or available' for work or 'unemployed' if the person was not working but was either seeking or was available for work for a relatively longer time during the past year. If the person was engaged in any non-economic activities for a

relatively longer time of the reference year he/she is considered as 'out of labour force'. The specific activity category is determined on the basis of time spent criterion, i.e. the activity on which major time was spent being assigned as the usual status activity. A person categorised as 'worker' or 'employed' on the basis of the principal status is called a 'principal status worker' or 'principal status employed'. A person categorised as a non-worker (i.e. unemployed or out of labour force) who pursued some economic activity in a subsidiary capacity is called a 'subsidiary status worker' or 'subsidiary status employed'. These two groups viz. principal status workers and subsidiary status workers together constitute 'all workers' according to the usual status classification.

The various activity categories along with the codes used for usual status classification are given in the box below.

code	description
----	-----
<b>[activities for working(employed) persons]</b>	
11	worked in household enterprise (self-employed) as an own account worker
12	worked in household enterprise (self-employed) as an employer
21	worked in household enterprise as a helper
31	worked as regular salaried/wage employee
41	worked as casual labour in public works

- 51 worked as casual labour in other types of works

**[unemployed]**

- 81 seeking or available for work

**[out of labour force activities]**

- 91 attended educational institutions  
92 attended domestic duties only  
93 attended domestic duties and was also engaged in free collection of goods (vegetables, roots, fire-wood, etc. for household)  
94 rentiers, pensioners, remittance recipients, etc.  
95 not able to work due to disability  
96 beggars, prostitutes, etc.  
97 others  
99 infants of age 0-4 years.

Activities coded 11-51 are those applicable for persons who are classified as workers while 91-99 apply to those who are out of labour force. Detailed definitions of these categories are given elsewhere in this section. Code 81 is assigned to an unemployed.

**2.3 Classification according to current weekly status approach:** For classification of persons according to current weekly status approach, they are assigned a unique activity status with

**Current  
Weekly  
Status**

reference to a period of 7 days preceding the date of survey. This is easily done in the case of persons having only one status during the reference week. But for persons pursuing more than one activity a priority-cum-major time rule was applied to obtain a unique activity status. Under the priority rule, the status of working got priority over the status of not working but seeking/available for work. Further the status of not working but seeking/available for work got priority over the status of not working and not seeking/available for work. Within the broad category of working and not

working, the detailed activity category was assigned by major time spent criterion. Using this procedure in the current weekly status (cws) a person is considered working or employed if the person was engaged for at least one hour on any one day of the previous week on any work related(economic) activity. A person who had not worked for even one hour on any one day of the week, but had been seeking or had been available for work at any time for at least one hour during the week was considered 'seeking/available for work'. Others were considered 'not available for work' or as out of labour force. For working or employed besides the codes used for usual activity 4 additional codes were used to reflect the weekly situation. These were as follows:

- 61 did not work due to sickness though there was work in household enterprise  
62 did not work due to other reasons though there was work in household enterprise  
71 did not work due to sickness but had regular salaried/wage employment  
72 did not work due to other reasons but had regular salaried/wage employment For unemployed the codes were:

- 81 sought work  
82 did not seek but was available for work

For 'out of labour force' one additional code was used as:

- 98 did not work due to sickness (for casual workers only)

## 2.4 Classification according to current daily status approach :

### Current Daily Status

The activity pattern of people particularly in the unorganised sector is such that a person might be pursuing more than one activity during a week and sometimes even during a day. In the current daily status (cds), upto two activity statuses were assigned to a person on each day of the reference week. The unit of classification was thus 'half day' in the cds. In assigning the activity status on a day, a person was considered working for the entire day if he had worked 4 hours or more during the day. If he had worked one hour or more but less than 4 hours, he was considered working (employed) for half day and seeking/-available for work (unemployed) or not available for work (not in labour force) for the other half day depending on whether he was seeking /available for work or not. On the other hand, if a person was not engaged in any work even for one hour but was seeking or available for work for 4 hours or more, he was considered unemployed for the entire day. If he was available for work for less than 4 hours only, he was considered unemployed for half day and not in labour force for the other half of the day. A person who neither had any work to do nor was available for work even for 'half' of the day was considered not in labour force for the entire day and was assigned one or two non-economic activity status codes . The aggregate of person days classified under the different activity categories for all the seven days gave the distribution of person days by activity category during an average week over the survey period of one year. The codes used for describing the various activity categories under the cds were the same as those used for current weekly status classification.

2.5 As can be seen in the above paragraphs, central to the concept of identifying a worker is the engagement in any economic activity. The concept of economic activity as used in the NSS is explained now.

Economic activity is any activity that results in production of goods and services that adds value to national product. Such activities include production of all goods and services for market i.e. production for pay or profit and the production of primary commodities for own consumption and own account production of fixed assets, among the non-market activities. The entire spectrum of human activity falls in two categories: economic and non-economic activities. The economic activities have two parts:- market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e. activity performed for pay or profit. These are essentially production of goods including those of Government services etc. Non market activities are the production for own consumption of primary products and own account production of fixed assets. The full spectrum of economic activities as defined in the UN system of National Accounts is not covered in the definition adopted for the current survey or in the previous surveys. The term economic activity as adopted in the 50<sup>th</sup> round survey include:

### Concept of economic activity

- i) All the market activities described above i.e. the activities performed for pay or profit which result in production of goods and services for exchange.

ii) Of the non-market activities,

a) all the activities relating to the agricultural sector (industry section 0 of NIC 1987) which results in production (including gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) of agricultural produce for consumption and

b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets include construction of own houses, roads, wells, etc., and of machinery, tools etc. for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own-account construction either in the capacity of a labour or a supervisor.

**2.6** In this context, it may be noted that hitherto in NSS the term used was 'gainful activity'. The above definition is very close to the 'gainful activity' concept except for the inclusion of own-account production of fixed assets. The contribution of this component was found to be negligible from a separate tabulation of this component in the 43<sup>rd</sup> round survey and as such the comparability of the survey results will be unaffected by this change.

**2.7** According to the international standards the term 'economically active population' comprises of persons of either sex who furnish the supply of labour for production of goods and services as defined in the United Nations system of national accounts and balances during a specified time reference period. According to these

systems, the production of goods and services includes all production and processing of primary products, whether for market, for barter or for own consumption, the production of all other goods and services for the market and, in the case of households which produce such goods and services for the market, the corresponding production for own consumption.<sup>1</sup> The definition adopted in the NSS follow the above approach very closely except for the 'processing of primary commodities for own consumption by the producers of these items' which is not covered by the NSS definition. Further the international standards use the term 'economically active population' as a generic term and use two other measures viz. the 'usually active population' in relation to a long reference period such as a year and the 'currently active population' measured in relation to a short reference period such as a week or a day. Generally the term 'labour force' is used to denote the currently active population. In this report the term labour force is meant to imply the population comprising the employed and the unemployed. In conventional terms, the employed, unemployed and those in the labour force are defined as follows.

**2.8 Workers or employed :** Persons who are engaged in any economic activity or who despite their attachment to economic activity have abstained for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work constitute workers.

---

<sup>1</sup> *Surveys of economically active population, employment, unemployment and underemployment: An ILO manual on concepts and methods, I L O , Geneva, 1990.*

Unpaid helpers who assist in the operation of an economic activity in the household farm or non-farm activities are also considered as workers.

**2.9 Seeking or available for work or unemployed :** Persons who owing to lack of work had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing condition of work and remuneration are considered as those 'seeking or available for work or as unemployed'.

**2.10 Labour force and those out of labour force :** Persons who are either 'working' or seeking or available for work (i.e. unemployed) during the reference period constitute the labour force. Persons who were neither working and at the same time were not seeking nor available for work during the reference period are considered to be 'out of labour force'. The persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled, too young or too old, prostitutes, smugglers etc., and casual workers not working due to sickness etc.. However a domestic servant who is considered as a member of the employer's household is treated as a worker though he/she may be performing only household chores.

**2.11** The status of persons engaged in various economic activities are classified as follows.

**2.12.1 Self-employed in household enterprises:** Persons who operate their own farm or non-farm enterprises or are engaged in-

dependently in a profession or trade on own-account or with one or a few partners are self-employed in household enterprises. The essential feature of self-employment is that the remuneration is determined wholly or mainly by sales or profits of the goods or services which are being produced. The self-employed persons are further categorised into three groups.

**(a) own-account workers:** They are the self-employed persons who operate their enterprises on their own account or with one or a few partners and who during the reference period by and large, run their enterprise without hiring any labour. They may, however, have unpaid helpers to assist them in the activity of the enterprise.

**(b) employers:** The self-employed persons who work on their own account or with one or a few partners and by and large run their enterprise by hiring labour.

**(c) helpers in household enterprises:** The helpers are mostly family members who keep themselves engaged in their household enterprises, working full or part time and do not receive any regular salary or wages in return for the work. They do not run the enterprise on their own, but assist the related person living in the same household running the enterprise. Here it is to be noted that a departure was made in the case of identifying 'helpers' from the earlier surveys. Persons who worked in the capacity of 'helpers' but had a share in their family earnings were not considered as 'helpers' in the earlier rounds, but are considered so in the present survey.

### 2.12.2 Regular salaried/wage employee:

Persons working in other's farm or non-farm enterprises, both household and non-household, and getting in return salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are the regular salaried/wage employees. This category not only includes persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

**2.12.3 Casual labour:** A person casually engaged in other's farm or non-farm enterprises (both household and non-household) and getting in return wage according to the terms of the daily or periodic work contract is a casual labour. Depending on whether they are so employed in 'public works' sponsored by Govt. agencies or local bodies or in other types work, the casual workers are classified into the two groups viz. Casual labour in public works and casual workers in other types of work.

**2.13** Certain other terms related to the different types of 'labour' are now explained.

**2.14 Manual work :** A job essentially involving physical labour is considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific, or technical education are not termed manual work. On the other hand, jobs *not* involving much of physical labour and at the same time not requiring much educational background as above, are treated as manual work. Thus engineers, doctors etc. are not considered as manual workers even though their jobs involve

some amount of physical labour. But peons, chowkidars, watchman, etc. Are considered as manual workers even though their work involve much less physical labour. In the NSS, the manual work is specifically defined as work pursued in one or more of the following occupational groups of the National Classification of Occupations.(1968):

Division 5 - Service workers:

Group 52,53,54,55,56 and family 570,574,579

Division 6 -Farmers, Fishermen, Hunters, loggers, and related workers:

Group 63,64,65,66,67,68

Division 7-8-9 : production and related workers, Transport equipment operators and labourers.

**2.15 Wage paid manual labour :** A person who does manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) is a wage paid manual labour. Persons who are self employed doing manual work is not treated as a wage paid manual labour.

**2.16 Agricultural Labour :** A person is considered engaged in agricultural labour if he/she follows one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

- (i) farming
- (ii) dairy farming
- (iii) production of any horticultural commodity
- (iv) raising of livestock, bees or poultry
- (v) any practice performed on a farm as incidental to or in conjunction with farm

operations (including forestry and timbering) and the operation for market and delivery to storage or to market or to carriage for transportation to market of farm produce. Carriage for transportation refers to the first stage of the transport from farm to the first place of disposal. Working in fisheries is excluded from agricultural labour.

**2.17 Rural labour :** Manual labour, living in rural areas, working in agricultural and/or non-agricultural occupations in return for wages paid either in cash or in kind (excluding exchange labour) is considered as rural labour. Thus rural labour includes both agricultural labour and other labour.

**2.18** Some of the other important terms used in the survey are now explained.

**2.19 Skill :** Any marketable expertise however acquired, irrespective of whether marketed or not, whether the intention is to market it or not, is considered as a skill.

**2.20 Nominal work :** Work done by a person for 1-2 hours in a day is said to be a day with nominal work. In the daily time disposition record, such days are given half intensity in accounting.

**2.21 Earnings :** Earnings refer to the wage/salary (and not total earnings) receivable for the wage/salaried work done during the reference week by the wage/salaried employee and casual labourers. The wage/salary may be in cash or kind or partly in cash and kind. The kind wages are evaluated at the current retail price. Bonus and perquisites evaluated at the retail prices and duly apportioned for the reference week are also included in earnings. However, amount receivable as 'over

time' for the additional work done beyond normal working time is ignored.

**2.22 Cultivation :** All activities relating to production of crops and related ancillary activities are considered as cultivation. Growing of trees, plants or crops as plantation or orchards (such as rubber, cashew, coconut, pepper, coffee, tea etc.) are not considered as cultivation activities for the purpose. In general, the activities covered under industry groups 000-008 are considered as cultivation.

**2.23 Procedural changes in the present survey:** Apart from the changes in the definition and classification of the economically active persons mentioned above, a few other procedural aspects introduced in the classification of usual status and current weekly and daily status are explained now. These changes, it may be seen, do not in any way affect the comparability of the survey estimates with that of the previous rounds.

(a) In the past, for the identification of the usual status based on the major time criterion, a trichotomous classification of the population was followed. i.e. a person is classified into one of the three broad groups 'employed', 'unemployed' and out of labour force' based on the major time criterion. In this round, the procedure prescribed is a two stage dichotomous procedure which involves a classification into 'labour force' and 'out labour force' in the first stage and thereafter the labour force into 'employed' and 'unemployed' in the second stage. While this could marginally affect the principal and subsidiary classification theoretically, it can be seen that

the 'all workers' would remain the same.

(b) Previously the current weekly status of a person was first assigned on the basis of the response to a direct question on his/her participation in economic activities during the week and thereafter the daily time disposition data was collected from all those who were in the labour force (i.e. employed plus unemployed). Experts and users have been feeling that this procedure may, in some cases, lead to undetection of marginal participation of women in the household based economic activities, particularly in the rural areas. The procedure of data collection, therefore, was changed for the 50th round. In this round, the daily time disposition was collected first from all the persons in the household and the current weekly status was recorded on the basis of the daily time disposition during the week.

**2.24 Data collected and survey instruments<sup>2</sup>** : The data for this survey was collected in the NSS Schedule 10 used for employment surveys. For this round, the schedule had 8 core blocks. Household characteristics like, household size, principal industry-occupation, social group, land possessed and cultivated, use of hired labour, monthly per capita expenditure etc. were recorded in Block 3. In the next Block the detailed demographic particulars including age, sex, educational level school attendance, principal and subsidiary statuses, the industry, occupation of the employed, distance to place of work etc.

were recorded. Block 5 was used to record the daily time disposition. Apart from recording the different activities from among the various status codes explained in the earlier part of this section, the industry and type of 'operation' for rural areas were also recorded. For a day a maximum of two activity statuses could be recorded, an activity status getting an intensity of 'half or full' depending on the time spent on it. No limits on the number of activities that could be reported in a week was specified. The current weekly status of the person derived from the various daily activity statuses followed in the week and the corresponding industry-occupation was also recorded in this block. Besides the above, the wage and salary earnings were also entered in this block. Block 6 was used to record the answers to certain probing questions to the unemployed. The unemployed for this purpose were those who had not worked on any day of the reference week. These probing questions included among other things the academic performance, particulars of work sought, details of past employment, reasons for unemployment, length of spell of unemployment, type of efforts made etc. Further probing questions on the usually employed on the qualitative aspects of employment were made in Block 7. These included occupational mobility, availability for additional work and reasons, extent of underutilisation of labour time, membership of trade unions, nature of employer, permanency

---

<sup>2</sup> *Instructions to field staff Vols I & II, NSS 50th round: Department of Statistics, New Delhi, June 1993.*

of employment etc.. A major innovation in this survey was the attempt to specifically collect information on the activity profiles of children. In order to build up the profile, the school attendance status of the children, reason for non-attendance, extent of participation in household chores, information on the type of work done and the industry in which worked, reason for working, economic benefits derived by the household from such work , its effect on studies etc.

were ascertained for all children aged in the 5-14 years age group in the sample household. All this information was recorded in Block 8. In Block 9, the follow up questions were asked to or about those who reportedly were engaged in domestic duties. This block was canvassed as in the previous surveys . Block 10 was canvassed as part of the rural labour enquiry being undertaken for the Labour Bureau by the NSSO and which is integrated with the employment survey.

## Chapter Three

### Sample Design And Estimation Procedure

**3.1** The sample design adopted for this round of survey was similar to that followed<sup>1</sup> in the past surveys in its general aspects. The general scheme was a stratified two- stage design with the first stage units being villages in the rural areas and urban frame survey blocks (UFS) in the urban areas. The second stage units were the households.

**3.2 Sampling frame for first stage units:** The frame used for selection of first stage units in the rural sector was the 1991 census list of villages for all the four sub-rounds for 8 states/u.t.s viz. Andhra Pradesh, Assam, Kerala, Madhya Pradesh, Orissa, Uttar Pradesh, West Bengal and Chandigarh. However for Agra district of U.P. and the three districts, viz. Durg, Sagar, and Morena of M.P., samples were drawn using 1981 census list of villages. For Jammu & Kashmir samples for all the 4 sub-rounds were drawn using the 1981 census list as the 1991 census was not conducted in the state. For the remaining 23 states/u.t.s, the frame was 1991 census list for subrounds 2 to 4 and 1981 census list for sub-round 1 as the 1991 census list was not available for use at the time of drawing the samples. As usual, for Nagaland the list of villages within 5 kms. of the bus route and for Andaman and Nicobar Islands the list of accessible villages constituted the frame. In the case of urban sector the frame consisted of the UFS blocks and, for some newly declared towns where these were not available, the 1991 census enumeration blocks were used.

**3.3 Region formation and stratification:** States were divided into regions by grouping contiguous districts similar in respect of population density and cropping pattern. In rural sector each district was treated a separate stratum if the population was below 2 million and where it exceeded 2 million, it was split into two or more strata. This cut off point of population was taken as 1.8 million (in place of 2 million) for the purpose of stratification for districts for which the 1981 census frame was used. In the urban sector, strata were formed, within each NSS region on the basis of population size class of towns. However for towns with population of 4 lakhs or more the urban blocks were divided into two classes viz. one consisting of blocks inhabited by affluent section of the population and the other consisting of the remaining blocks.

**3.4 Selection of first stage units:** Selection of sample villages was done circular systematically with probability proportional to population and sample blocks circular systematically with equal probability. Both the sample villages and the sample blocks were selected in the form of two or more independent sub-samples. In Arunachal Pradesh the procedure of cluster sampling has been followed. Further large villages/blocks having present population of 1200 or more were divided into a suitable number of hamlet- groups/ sub-blocks having equal population content. Two hamlet- groups were selected from the larger villages while one sub-block was selected in urban sector for larger blocks.

---

<sup>1</sup> *Sampling Design and estimation procedure for 50th Round NSS (Mimeographed, National Sample Survey Organisation, 1994)*

**3.5 Selection of households:** While listing the households in the selected villages, certain relatively affluent households were identified and considered as second stage stratum 1 and the rest as second stage stratum 2. A total of 10 households were surveyed from the selected village/hamlet-groups, 2 from the first category and remaining from the second. Further in the second stage stratum-2, the households were arranged according to the means of livelihood. The means of livelihood were identified on the basis of the major source of income as i) self-employed in non-agriculture, ii) rural labour and iii) others. The land possessed by the households was also ascertained and the frame for selection was arranged on the basis of this information. The households were selected circular systematically from both the second stage strata.

**3.6** In the urban blocks a different method was used for arranging the households for selection. This involved the identification means of livelihood of households as any one of a) self-employed, b) regular salaried/wage earnings, c) casual labour, d) others. Further the average household monthly per capita consumer expenditure (mpce) was also ascertained. All households with MPCE of (i) Rs. 1200/- or more (in towns with population less than 10 lakhs or (ii) Rs. 1500/- or more (in towns with population 10 lakh or more) formed second-stage stratum 1 and the rest, second-stage stratum 2. The households of second-stage stratum 2 were arranged according to means of livelihood class and MPCE ranges before selection of sample households. A total of 10 households were selected from each sample block as follows

(i) For affluent strata/classes : 4 households from second-stage stratum 1 and 6 households from second-stage stratum 2,

(ii) For other strata/classes : 2 households from second stage stratum 1 and 8 from second-stage stratum 2. Households were then selected circular systematically with a random start. Shortfall in the required number of household in any second-stage stratum was made up by increasing the quota for the other second stage stratum.

**3.7 Work programme:** The survey period of one year was divided into four sub-rounds of three months duration each as below.

#### Period of survey for the four sub-rounds

sub-round	period of survey
1	July-September, 1993
2	October- December, 1993
3	January-March, 1994
4	April-June, 1994

Equal number of sample villages and blocks was allotted for survey in each of these sub-rounds. However in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland, the restriction of surveying the allotted households during the sub-round period was not strictly enforced.

### 3.8 No. of villages/blocks and persons surveyed:

The number of villages/blocks and persons surveyed was undertaken in the districts of Jammu, Kathua and Udhampur only. The

\* 26 nucleus villages were allotted.

villages/blocks and persons surveyed in different States and Union Territories is given in Table 3.8. The information relates to all the sub-rounds covered. As reported in para 1.4 in Jammu and Kashmir the survey work was

remaining 9 districts were not surveyed. Therefore the estimates pertaining to all India and Jammu and Kashmir will be exclusive of these districts.

### 3.9 Estimation Procedure

**3.9.1 Estimation of aggregates at sub-sample level** : Aggregates are first estimated at sub-sample level according to the following estimation formulae, where  $\bar{y}$  denotes the estimate - based on one sub-sample - of the aggregate of a given characteristic Y for the rural sector of a state/u.t.

For the rural sector of Arunachal Pradesh,

For the urban sector of a state/u.t.,

$$\bar{y} = \sum_s \frac{1}{n_s} \sum_i \frac{P_{si} D_{si}^*}{p_{si}} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

$$\bar{y} = \sum_s \frac{1}{n_s} \sum_{i=1}^{n_s} N_{si} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

where

y : observed value of the same characteristic in a sample household

$$\bar{y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

s : stratum suffix

t : second-stage stratum suffix

i : sample village/block suffix

j : sample household suffix

D : number of hamlet - groups / sub-blocks formed in the surveyed village/block

H : number of households listed in the second- stage sampling frame

h : number of sample households surveyed

p : population of sample village as in the sampling frame

N : for the urban sector, number of blocks in the sampling frame

n : number of sample villages/blocks surveyed in this sub-sample

P<sub>si</sub> : population of the s-th stratum as per frame used in the selection of i-th sample village of the stratum

N<sub>si</sub> : for Arunachal Pradesh, number of sample villages in the sampling frame for s-th stratum which was used in selection of i-th sample village of the stratum

D\* : equals 1, if D = 1  
equals D/2, if D > 1

### 3.9.2 Estimation of aggregates for the combined sample (pooling sub-samples) :

The combined sample estimate of an aggregate is obtained as the simple average of the corresponding sub-sample estimates.

**3.9.3 Estimates of ratios** : The estimate of a ratio of the form  $R = Y/X$ , where Y and X are the population aggregates of two characters, is obtained as

where  $\bar{y}$  and  $\bar{x}$  are estimates of Y and X obtained according to the procedure laid down in para 3.9.1. Examples of ratio estimates are rates and percentages.

$$\bar{R} = \frac{\bar{y}}{\bar{x}}$$

## Chapter Four

### Households and Population

**4.0. General :** The NSS 50th round survey, as mentioned earlier, was conducted during July 1993-June 1994. The employment-unemployment situation cannot be evaluated without looking into the socio-economic structure of the households and the demographic pattern of the population of the country during that time. Therefore, certain information on socio-economic condition of sample households and demographic data pertaining to the surveyed individuals were also collected in this survey. In this chapter, the main findings relating to socio-economic condition of the households and demographic features of the population are presented. The estimates are given for India and its constituent states and union territories

However, the ratios obtained from the surveys are expected to be much closer to the true situation. Thus the marginal aggregates of population or households presented in the detailed tables of the Appendix may be used only for combining ratios. Estimated number of persons or households under any particular classificatory characteristic may be obtained by applying the relevant survey-based ratio to the projected population.

**4.2 Estimates of households and population :** The survey has estimated about 778 million population living in 163 million households in India. About 73 per cent of the households belonged to rural India accounting for nearly 75 per

**Table 4.2 : Average household size (0.0) and sex-ratio (females per 1000 males) over the period of NSS surveys.**

all-India

NSS Survey period	rural		urban	
	hh. size	sex-ratio	hh. size	sex-ratio
(1)	(2)	(3)	(4)	(5)
1977-78	5.2	959	4.9	904
1983	5.1	963	4.7	905
1987-88	5.1	948	4.7	912
1993-94	4.9	944	4.4	905

with an effort to give a more detailed picture at the all-India level. Discussion is mainly centered around the all-India estimates. A comparison with similar survey results is also done in some cases, at the all-India level.

**4.1 Use of estimated aggregates :** Generally, the population estimates obtained from the NSS surveys are found to be lower than those of the census or projections. The differences are mainly due to differences in coverage and methods adopted in the NSS in comparison to the census operation.

cent of total population. On an average, 4.8 persons lived in an Indian household with a sex ratio of 934. The average household size for the rural is 4.9 which is little higher than the urban average of 4.4. For every 1000 males, the number of females was more in the rural (944) as compared to its urban areas (905). Table 4.2 gives the household size and sex ratio (number of females per 1000 males) over the years upto 1993-94. The household size in both the rural and urban areas and sex-ratio in the rural areas are seen to decline gradually over the periods. However, in urban areas, the sex-ratio

remained almost constant over the years except during 1987-88.

**4.2.1** Information on sex of the head of household was collected in the survey. Number of female-headed households per 1000 household (sex-ratio) and household size for female-headed households during 1987-88 and 1993-94 are shown in Table 4.2.1 for all-India. It is observed that during 1993-94, about 10 per cent of households were headed by females in both rural and urban India. Compared to all households, they had on an average a relatively smaller household size and a much higher sex-ratio. In the female-headed households, the household size has declined between 1987-88 and 1993-

94 as in the case of all households. On the other hand, the sex-ratio in the female headed households in rural India shows a rise while in the urban it has remained stable.

**4.2.2.** Similar results for each state and union territory are presented in Table 4.2.2. The proportion of female-headed households was the highest in Lakshadweep. Among the major states, the proportion was highest in Kerala, rural Himachal Pradesh, Tamil Nadu and rural Karnataka. The all-India feature of small household size and high sex-ratio in female-headed households was observed in all the states and union territories.

**4.3 Household type:** The nature and type of work, from which a household derives its major income, is an important indicator of the activity pattern of its members. Every sample household was, therefore, categorised into 'household types', depending on the major economic activity of the household during the 365 days preceding the date of survey. In Table 4.3 is given the distribution of

on self-employment. They constituted about 55 per cent of the rural population. About 35 per cent of the rural population belonged to rural labour households which formed 38 per cent of all rural households. Among urban households, regular employment was the mainstay of 43 per cent of households with an equal share of urban population. Nearly 34 per cent of the urban households had income

\* 'all hhs.' include 'not recorded' cases also.

households and the corresponding population by household type for all-India. During 1993-94, about half of the rural households were mainly depending

mainly from self-employment. There had been a fall in the proportion of rural households depending on self-employment between 1983 and 1987-88

and thereafter, it had remained at the same level. The proportion of agricultural labour households had maintained a constant level (30 per cent) during this period.

**4.3.1** The distributions of households and population by household type are given in Tables 4.3.1 and 4.3.2, respectively, for different states and union territories. In the rural areas, 'self-employment' was the major activity of the households. Among the major states, the proportion of self-employed households was highest in Himachal Pradesh (71 per cent) followed by Uttar Pradesh (67 per cent), Rajasthan (65 per cent), Haryana and Madhya Pradesh (55 per cent). On the other hand, regular employment was the main activity of urban households in most of the major states. About 54 per cent of the urban households in Maharashtra were found to depend on regular employment. The states following Maharashtra were West Bengal (50 per cent), Punjab (49 per cent), Assam

urban areas was highest in Uttar Pradesh (46) and Kerala (29), respectively.

**4.4 Monthly per capita expenditure (MPCE)** : Household income or for that matter 'level of living' is highly related with 'employment' of the household members. Thus the distribution of households and population by income level is an useful background information for a correlative study on 'employment' or 'unemployment'. The collection of reliable income data being difficult, the NSSO in its quinquennial surveys, collects data on employment-unemployment along with data on consumer expenditure from the same set of households. Based on the data, monthly per capita expenditure is worked out for each sample household which serve as a close proxy for income. Distribution of households and the corresponding population thus generated by MPCE class are given in Table 4.4 for all-India and in Table 4.4.1 for states and union

Table 4.4 : Per 1000 distribution of households and population by MPCE (Rs.) class

Source : Table 3R, 3U, 16R, 16U

and Madhya Pradesh (46 per cent). The percentage of 'self-employed' households and 'casual labour' households in the

territories. In urban India, about 50 per cent of the households accounting for nearly 60 per cent of the population spent less than Rs. 410/- per month per person.

On the other hand, in rural India, about 55 per cent of the households accounting for 60 per cent of the population, could spend a maximum of Rs. 265/-. In the higher spending bracket, while, the proportion of households spending Rs. 560/- or more was as low as 7 per cent in rural India, it was a little above 27 per cent in urban India.

#### 4.5 Households and particulars of land

: In rural India a majority of the households depend mainly on agricultural activities and in turn depend on land. Thus, land being the main source of employment for them, it is important to study the particulars of land ownership, possession and cultivation of land by the rural households.

**4.5.1 Ownership of land:** So far as the ownership of land is concerned, information on type of land owned like, whether land owned; if owned whether

of land owned is shown for each household type at the national level. During 1993-94, about 6 per cent of the households did not own any land and 30 per cent owned only homestead land. The situation was the worst for 'other labour' households - about 61 per cent of them were either owning homestead land only or did not own any land. On the other hand, 95 per cent of households depending on self-employment in agriculture owned both homestead as well as other land. Among the major states, (Table 4.5.1.1) the proportion of rural households not owning any land or owning only the homestead land was as high as 60 per cent in Tamil Nadu with 13 per cent of households not owning any land. The states following Tamil Nadu were Punjab (59 per cent), Haryana and Andhra Pradesh (48 per cent) and Gujarat (44 per cent).

**4.5.2 Land possessed :** In 1993-94, the

Table 4.5.1 : Per 1000 distribution of rural households by type of land owned for each household type

Source : Table 4R						

owned homestead land only, or homestead and other land, etc. were collected in the survey. In Table 4.5.1, the distribution of rural households by types

average area of land possessed by a rural household was 1 hectare. The corresponding average for a female-headed household was 0.5 hectares (see

Table 4.5.2). As high as 72 per cent of the households possessed 1 hectare or less of land and 13 per cent were landless. In rural Kerala, only 6 per cent of the households were found to possess 1 hectare or more of land and the average land possessed was as low as 0.30 hectares - the lowest among the major states. The states that ranked just above Kerala were Tamil Nadu (0.40 hectares), West Bengal (0.43), Bihar (0.71) and Orissa (0.74). The state with highest average land possessed was Rajasthan (2.64 hectares).

of the reasons may be the reduction of holding size possibly due to fragmentation. The relevant results based on the 50th round survey for different states and union territories, are presented in Table 4.5.3.1. The major states where 60 per cent of rural households had no cultivated land during the agricultural year 1992-93 were Kerala (69), Tamil Nadu (63) and Punjab (62). This percentage was lowest in Himachal Pradesh (13) followed by Rajasthan (19), Uttar Pradesh (23) and Madhya Pradesh

**Table 4.5.3 : Per 1000 distribution of rural households by size class of land cultivated during the agricultural year**

4.01 & above	70	58	43	97	82	61
total	1000	1000	1000	1000	1000	1000

**4.5.3 Land cultivated :** For the purpose of the survey, land cultivated was defined as the net area sown during the agricultural year 1992-93 i.e. July 1992 to June 1993. The distributions of rural households by size class of land cultivated, according to the 50th, 43rd (1987-88) and 38th (1983) rounds are presented in table 4.5.3. During the agricultural year 1992-93, more than one-third of the rural households did not cultivate any land. About 75 per cent were found to cultivate 1 hectare or less of land while on the date of survey, about 72 per cent of the rural households possessed 1 hectare or less of land. Over the years, the distribution has shifted towards the lower size classes, that is, an increasing proportion of households have shifted gradually to the lower size classes. One

(24).

**4.5.4 Use of hired labour for crop production :** As in 38th and 43rd round surveys, in the 50th round also information on the use of hired labour by the rural households for crop production activities was collected. Based on this information, the rural households have been distributed by 'use of hired labour' for crop production and the relevant results relating to rural India are presented in Table 4.5.4 along with the similar results obtained from the 38th and 43rd round surveys. The estimates for different states and union territories have been presented in Table 4.5.4.1. It is observed that nearly 40 per cent of rural households had no crop production during the agricultural year 1992-93. In the same agricultural year, of the households that

had some crop production, 46 per cent did not use any hired labour as against 51 per cent in the agricultural year 1982-83. Over the periods 1983 to 1994, although no consistent pattern in the use of hired labour for crop production was observed, there had been a marginal fall in the proportion of rural households having crop production and also of households having crop production without the help of hired labour in 1993-94. Perhaps, the

on this sector was about 73 per cent during 1983 (excluding about 4 per cent considered for 'others' sector which was clubbed with 'agriculture'), which declined to 71 per cent in 1987-88 and thereafter remained stable upto 1994. This fall was accounted for mainly by an increase in the share of construction activities and services. In urban India, on the other hand, although the pattern seems to be almost stationary over the period

Table 4.5.4 : Per 1000 distribution of rural households by use of hired labour for crop production during the agricultural year			
all-India			
use of hired labour for crop production	all households		
	1982-83	1986-87	1992-93
(1)	(2)	(3)	(4)
regular	47	45	36
during peak season only	140	196	204
casual	123	101	89
no hired labour	319	288	277
no crop production	371	370	394

fall is due to the reduction in holding size day by day making it less viable for crop production and hiring of labour becoming more expensive.

**4.6 Household principal industry :** The sector (or industry) of work which accounted for maximum income from economic activity pursued by the household members during the 365 days preceding the day of survey, was defined as the principal industry of the household. Households which had no income from economic activity were classified in the group 'others'. Table 4.6 gives the distribution of households by household principal industry. The corresponding distribution obtained from the 38th (1983) and 43rd (1987-88) round surveys are also given in this table for all-India. As usual, agriculture is found to be the principal sector (industry) of activity in rural areas on which a majority of the households depend for their livelihood. The proportion of households depending

1983 to 1994, there was a marginal fall in the proportion for 'manufacturing' sector and an increase in 'construction', 'trade' and 'service' sectors. The distribution for states and union territories, given in Table 4.6.1, reveals a considerable variation over the states and sectors of activities. So far as 'agriculture' sector is concerned, in the rural areas of major states, Madhya Pradesh topped the list with 85 per cent of its households reporting agricultural activities as the major source of income. The other major states reporting 71 per cent or more agricultural households, that is, above the all-India average, were Bihar (78), Karnataka (76), Maharashtra (74), Orissa, Assam and Andhra Pradesh (72). In urban Himachal Pradesh, as high as 20 per cent of the households reported 'others' sectors as the major source of income - this being the highest among the major states.

#### 4.7 Literacy of household members :

Literacy, together with educational attainment, determines the quality of population and is highly related to one's employment prospects. For the purposes of this survey, a person who could read and write a simple message in any language with understanding was considered a literate. Literates were again classified according to their levels of educational attainment. The discussion here is restricted to persons in the age-group 15 years and above. The proportion of households with no literate member, classified by household type, is given in Table 4.7 for India as a whole, and in Table 4.7.1 for different states and union territories. In India, in as many as 37 per cent of the households in the rural and 14 per cent in the urban areas, there was not a single member in the age-group 15 years and above who could read and write a simple message with understanding, that is, all the members of age 15 years and above in those households were illiterate. Further, as high as 68 per cent of the rural and 40 per cent of the urban households had no literate female member. These proportions are found to be highest among

the 'agricultural labour' households in the rural and 'casual labour' households in the urban areas. The statewise variations in these proportions were quite significant. Among the major states, the proportion of households with no literate member (15 yrs. and above) varied from 51 per cent (Andhra Pradesh) to 4 per cent (Kerala) in the rural areas and from 21 per cent (Bihar) to 1 per cent (Kerala) in the urban areas. Kerala is the most literate state in India, where the proportion of households having no literate member is the lowest.

#### 4.8 Households with usually employed (Principal status) of age 15 years and above :

Income of a household, obviously depends on the number of employed persons in the household. Though income depends also on the type of work by the members, the number of employed persons in a household can serve as a broad indicator of its economic condition. The results giving the distribution of households by number of usually employed persons of age 15 years and above are presented in Table 4.8 for all-India. The corresponding results obtained from the 43rd round survey have

also been shown in parentheses to see the change over the period 1987-88 to 1993-94. It may be noted that persons employed in the principal status only were considered, as the income from subsidiary status employment was expected to be relatively much less as compared to the income from principal status employment. During 1993-1994, about 3 per cent of the rural households and 8 per cent of the urban households had no usually employed member, while about 66 and 39 per cent of rural and

households had only 1 female worker in the household, as high as 46 per cent of rural and 28 per cent of urban households with females as head depended on one woman worker.

**4.8.1** Over the period 1987 to 1994, the number of usually employed in a household appears to have improved in rural India. The proportion of households with no worker declined from about 5 per cent in 1987-88 to 3 per cent in 1993-1994 in rural India - the urban proportion

<b>Table 4.7 : Number of households with no literate member/female member of age 15 years and above per 1000 households</b>

urban households respectively, had two or more members employed more or less regularly. On the other hand, in the households where the head was a female, the proportion of households with no usually employed member was considerably higher - 17 per cent in the rural areas and 32 per cent in the urban areas of India. It may be interesting to note that while 4 to 5 per cent of the

being stable at the level of 8 per cent. Altogether, the distribution is found to shift towards an increasing number of workers in a household, indicating an improvement in the employment situation. The relevant results for different states and union territories are presented in Table 4.8.1. The all-India pattern is revealed in the states and union territories.

Note : Figures in parentheses are the corresponding estimates obtained from the 43rd round (1987-88)

**4.9 Age distribution of population:** Age and sex are the two important demographic characteristics. The distribution of population by age-group and sex as background information can help in better understanding of the results on employment-unemployment. In Table 4.9, the distribution of the rural and urban population by age-group is presented for males and females separately. Comparable results based on the 43rd round (1987-88) survey are also presented

in this table. During the six years that separate the two surveys, a small shift is observed in the population especially from the younger age-groups. The percentage of children is seen have reduced for all the categories. The results present a consistent pattern as far as the cohorts of the previous survey (1987-88) is concerned. The corresponding distributions for different states and union territories are given in Table 4.9.1 for each sex by sector.

Table 4.9 : Per 1000 distribution of population by five year age groups

#### 4.10 Educational level of population:

As mentioned in para 4.7, educational attainment determines the quality of a population and one's employment prospect. Thus it is important to study the distribution of population by educational attainment (level) before a comprehensive

obtained from the past quinquennial surveys, wherever possible, have also been presented. It may be mentioned that in the earlier quinquennial surveys, a person who could read and write a simple message in any language was considered literate. In the 50th round, another

Table 4.10 : Literacy rate (per 1000 persons) by sex and for rural and urban India				
all-India				
year and round	rural		urban	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
1977-78 (32nd)	415	184	688	500
1983 (38th)	449	219	693	515
1987-88 (43rd)	484	260	719	556
1993-94 (50th)	545	321	759	616

discussion is attempted on employment-unemployment in the subsequent chapters. There is also a need to examine the changes in the literacy rates over time. For that purpose, relevant estimates

condition "with understanding" was added for identifying literates. In Table 4.10, literacy rates (no. of literates per 1000 persons) by sex are given for rural and urban India. The distribution of persons

by education level is presented in Table 4.10.1 for each sex and rural-urban residence at the all-India level, and that for different states and union territories in Table 4.10.1.1. Over the period 1977 to 1994, it is seen that the literacy rate has increased considerably. The increase is relatively more among females than males both in rural and urban India. Further, as seen from Table 4.10.1, the proportion of educated persons (i.e. educational level

secondary and above) has increased in all the categories during the period of 6 years upto 1994. In rural India, the proportions of educated persons in 1993-94 were 10 and 3 per cent, respectively among males and females. The corresponding proportions for urban India were 28 and 19 per cent. The proportion of 'non-literate' and 'educated' varied from state to state, as is seen from the results presented in Table 4.10.1.1.

Table 4.10.1 : Per 1000 distribution of persons by general educational level				
all-India				
year and round	educational level			
	not literate	literate & upto primary	middle	secondary & above
(1)	(2)	(3)	(4)	(5)
<u>rural male</u>

## Chapter Five

### Labour Force

**5.0** Labour force, or in others words, the 'economically active' population refers to the population which supplies or seeks to supply labour for production and therefore, includes both 'employed' and 'unemployed'. For measuring the labour force participation, all the three measures adopted for classification of the population viz. usual status, current weekly status and current daily status are used here. The current daily status will give only the labour force person-days. Further, the labour force measured in terms of usual status will include persons who had for a relatively longer part of the year either worked or were looking for work and also these who had worked at least for some time from among the rest. Thus, on the basis of usual status, two estimates can be obtained - one based on

considering both the principal as well as the subsidiary statuses.

**5.1 Labour force participation rates (LFPR) :** The labour force participation rates (LFPR) is defined as the number of persons in the labour force per 1000 persons. In Table 5.1, the LFPRs, based on different concepts are given for all-India. The corresponding rates obtained from the 43rd round (1987-88) survey are also given in this table for comparison. During the period of six years upto 1994, the usual status LFPRs have increased by about 1 per cent point for males and remained stable for females, in both the sectors. In 1993-94, about 56 per cent of the rural males and 33 per cent of the rural females were 'usually' available for employment. The corresponding urban

all	549	561	331	330	534	543	162	165

tuses, the usual status LFPRs were higher in both the sectors and much higher for rural females. This indicates that some of the usually employed withdraw from labour force when there is no work during some part of the year rather than report themselves as unemployed in the current status. It is more evident for females in the rural areas where the seasonality in work is known to be substantial. The LFPR based on alternative concepts for different states and union territories are given in Tables 5.1.1 and 5.1.2.

## 5.2 Age specific labour force participation rates (ASLFPR) : In

Table 5.2, the LFPR for different age-groups obtained from the 50th and the 43rd round surveys are provided. The rates given here are based on usual status approach, that is, taking into account both the principal and subsidiary statuses. It is seen that during 1987 to 1994, the LFPR has declined in the younger age-groups in all the categories, probably due to an increase in the school enrolment over these years. In the rural areas, both for males and females, the LFPR shows a rising trend for the older age-groups while it has declined in the urban areas.

## Chapter Six

### Employed (Work - force)

**6.0** The NSSO generates three different estimates of 'employed' (or work-force) from the data collected through its quinquennial employment-unemployment surveys. They are :

i) number of persons usually employed (i.e., those who had worked for a relatively longer period during the reference period of 365 days preceding the date of survey);

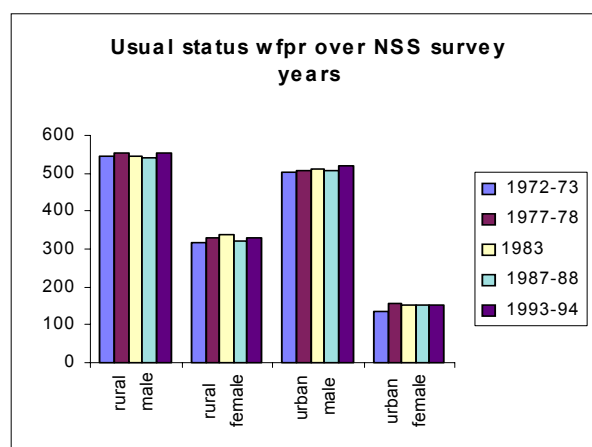

ii) average number of persons employed in a week (i.e., those who had worked at any time during the reference period of 7 days preceding the date of survey) and

iii) average number of person-days of work or employment in total person-days during the reference period of 7 days preceding the date of survey.

Number of persons/person-days employed per thousand persons/person-days is referred to as **work-force participation rates (WFPR)** or **worker-population ratio (WPR)**.

**6.1 Usually employed :** Of the three estimates mentioned above, the first one gives the magnitude of the usually 'employed' or the 'usual status work-force'. It is provided in two categories - 'usually employed' or 'working' in the principal status (ps workers) and 'usually employed' or 'working' only in a subsidiary status (ss workers). The two categories together constitute the total

usually employed (or all workers). The first category pertains to those with more or less stable employment. The relevant estimates for all-India based on all the five quinquennial surveys are presented in Table 6.1. It is to be noted that due to certain procedural differences, the 27th round results pertaining to usual status are comparable only in respect of all workers. In the case of rural males, it is observed that the proportion of employed remained almost constant at 55 per cent during the last one decade (1983-1993). In the case of rural females, it declined from 34 per cent to 33 per cent during the same period. In the case of urban males, the proportion of employed increased by one percentage point from 51 per cent to 52 per cent and it is found to be almost stable at 15 per cent over the decade in case of urban females.

p.s.= principal status : s.s. = subsidiary status

**6.1.1** To study the regional disparities in the usual status WPR, the 50th round results on usual status worker participation ratio in terms of 'principal status' and also 'principal as well as the subsidiary status taken together' are presented in Table 6.1.1 separately for males, females and persons by rural-urban residence. During 1993-94, among the major states, the percentage of usual status workers (principal and subsidiary) among rural males was highest in Andhra Pradesh (63 per cent) followed by Karnataka and Tamil Nadu (60 per cent each). The states with WPRs above the national average of 55 for rural males were Gujarat, Madhya Pradesh and the Orissa (57 per cent each) and West Bengal (56 per cent). The male WPR was

lowest in Haryana (46 per cent), Bihar (51 per cent) and Assam, Jammu & Kashmir and Uttar Pradesh (52 per cent each). In the case of rural females, Andhra Pradesh and Himachal Pradesh topped the list with a WPR of 52 per cent each followed by Maharashtra and Tamil Nadu (48 per cent each), Rajasthan (46 per cent) and Karnataka (43 per cent). Assam had the lowest proportion of 16 per cent. The percentage of female subsidiary status workers was relatively very high in Jammu & Kashmir (about 30 per cent) and Haryana (22 per cent). As observed in the 38th and 43rd rounds, during early nineties also, the major states having a low percentage of usually employed (principal status) rural females had a high percentage of employed in terms of the

subsidiary status. In the urban sector, the male WPR was above the national average of 52 per cent in the major states of Tamil Nadu, Kerala, Punjab, Andhra Pradesh, Karnataka, Gujarat and Assam. On the other hand, for urban females Tamil Nadu had the highest (23 per cent) of usually employed followed by Kerala, Himachal Pradesh and Andhra Pradesh (20 per cent each). The proportion of subsidiary status workers among urban

Rajasthan and Kerala compared to other states.

**6.2 Age specific usual status worker population ratio :** The number of persons usually employed in a particular age-group per 1000 persons in that age-group is defined as the age specific worker population ratio (WPR). Based on the age returns, the age specific WPRs can be estimated from the 50th round data

N.B. : Figures in parentheses give the corresponding WPRs for 1987-88, NSS 43rd round.

females was relatively higher in the major states of Haryana, Himachal Pradesh,

for age groups of five year interval upto the age of 60 years for both the principal status (PS) workers and all workers. The

relevant results for all-India are presented in Table 6.2 and for states and union-territories in Tables 6.2.1 and 6.2.2. Comparable all-India results based on the 43rd round survey are also presented in Table 6.2. It is observed that there had been a fall in WPR during 1993-94 in the age groups 5-9 and 10-14 compared to 1987-88 indicating reduction in 'child labour' during early nineties compared to the late eighties.

**6.3 Age composition of the usually employed :** Table 6.3 gives per 1000 distribution of the usually employed persons by age-group for all-India for both the principal status (PS) workers and all workers. During 1993-94, 'child workers' (aged 5-14 years) constituted about 3 per cent of the rural male workers, 5 per cent of the rural female workers, 2 per cent of the urban male workers and 4 per cent of the urban

female workers. It is worth mentioning that compared to late eighties, the share of

'child labour' in the total work force is reduced during early nineties both in rural and urban India.

#### 6.4 Education level specific usual status worker population ratio for persons of age 15 years and above :

The number of persons of age 15 years and above usually employed in a particular education category per 1000 persons in that education category is defined as the education level specific worker population ratio (WPR). For working out the education specific WPRs, the persons of age 15 years and above are classified into 6 categories viz., 'not literate', 'literate and upto primary', 'middle', secondary', 'higher secondary' and 'graduate and above'. The relevant WPRs for rural and urban India for both the principal status (PS) workers and all

workers are shown in Table 6.4. The corresponding results for states and union-territories are presented in Tables 6.4.1 and 6.4.2. It is interesting to note that at all-India level, for rural males with educational qualification 'graduate and above', the employment level was almost stable at 83 per cent both in late eighties and early nineties; but there has been a considerable improvement of 6 percentage points in the employment opportunities for rural females during the recent period compared to the earlier period. On the other hand for urban males, there had been only a marginal improvement in the employment opportunities during early nineties compared to the late eighties and surprisingly, there had been a fall of 2 percentage points in the employment opportunities for urban females during the

N.B. : Figures in parentheses are the corresponding WPRs for 1987-88, NSS 43rd round.

\* includes higher secondary also in the 43rd round (1987-88).

same period.

**6.5 Education composition of the usually employed (15+)** : Per 1000 distribution of the usually employed persons of age 15 years and above by education category for all-India for both the principal status (PS) workers and all workers is presented in Table 6.5. The corresponding distribution for 1987-88 obtained from NSS 43rd round survey results is also given in the table. During 1993-94, among the employed rural males about 44 per cent were not literate and the educated (secondary and above) constituted only 13 per cent. On the other hand, among the employed rural females about 79 per cent were not literate and the

one-half of the employed females were not literate. Unlike in rural India, in urban India the educated category (secondary and above) constituted nearly about 40 per cent of the employed males and about 23 per cent of the employed females.

**6.6 Distribution of usually employed by status of employment** : Employed persons are categorised into three board groups according to their status of employment. The groups are : (i) self-employed, (ii) regular employees and (iii) casual labour. Table 6.6 shows per 1000 distribution of usually employed by the three statuses of employment for all-India for both principal status (PS) workers and

* includes higher secondary also in the 43rd round (1987-88).								

proportion of the educated was only about 3 per cent. In urban India, only 18 per cent of the employed males and almost

all workers. The table also gives the results on the corresponding distribution obtained from the earlier quinquennial

surveys. During early nineties, in rural India, nearly 60 per cent of the usually employed (all workers) were self-employed among both males and females. The corresponding proportions for urban India were 42 per cent for males and 46 per cent for females. Proportion of regular employees was relatively very much lower among females compared to males in both rural and urban India. On the other hand, proportion of 'casual labour' was more among female workers compared to male workers. In the case of both rural males and females, the proportion of 'self-employed' had gradually fallen from 65 per cent in 1972-73 to 58 per cent in 1993-94 with corresponding increase in the proportion of 'casual labour'. During the decade (1983-93), though the proportion of regular employees among urban males had fallen by about 2 percentage points, among urban females there had been an increase in the proportion of regular employees by 2 percentage points. The distributions of the usually employed by employment status during 1993-94 (50th round) for different states and union territories are presented in Table 6.6.1.

**6.7 Industrial distribution of the usually employed :** As in the earlier quinquennial surveys for the 50th round survey also, information relating to the sector (industry) of employment in which a person was working has been collected for the persons categorised as employed. In the case of 'usually employed', this information was collected for both the principal as well as subsidiary status workers. Table 6.7 shows the distribution of 'usually employed' by industry separately for usual 'principal status' (PS) workers and 'all' workers. Comparable results based on the earlier quinquennial surveys are also presented in the table.

During 1993-94, in rural India, among 'all' usually employed, almost three-quarters of the males and 86 per cent of the females were engaged in the agricultural sector. The proportion of males engaged in the agricultural activities gradually fell from 83 per cent in 1972-73 to 74 per cent in 1987-88 and then remained almost stable at that level. On the other hand, in the case of female workers, the proportion engaged in the agricultural activities decreased from 90 per cent in 1972-73 to 85 per cent in 1987-88 and then showed a slight increase of one percentage point in 1993-94. Over the years in rural India, there had been a gradual increase in the proportion of persons engaged in both 'trade' and 'services'. In urban India for males, 'manufacturing' and 'services' sectors accounted for a quarter each of the total usually employed during 1993-94. Trade sector engaged about 22 per cent of the total male workers. Next to these three sectors, both 'agriculture' and 'transport' provided employment to about 10 per cent each of urban male workers. On the other hand, for urban females, 'services' sector accounted for the highest proportion (35 per cent) of total usually employed followed by 'agriculture' (25 per cent) and 'manufacturing' (24 per cent). Proportion of urban females employed in agricultural sector had fallen by about 7 percentage points since 1977-78, with a compensating rise in 'construction', 'trade' and 'services' sectors. Trade sector accounted for about 10 per cent of the employed urban females over the years. Per 1000 distributions of usually employed in the 'principal status' and in the 'principal as well as subsidiary status' by industry for each state and union territory are presented in Tables 6.7.1 and 6.7.2 respectively.

**6.8 Estimates of employed according to current status :** The 'usual status' approach adopted for classification of the population, obviously, does not take into consideration the changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly and current daily status approaches are expected to reflect the overall effect caused by the intermittent changes in the activity pattern during the year. The latter reflects also the changes which take place even during

quinquennial surveys. It is observed that though the difference between the two rates had steadily reduced from 1977 to 1987 in both the sectors for males and females, the underemployment among those who had some employment in the week had considerably increased between late eighties and early nineties for all persons except urban males. Interesting to note is that between the period 1987-88 to 1993-94, the worker population ratios based on current statuses have increased, particularly in CWS and for rural women.

**Table 6.8 : Number of persons employed per 1000 persons according to current weekly and daily status by sex and residence status**

a week. The estimates of the employed based on current weekly status give the average weekly picture and those based on current daily status give the average daily picture of employment. The difference between the two rates indicates the underemployment of those who had some employment in the week. Table 6.8 gives the relevant estimates of employed according to current weekly and current daily status for all-India based on the five

This increase in the current status rates may partly be due to the procedural change adopted in the collection of data relating to current activity status for this round. The proportions of persons employed according to current weekly and current daily status per 1000 persons by sex and residence for each state and union territory are presented in Table 6.8.1.

## Chapter Seven

### Unemployed

**7.0** As in the case of 'employed', for unemployed also three kinds of estimates are obtained following the three different approaches. These are :

- i) number of persons usually unemployed based on 'usual status' approach,
- ii) number of persons unemployed on an average in a week based on the 'weekly status' approach and
- iii) number of person-days unemployed on an average during the reference period of seven days preceding the survey.

The first estimate indicates the magnitude of persons unemployed for a relatively longer period during a reference period of 365 days and approximates to an indicator of the chronically unemployment. Some of the unemployed on the basis of this criterion, might be working in a subsidiary capacity. One can, therefore, get another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period. The former is called as the usually unemployed according to the principal status (p.s) and the latter, the usually unemployed excluding the subsidiary status workers (u.s adjusted) which admittedly will be lower than the former. The second estimate based on the weekly status gives the average weekly picture during the survey year and includes both chronic unemployment and also the intermittent unemployment of those categorised as usually employed caused by seasonal fluctuations in the labour market. The third estimate based on the daily status concept gives average level of

unemployment on a day during the survey year. It is the most inclusive rate of 'unemployment' capturing the unemployed days of the chronically unemployed, the unemployed days of the usually employed who become intermittently unemployed during the reference week, and the unemployed days of those classified as employed according to the priority criterion of current weekly status. Since the unemployment rates rather than the proportion of the unemployed (i.e. number of unemployed persons per 1000 persons) depict the picture of unemployment in a better manner, unemployment rates are discussed below. **Unemployment rate** is defined as the number of persons unemployed per 1000 persons in the labour force. This in effect gives the unutilised segment of the labour force.

**7.1 Unemployment rate :** The unemployment rates obtained under various approaches adopted for its measurement are provided in Table 7.1 for all-India. The proportion of the unemployed is given in parentheses along with the rates. Although the unemployment rates, during 1993-94, were not very high, the rates were higher in the urban areas as compared to those in the rural areas of India. While the gender difference in the unemployment rate was almost absent in the rural areas, it was significant in urban areas and the rates were highest among urban females according to all the approaches. The unemployed person-day rates were higher than the rates obtained for persons - indicating a high degree of intermittent unemployment. This is mainly due to the absence of regular employment.

1972-73 (27)	-	48	60	80	-	60	92	137

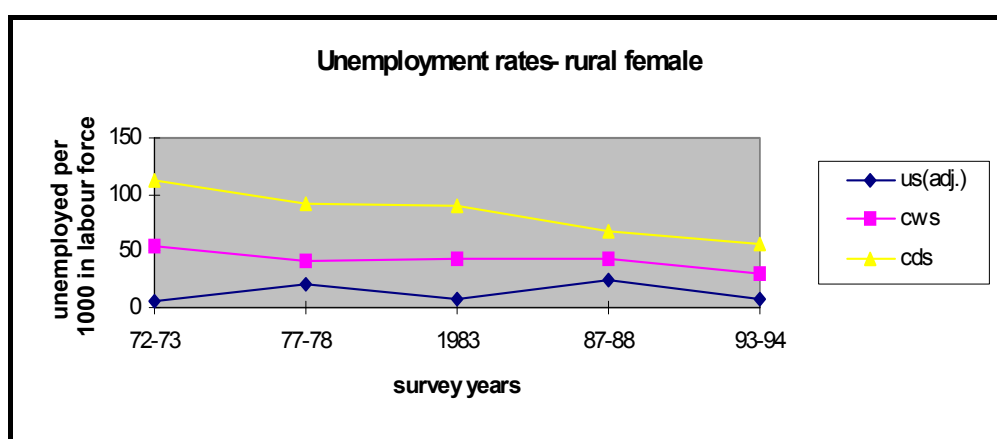

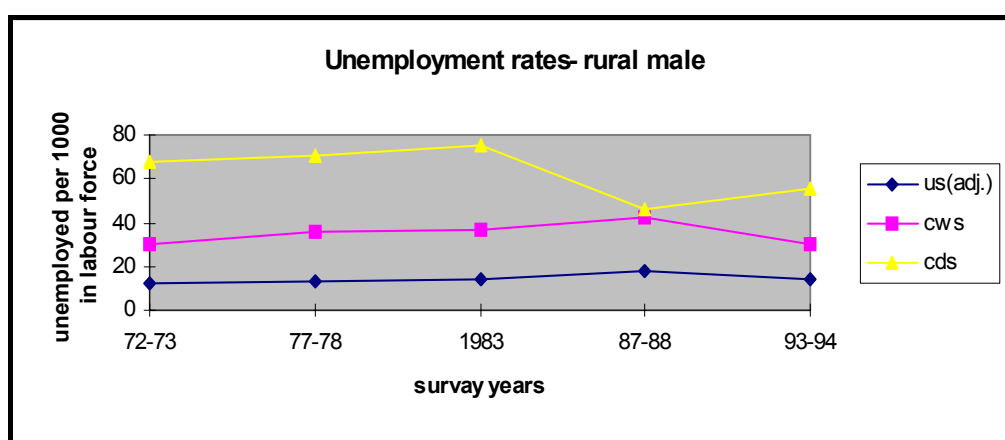

NSS are given in Table 7.2. It may be available. For all the statuses, no definite

trend is observed in the unemployment rates over the periods 1972 to 1994. The fluctuations were more for females. However, the rates were substantially lower in 1993-94 compared those in 1987-88 except in the case of cds rate for rural males for which there was a slight increase. The effect of seasonality within a survey period is prominent from cws and cds estimates as these are intended to capture this component of the unemployment.

**7.3** In the next four tables (bearing nos. 7.3.1 to 7.3.3) are presented the

1993-94: the rates were 9 and 12 per cent in its rural and urban areas respectively - the corresponding all-India rates being 2 per cent and 5 per cent. In this state, the rates among males and females were about 7 and 16 per cent in the rural, and 8 and 24 per cent respectively, in the urban areas. The states following Kerala were Assam (7 per cent) and West Bengal in both the sectors - the rates being almost the same in these states for rural males but were higher in Assam for rural females. Rajasthan had the lowest unemployment rate among the major states, about 4 to 18 persons being

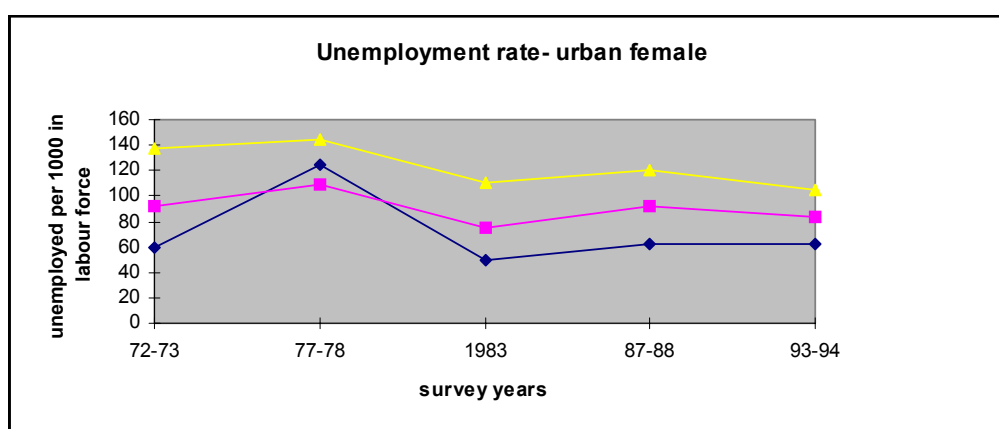

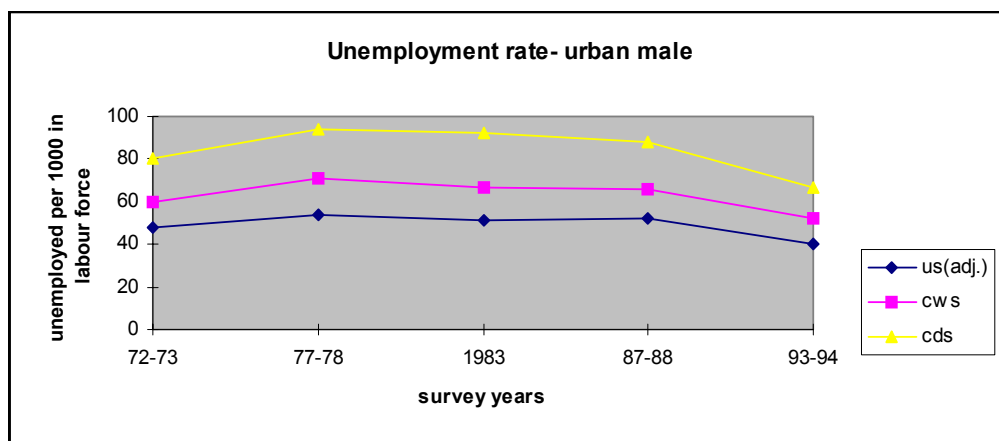

unemployment rates based on u.s., u.s(adj.), cws and cds statuses for rural and urban areas of different states and union territories. The chronic unemployment rate (u.s.), among the major states, was highest in Kerala during

chronically unemployed for every 1000 persons in the labour force. Lakshadweep had recorded a very high chronic unemployment rate (about 18 to 21 per cent), among the minor states and union territories.

**7.3.1** The unemployment rates are found to be higher in the current statuses than those in the usual statuses and highest in the current daily status. In the current statuses, the unemployment rate was also

various approaches are given for different educational attainments and sex at the all-India level. Some interesting facts are revealed from this table. The incidence of unemployment among the educated was higher than that among the less educated

highest in Kerala and lowest in Rajasthan among the major states.

**7.4 Unemployment rates of the educated :** As mentioned earlier, the educated for the purpose of the report are persons who have obtained an educational level of secondary and above. Normally, one can attain this educational level at the age of 15 years or above. Thus the study among the educated is restricted to persons of age 15 years and above. In Table 7.4, the unemployment rates based on

and was also much higher in the rural sector than in the urban sector. Secondly, the rate is much higher among females than among males. Among the graduates, this disparity is even more glaring. Perhaps the reduced mobility and other social factors which restricts the labour market options for females explain high unemployment rate among the educated females. The educated category are generally available for white-

Note: Figures in parentheses give the corresponding rates available for NSS 43rd round.							

collar jobs and the gender bias alleged to be present in the access to these jobs is an important issue. These rates among the educated, however, seem to have declined substantially between 1987-88 and 1993-94, with a faster decline in the rural areas and especially among the females. This indicates that the economic pressures might have

compelled them to overcome the restrictions in mobility and social stigma. Corresponding results for different states and union territories are given in Table 7.4.1 to 7.4.3. It may be noted that the estimates given for the smaller states and union territories may not be reliable enough due to small sample size. So far as the proportion of educated among the unemployed is concerned, there is no consistent pattern observed in the rural and urban areas of the states. However

this proportion for urban females is found to be the highest among all the categories in most of the major states. The unemployment rates among the educated are found to follow the all-India pattern - the rates are higher for the rural areas and also much higher for the females - barring

and union territories reporting high unemployment rates for the educated also had high unemployment rates for the educated females.

<b>The figures in the parentheses give the corresponding rates for NSS 43rd round (July 1987-June 1988).</b>								

a few states and union territories. Among the major states, Assam was at the top position in the rural areas where about 33 per cent of the educated available for employment according to usual principal status remained unutilised. Assam was followed by Kerala (27 per cent). In the urban areas, these two states interchanged their relative positions-the rates being about 21 per cent in Kerala and about 18 per cent in Assam. The unemployment rates for educated females were also quite high in these states. In general, the states

In India, persons aged 15-29 years, considered as the youth, account for 26 to 29 per cent of the total population. Normally, most of them attain the desired level of education and enter into the labour market while they are in the age of 15-29 years. In a labour surplus economy like that of India, many of them remain unemployed and continue to search or to be available for employment. Some may be chronically unemployed - remaining

unemployed for a longer period of the year. Some others, though usually employed, become intermittently unemployed during some weeks or days of the year due to seasonal fluctuations in the labour market. Table 7.5 gives the unemployment rates (per 1000) among the youth for each sex at the all-India level. It is seen that the incidence of unemployment was much higher among the youth compared to that in the overall population (given in table 7.1). Secondly, the incidence was higher among the urban

youth than that for the rural youth. Further, compared to the female youth, the unemployment rate among the male youth was higher in rural India but was lower in urban India. Between the period 1987-88 and 1993-94, the unemployment rates among the youth have declined especially for males for all the statuses excepting for cds in rural areas. The corresponding rates for different states and union territories are given in tables 7.5.1 to 7.5.4. It may be noted that the rates given for smaller states and union territories may not be reliable due to small sample size for the unemployed in those states and union territories. In the major states, all-India features were generally observed. The youth unemployment rate was highest in Kerala and was lowest in Rajasthan.

## Chapter Eight

### Underemployment

**8.0** Underemployment is commonly defined as the underutilisation of labour time of the workers. Some of the persons categorised as usually employed, do not have work throughout the year due to seasonality in work or otherwise and their labour time is not fully utilised - they are, therefore, underemployed.. Their underemployment is termed visible underemployment if they report themselves to be available for additional work. The NSS measures the visible underemployment by cross classifying persons by their usual and current statuses, and the current weekly vs. current daily statuses.

**8.1** Some employed persons, particularly the self-employed, may appear to work throughout the year. But in terms of productivity or income, the work they are pursuing may not be sufficient for them. They may, therefore, want additional and/or alternative work in order to supplement their income. Such underemployment is termed as invisible underemployment and therefore, not directly measurable. The NSS works out the indicators of invisible underemployment through a set of probing questions addressed to those categorised as usually employed on their availability for additional/alternate work and reason for seeking additional/alternate work, status of their present engagement (i.e. whether worked more or less regularly), etc. The proportion of the usually employed who indicate their availability for additional/alternate work, gives by and large an overall share of the employed who did not have enough work or at least felt the need for additional/alternate work and in that sense, were underemployed.

**8.2 Underemployment among the usually employed :** As mentioned earlier, some persons categorised as usually employed might not have work throughout the year. They might remain without work during some weeks of the year or go without work on some days of the different weeks of the year. The first dimension is brought out by the distribution of the usually employed by their current weekly status. Table 8.2 gives the relevant all-India results for 'all' usually employed persons (i.e., usually employed in both the principal and subsidiary status) for 1993-94. Corresponding results based on the NSS 38th and 43rd rounds are also presented in the table. It is seen that the proportion of usually employed who were found to be not employed during the week preceding the date of survey, say the underemployment rate, declined gradually during the period 1983 to 1993-94 and with a faster rate between the period 1987-88 and 1993-94 in general and for females in particular. Secondly, this problem of underemployment is seen to be more serious among usually employed females than among employed males and more in rural than in urban areas. During 1993-94, the underemployment among usually employed females was 19 per cent in rural India and 12 per cent in urban India. The corresponding percentages for usually employed males were 4 and 2 only. Most of the usually employed females who were currently not working, had withdrawn from labour force and did not report themselves as currently unemployed. The corresponding distribution for the states and union-territories is presented in table 8.2.1

males respectively. Once again, it is observed that when work is not available, a large proportion of females withdraw from labour force rather than report themselves as unemployed. The relevant results for different states and union territories are presented in Table 8.3.1.

**8.4 Underemployment of persons categorised as working according to current weekly status :** As mentioned earlier, some persons classified as working during a week might not have had work for the entire week. The distribution of persons working according to current weekly status by their daily status, therefore, would indicate the proportion of person-days on

which they had remained without work. These results are presented in Table 8.4 for 1993-94 (50th round), 1987-88 (43rd round) and 1983 (38th round). In 1993-94 the percentage of person-days on which persons with some work during the reference week (according to weekly status) were without work, was about 5.0 for rural males, 17.9 for rural females, 2.8 for urban males and 13.9 for urban females. Between 1983 and 1993-94, the proportion of unemployed days showed a declining trend in all the categories except for rural males where the proportion declined between the period 1983 and 1987-88 and then rose (to 2.6 per cent) in 1993-94. However, both in rural and urban areas when there is no work, a higher proportion of females as compared to males withdraw from the labour force. The state-specific data on the distribution of person days of persons with some work during a week by their broad daily activity status are presented in Table 8.4.1.

**8.5 Indirect measure of underemployment :** The usually employed were asked 'whether they worked more or less regularly throughout the year'. Among them, those who did not

different states and union territories are given in Table 8.5.1.

**8.6** As mentioned earlier, the usually employed but underutilising their

work more or less regularly can give an idea of the extent of underemployment. Table 8.5 shows the number of usually employed who did not work more or less regularly throughout the year per 1000 employed by usual principal status at the all-India level. It is observed that the incidence of underemployment was higher in rural areas than in urban areas and higher among females than among males. Further, the casual labourers were the worst affected group among the employed e.g. as high as 59 per cent of female casual labourers engaged in public works did not work regularly throughout the year in rural India. On the other hand, as expected, the incidence was lowest among the regular wage/salaried employees, specially those engaged in non-agriculture sector where the incidence of underemployment was 2-3 per cent only. The relevant results for

available labour time due to lack of enough work or persons having enough work but not getting sufficient return, were asked 'whether they sought or were available for (i) additional work and (ii) alternate work'. The proportion of usually employed who reported themselves as available for additional work or alternate work, therefore, serves as an indirect measure of underemployment. Availability for alternate work measures job dissatisfaction.

**8.6.1 Underemployed - seeking or avail-able for additional work:** Table 8.6.1 gives the number of usually employed persons of age 15 years and above reporting themselves as available for additional work per 1000 usually employed persons of age 15 years and above and their distribution by reason for seeking or availability for additional

**Table 8.6.1 : Number of usually working (principal) persons (15 years & above ) who sought or were available for additional work per 1000 usually working (principal) persons (15 years & above) and their per 1000 distribution by reason for seeking or availability for additional work for each sex**

female	51	529	157	157	157	1000

Ref. : Table 79

work. About 7 per cent of usually employed rural males and 4 per cent of usually employed urban males had reported availability for additional work. The corresponding percentages were 6 for rural females and 5 for urban females. The main reported reason for availability for additional work was to supplement income, it was reported by about half of them. 'Lack of enough work' was reported by 16 to 19 per cent of underemployed'. Taking into account responses to both the factors, a need to 'supplement income' or 'lack

enough work' for about 82 to 88 per cent of 'underemployed', had led to their availability for additional work. The proportion of 'underemployed' for different states and union territories is given in Table 8.6.1.1.

**8.6.2 Underemployed - seeking or available for alternate work:** Table 8.6.2 shows the usually employed persons of age 15 years and above reporting themselves as available for alternate work. About 4 to 6 per cent of the usually employed had reported availability for alternate work during 1993-94. Among the usually employed reporting themselves available for alternate work, 50 to 63 percent had reported that their 'present work was not remunerative enough'. Table 8.6.2.1 gives the corresponding results for the different states and union territories.

**Table 8.6.2 : Number of usually working (principal) persons (15 yrs. & above) who sought or were available for alternative work per 1000 usually working (principal) persons (15 yrs. & above) and their per 1000 distribution by reason for seeking or availability for alternate work for each sex**

## Chapter Nine

### Occupational Mobility

**9.0** To study the occupational or job mobility, NSS has, for the first time, collected information relating to 'change in the nature of work' and 'change of establishment' for the usually employed persons (according to principal status). For that purpose, the changes that took place within a reference period of two years prior to the date of survey, were considered. The term 'nature of work' related to type of work performed by the person or the occupation pursued by him/her. The term 'establishment' was used in a broad sense and included all producing units covering household enterprises also. The data have been tabulated for the usually employed of age 15 years and above. The data have been classified by usual activity status and educational level.

**9.1** Table 9.1 shows that 4 to 5 per cent of the usually employed had changed the nature of work and/or establishment during the two years preceding the interview. The rate of change was roughly the same for males and females but higher for the 'non-educated' persons. Secondly, the change of work and/or establishment is more frequent among casual labourers than among regular wage/salaried employees and self-employed. Lastly, the rural-urban differentials in change is negligible.

**9.1.1** Table 9.1.1 shows that among the usually employed who changed nature of work and/or establishment, about 90 per

cent had changed the establishment and about 34 to 47 per cent had changed the nature of work. The corresponding proportion at the state and union territory level is given in Table 9.1.1.1.

**9.1.2** In the case of change of nature of work, the last occupation in which a person was engaged was collected. Based on this information, the distribution of the usually employed who changed nature of work by occupation division has been obtained and presented in Table 9.1.2 for India. Among the usually employed in rural areas, who had changed nature of work, 44 to 69 per cent had reported 'farming, fishing, hunting, etc.' as their last occupation. The next important occupation division was 'production and related workers, etc.' (5 to 15 per cent) in the rural areas. In urban areas also, the same two occupation divisions (div. 6-9) accounted for about 43 to 60 per cent of the usually employed who had changed the nature of their work during the two years preceding the survey. On the other hand, the administrators, executives and managerial workers accounted for only a small share of occupational changes. The reason may be that their share in the total employed is also small. In order to study the occupation mobility for each occupation division, incidence of occupation mobility, i.e number of usually working (principal) persons who had changed the nature of job per 1000 usually working (principal) persons, has been obtained and presented in table 9.1.3 for rural and urban India.

**9.1.3** It may be mentioned that to calculate the incidence of occupation mobility, the estimate of usual principal workers of age 15 years and above has been obtained for each occupation division from table 35 of Appendix-I. For the purpose, first, the estimated usual principal workers have been adjusted for the age group 15 years and above. Then, the distribution of workers by occupation division, given in table 35, has been used

workers are only 3.1 per cent of all workers. As can be seen from table 9.1.3 that the incidence of occupation mobility was higher in urban areas than that in rural areas. The incidence was highest among the urban male workers.

**9.1.4** The reason for change of the nature of work and/or establishment was ascertained from the usually employed who changed nature of work and/or establishment. The relevant results based on this information are given in Table 9.1.4. About a half of the employed who

**Table 9.1 :** Number of usually working (principal) persons (15 yrs. & above) who had changed the nature of work and/or establishment during the two years preceding the survey per 1000 usually working (principal) persons (15 yrs. & above) for each usual status activity, educational level and sex

to obtain the estimated usual principal workers under each occupation division - under the assumption that the distribution of child workers (principal) by occupation division, although likely to be different, will not seriously affect the distribution for all principal workers by their exclusion from the estimates, as the child

had changed nature of work and/or establishment did not report any of the specified reasons. Among the specified reasons, 'loss of earlier job' and 'better remuneration' were found to be the main reasons, reported by 39 to 46 per cent of employed males and by 31 to 32 per cent of employed females who had changed nature of work and establishment

Table 9.1.1 : Per 1000 distribution of usually working (principal) persons (15 yrs. & above) who had changed the nature of work and/or establishment during the two years preceding the survey by rural-urban residence and sex

## Appendix

### All-India Detailed Tables

**Note :** The estimates of aggregates given in the detailed tables may be used to combine the ratios only. To arrive at the absolute number in any category, one may apply the survey estimates of ratios of that category on the projected population as on 1.1.1994, the mid-point of the 50th round survey period of July 1993 - June 1994.

#### **Codes used in the Appendix Tables :**

**Tables 19 & 20:** educational standard-general: not literate-01, literate through attending: NFEC/AEC-02, TLC-03, others-04; literate but below primary-05, primary-06, middle-07, secondary-08, higher secondary-09, graduate and above in: agriculture-10, engineering/technology-11, medicine-12, other subjects-13  
educational standard-technical: no technical education-1, additional diploma or certificate in: agriculture-2, engineering/technology-3, medicine-4, crafts-5, others subjects-9

**Table 27:** current attendance in educational institution: currently not attending-01, currently attending: NFEC/AEC-02, TLC-03, pre-primary-04, primary-05, middle-06, secondary and higher secondary-07, degree course: agriculture-08, engineering/technology-09, medicine-10, others subjects-11; diploma or certificate course: agriculture-12, engineering/technology-13, medicine-14, crafts-15, other subjects-19

**Table 28:** skill: typist, stenographer-01, fisherman-02, miner, quarryman-03, spinner including charkha operator-04, weaver-05, tailor,cutter-06, shoe-maker, cobbler-07, carpenter-08, mason, bricklayer-09, moulder-10, machineman-11, fitter, diemaker-12, welder-13, blacksmith-14, goldsmith-15, silversmith-16, electrician-17, repairer of electronic goods-18, motor vehicle driver, tractor driver-19, boatman-20, potter-21, nurse, midwife-22, basket maker, wicker product maker-23, toy maker-24, brick maker, tile maker -25, bidi maker-26, bookbinder-27, barber-28, mud house builder & thatcher-29, others-30, no skill-99.

(b)

**Table 36:** *occupation classification : nursing & other medical & health technicians-08; teachers-15; professional, technical and related workers-0 & 1; administrative, executive and managerial workers-2; clerical and other supervisors, village officials, stenographers, typists and card and tape punching operators, book-keepers, cashiers and related workers, computing machine operators, clerical and related workers n.e.c.-30-35; clerical and related workers-3; merchants and shopkeepers, wholesale and retail trade-40; sales workers-4; housekeepers, matrons and stewards, cooks, waiters, bartenders and related workers, maids and related house keeping service workers, building caretakers, sweepers, cleaners and related workers- 51-54; launderers, dry-cleaners and pressers, hair dressers, barbers, beauticians and related workers- 55-56; service workers-5; cultivators (owners & tenants)- 610 & 611; agricultural labourers-63; plantation labourers and related workers-64; farmers, fishermen, hunters, loggers & related workers-6; miners, quarry-men, well drillers & related workers-71; metal processors-72; spinners, weavers, knitters, dyers & related workers-75; food & beverage processors-77; tailors, dress makers, sewers, upholsterers & related workers-79; shoe makers & leather goods makers, carpenters, cabinet & related wood workers-80 & 81 (other than 82-89); bricklayers & other construction workers-95; stationer engines and related equipment operators oiler & greasers-98; labourers n.e.c.-99; production and related workers, transport equipment operators & labourers- 7-9*

**Table 76:** *reason for change of job: loss of earlier job due to: retrenchment/lay-off-1, closure of unit-2, for better remuneration-3, no job satisfaction-4, lack of job security-5, work place too far-6, promotion/transfer-7, others-9*

**Table 77:** *occupation division: professional, technical and related workers-0-1, administrative, executive and managerial workers-2, clerical and related workers-3, sales workers-4, farmers, fishermen, hunters, loggers and related workers-5, service workers-6, production and related workers, transport equipment operators & labourers-7-9, workers not classified by occupations-X.*

**Table 78:** *whether sought/available for work during those months: yes: on most days-1, on some days-2; no-3*

**Table 79:** *whether sought/available for additional work during the day he/she had work: yes: on most days-1, on some days-2; no-3.*

**Table 80:** *whether sought/available for alternative work during the days he/she had work: yes: on most days-1, on some days-2; no-3.*
