Version

VERSION DESCRIPTION
V 1.0: Re-organised anonymized dataset for public distribution

PRODUCTION DATE
2012-03-08

Overview

ABSTRACT
Through this schedule, it is aimed to collect information relating to availability of some general facilities to the villagers like electricity connection, drinking water, government development programmes, etc. and also some specified facilities relating to education, health and rehabilitation of the disabled persons. Information in this schedule relate to the entire sample village (Panchayat ward in Kerala) even if hamlet-group formation has been resorted to. If a facility is available in general to the villagers, it is considered as a facility. The required information has been obtained by contacting the village officials and / or other knowledgeable person(s). In case they were not aware of the existence of a particular facility, the nearest Block Development Officer or other related Agencies were contacted for collection of the relevant information.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Randomly selected Villages based on sampling procedure

Scope

NOTES
A large section of India's population lives in rural areas. It was thus pertinent to know the quality of life of the people in the villages, which in turn largely depended on the facilities available to the villages.

Also, policy interventions aimed at improving the quality of life in the villages demanded information on the facilities available to the people of rural India.

Information on the availability of various infrastructural facilities in the villages used to be collected by the National Sample Survey, more or less regularly, till the NSS 22nd round. Thereafter such information had been collected only in a few NSS rounds. During the NSS 47th round (July-December 1991), the main subject of which was 'Disability and Culture', a detailed survey on the facilities available to the villages was conducted. Similar information on village facilities was also collected along with the listing operations during the 52nd round (1995-96).

Since then there was not much information collected on the village facilities in India. Therefore, urgent need was felt by the Government to undertake the collection of information on village facilities led to an enquiry on availability of facilities in villages through the 58th round of NSS (July-December 2002).

The enquiry included the collection of of various infrastructural facilities in the village. the main thrust was on availability of some general facilities to the villagers like electricity connection, drinking water, government development programmes,

etc., and also some specified

facilities relating to education, health and rehabilitation of the disabled persons.

TOPICS

Topic	Vocabulary	URI
Education	World Bank	
Health	World Bank	
Infrastructure	World Bank	
Social Development	World Bank	
Energy	World Bank	

KEYWORDS

Availability of electricity, Non-conventional energy:Energy generated through other means was treated as non-conventional energy for the purpose of this survey Energy generated through other means was treated as non-conventional energy for the purpose of this survey Non-conventional energy, bio-gas, solar energy, wind energy, Drainage system, Community TV centre, Cable TV, Cooperative Society, Self-help Group, Distance of location of a facility, Educational Facilities, Pre-Primary School;Primary School;Middle School;Secondary School;Higher Secondary School/Junior College, College with Degree Courses;Industrial Training Institute (ITI):, Non-formal Education Centre (NFEC);, Health Facilities, Sub-centre/ Dispensary;Primary Health Centre;Community Health Centre/ Government Hospital, Private Hospital;Private Clinic/ Doctor;Medicine Shop, Other Facilities, Integrated Child Development Service Centre (Anganwadi/ Balwadi):, Telegraph Office/ PCO/ E-mail, Bank, Veterinary Hospital/Dispensary, Fertilizer/ Pesticide Shop, Fair Price Shop, Facilities for Disabled Persons, Integrated Educational Centre, Special School for the Blind, Special School for the Deaf and Dumb, Special School for the Mentally Retarded:, Vocational Training Centre, Institution / Organization for the Rehabilitation of Disabled Persons, Mobile Rehabilitation Services

Coverage

GEOGRAPHIC COVERAGE

Geographical coverage: The survey covered the whole of the Indian Union except (i) Leh and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

UNIVERSE

The survey used the interview method of data collection from a sample of randomly selected villages.

Sampling

Sampling Procedure

Broad sample design (rural): A stratified multi-stage design was adopted for the survey of the NSS 58th round. The first stage units were 1991 Census villages (Panchayat wards for Kerala) in general and 1981 Census villages for Jammu & Kashmir. Normally, the rural areas of each district formed a stratum. Wherever the rural population of a district exceeded a certain limit, the district was divided into a number of strata. The sample villages were selected with probability proportional to population (except for special strata consisting of small villages where simple random sampling was done), in the form of two independent sub-samples from each stratum. In all, 4646 sample villages were surveyed at the all-India level in this round.

Outline of Sample Design: A stratified multi-stage design was adopted for the conduct of the NSS 58th round. The first-stage units were census villages (panchayat wards for Kerala) in the rural sector.

Sampling Frame for First-Stage Units: For the rural sector, the list of Census 1991 villages (panchayat wards for Kerala) constituted the sampling frame, except in the case of J & K where Census 1981 villages formed the frame.

Stratification :
Rural sector: Two special strata were formed at the State/ UT level on the basis of the population census of 1991, viz.
Stratum 1: all FSUs with population between 0 and 50, and
Stratum 2: FSUs with population more than 15,000
Special stratum 1 was formed if at least 50 such FSUs were found in a State/UT.
Similarly, special stratum 2 was formed if at least 4 such FSUs were found in a
State/UT. Otherwise, such FSUs were merged with the general strata.
From the remaining FSUs (not covered under strata 1 & 2) general strata (hereafter, stratum will refer to general stratum unless otherwise mentioned) were formed and numbered 3, 4, 5, etc. (even if no special strata had been formed). Each district of a State/UT was normally treated as a separate stratum. However, if the provisional population of the district was greater than or equal to 2.5 million as per Census 2001, the district was divided into two or more strata with more or less equal populations as per Census 1991 by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly contained in an NSS region. In such cases, the part of the district falling in an NSS region constituted a separate stratum.

Total sample size (FSUs): A total of 4834 FSUs were selected for survey as the Central sample for the rural sector.

Allocation of rural sample to strata/ sub-strata: In the rural sector the sample size allotted to a State/UT were allocated to different strata in proportion to populations of the strata. All the stratum- level allocations were adjusted to multiples of 2.

Selection of FSUs: FSUs were selected in the form of two independent subsamples.
For special stratum 2 and all the general strata of the rural sector, FSUs were selected by probability proportional to size with replacement (PPSWR) where size was the 1991 Census population.

Deviations from Sample Design

There was no deviation from the original sampling design

Response Rate

Number of units (villages) to be surveyed : 4786
Number of units responded : 4646
Response rate (%) : 97.07

Weighting

Multiplier has been computed for sub-sample and combined.
WGT is the weight which should be applied for estimation.

Questionnaires

Overview

Schedule 3.1 consists of the following 7 blocks:

Block 0: descriptive identification of sample village
Block 1: identification of sample village
Block 2: particulars of field operation
Block 3: availability of some facilities
Block 4: distance from nearest facility
Block 5: remarks by investigator
Block 6: comments by supervisory officer(s)

Blocks 3 and 4 are the main blocks of this schedule. Block 3 is meant for recording the information relating to availability of some facilities to the villagers. Block 4 is for recording the information relating to distance of specified facilities from the centre of the sample village.
Blocks 0 & 1 are meant for recording the identification particulars of the sample village. Block 2, 5 and 6 are used for recording the particulars relating to field operations, Remarks of the investigators and those of the supervisory officer(s) respectively.

Data Collection

Data Collection Dates

Start	**End**	**Cycle**
2002-07-01	2002-12-31	N/A

Time Periods

Start	**End**	**Cycle**
2002-07-01		2 sub-rounds of 3 months each

Data Collection Mode

Face-to-face [f2f]

Data Collection Notes

The information on the facilities available to the villagers was collected from one or more knowledgeable persons of the village. In case there were
more than one source, then the informant from whom the maximum information was collected was considered. It is observed that 79% of the
informants were Sarpanches or other Panchayat Members or Gram Sevaks/other village officials.

Questionnaires

Schedule 3.1 consists of the following 7 blocks:

Block 0: descriptive identification of sample village
Block 1: identification of sample village
Block 2: particulars of field operation
Block 3: availability of some facilities
Block 4: distance from nearest facility
Block 5: remarks by investigator
Block 6: comments by supervisory officer(s)

Blocks 3 and 4 are the main blocks of this schedule. Block 3 is meant for recording the information relating to availability of some facilities to the villagers. Block 4 is for recording the information relating to distance of specified facilities from the centre of the sample village.
Blocks 0 & 1 are meant for recording the identification particulars of the sample village. Block 2, 5 and 6 are used for recording the particulars relating to field operations, Remarks of the investigators and those of the supervisory officer(s) respectively.

Data Collectors

Supervision

Field Office Division of NSSO, Ministry of Statistics and PI

Data Processing

Data Editing

Data was collected as per the Questionnaire 3.1. But for processing purposes, a flat file was created using the identification particulars from Block 1 and Village facility information from Block 3 and Block 4. Data editing, scrutiny and validation were carried out as per the scrutiny checks and corrected manually.

Data Appraisal

Other forms of Data Appraisal

Comparison of availability of educational facilities between NSS 47th round and 58th rounds of NSS.
Comparison in respect of availability of facilities for the disabled between the 47th and 58th rounds of the NSS.
Few results showed :
- Pre-primary school facilities were available in 66% of India's villages in 2002 compared to only 39% in 1991.
· 72% of the villages had primary school facilities in 2002 compared to 67% in 1991.
- Facilities for the disabled such as schools for the blind, the deaf and dumb, and the mentally retarded were extremely rare, the situation in this respect being no better than it was 11 years ago.

File Description

Variable List

Village_facility

Content	The file contains data for village facility surveyed through NSS 58th Round Schedule 3.1. Main Block 3 and Block 4 containing information on village fascility have been merged along with identificati from Block 1 to make a single record for village facility. In this file WGT, the weight has been computed which should be used for estimate.

Overview	
Type: Continuous	Valid cases: 4646
Format: numeric	Invalid: 0
Width: 2	Minimum: 1
Decimals: 0	Maximum: 89

Description

In Rural sector: Two special strata were formed at the State/ UT level on the basis of the population census of 1991, viz.
Stratum 1: all FSUs with population between 0 and 50, and Stratum 2: FSUs with population more than 15,000
Special stratum 1 was formed if at least 50 such FSUs were found in a State/UT.
Similarly, special stratum 2 was formed if at least 4 such FSUs were found in a State/UT. Otherwise, such FSUs were merged with the general strata.
From the remaining FSUs (not covered under strata 1 & 2) general strata (hereafter, stratum will refer to general stratum unless otherwise mentioned) were formed and numbered 3, 4, 5, etc. (even if no special strata had been formed). Each district of a State/UT was normally treated as a separate stratum. However, if the provisional population of the district was greater than or equal to 2.5 million as per Census 2001, the district was divided into two or more strata with more or less equal populations as per Census 1991 by grouping contiguous tehsils. However, in Gujarat, some districts
were not wholly contained in an NSS region. In such cases, the part of the district falling in an NSS region constituted a separate stratum.

Interviewer instructions

To be recorded in minutes

Electricity connection (Bl3_q1)
File: Village_facility

Overview	
Type: Discrete	Valid cases: 4646
Format: character	Invalid: 0
Width: 1	

Description

Where electricity was available in the village for all purposes, the village was categorised as having electricity for any combination of purposes, even if the economic condition of the villagers was so poor that not a single household had actually obtained a connection in order to use electricity for any purpose. But a village in which power supply had ceased to exist in spite of electricity poles, wirings, etc., being available for the last ten years or so was treated as not having the facility. Thus, to categorise the village as having electricity available for any purpose, only the existing and functional facility was considered.

Villages where electricity could be used only by hooking electricity from the main electric line outside the village were not categorised as having electricity.
Street lighting was considered to be available in a village even if street lights were found only on the boundary of the village or in some particular important positions of the village.

Pre question

Availability of electricity connection
(yes or no)
If yes what type of electricity

Literal question

What type of electricity connection in the village

Interviewer instructions

(yes for: street lights only, household use only, agricultural purpose only, industrial purpose only, combination of electricity, no - 6)

Non-conventional energy (Bl3_q2)
File: Village_facility

Overview	
Type: Discrete	Valid cases: 4644
Format: character	Invalid: 0
Width: 1	

Description

Non-conventional energy: Conventional energy includes energy generated using petroleum or coal and also atomic energy. Hydro-electric energy generated from large dams is also a form of conventional energy. Energy generated through other means was
treated as non-conventional energy for the purpose of this survey. A village was categorised as having non-conventional energy if such energy was accessible and available for use to the majority of the villagers. The forms of non-conventional energy considered were bio-gas, solar energy, wind energy, any combination of these three energies, and other forms. Bio-gas was considered available when a bio-gas plant existed and supplied the villagers with gas for cooking, lighting, etc. Similarly, solar/ wind energy was considered available when this was provided for street lights, water pumps, household lighting, etc.

Pre question

Is non-conventional energy available ?

Literal question

Type of non-conventional energy available in the village

Interviewer instructions

non-conventional energy codes
(bio-gas – 1, solar energy – 2, wind energy – 3, any combination of codes 1 to 3 – 4, others – 9;
none – 5)

Community TV centre (Bl3_q3)
File: Village_facility

Overview	
Type: Discrete	Valid cases: 4646
Format: character	Invalid: 0
Width: 1	

Description

Community TV centre: By Community TV Centre was meant a place accessible to the
villagers where facility of viewing TV programmes was available. Such a centre is generally
located at a fixed place. If, at such a centre, it was found that the community TV set was permanently out of order or a TV set was not used for lack of electricity for years together, then the village was not considered to be having a community TV centre.

Literal question

Whether community TV centre is there in the village

Interviewer instructions

Write (yes - 1, no - 2)

Cable TV connection (Bl3_q4)
File: Village_facility

Overview	
Type: Discrete	Valid cases: 4643
Format: character	Invalid: 0
Width: 1	

Description

Cable TV connection (Bl3_q4)
File: Village_facility

Cable TV: Cable TV means multiple connectivity of TV channels which are generally
not accessible through the national TV antenna. At many places one or more operators with a
dish capable of receiving satellite signals distribute the line to interested households on
payment of a fee. This line is called a cable TV connection. If there was a cable TV
connection in the village and if any interested household could take it, then the village was
considered as having this facility. If, however, a cooperative society (say) had provided the cable TV connection only to its
members, then the village was not considered as having this facility.

Literal question

whether cable TV connection available?

Interviewer instructions

(yes – 1, no – 2)

Major source of drinking water (Bl3_q5)
File: Village_facility

Overview

Type: Discrete   Valid cases: 4645
Format: character   Invalid: 0
Width: 1

Description

Villages were categorised according to the major source of drinking water used: tap, tube-well/hand pump, well, tank/pond
(reserved for drinking), other tank/pond, river/canal/lake, spring and others. The source used by a majority of households
for the major part of the last 365 days was considered

Pre question

major source of drinking water

Literal question

What is the source of drinking water <

Interviewer instructions

major source of drinking water
(tap – 1, tube well / hand pump – 2, well – 3, tank / pond (reserved for drinking) – 4, other tank / pond – 5, river / canal / lake
– 6, spring – 7, others – 9)

Type of drainage system (Bl3_q6)
File: Village_facility

Overview

Type: Discrete   Valid cases: 4645
Format: character   Invalid: 0
Width: 1

Description

Drainage system: The drainage system of a village is understood as the system, if any, for carrying off waste water and
liquid wastes of the major part of the village.

Pre question

Type of drainage system available for the major part of the village

Literal question

What type of drainage system for the major part of the village available like underground , covered pucca, open pucca,
open katcha; or no drainage

Interviewer instructions

(underground – 1, covered pucca –2, open pucca – 3, open katcha – 4; no drainage – 5)

main source of irrigation

Literal question

What is the main source of irrigation ?

Interviewer instructions

Codes to be filled for
(canal - 1, tube well - 2, stream / river - 3, tank / pond - 4, well - 5, others - 9;
no irrigation facility- 6)

Co-operative society (Bl3_q8)
File: Village_facility

Overview	
Type: Discrete	**Valid cases:** 4645
Format: character	**Invalid:** 0
Width: 1	

Description

Cooperative Society: A cooperative society is a society that is formed through the cooperation of a number of persons (viz. the members of the society) for the benefit of the members. The funds of the society come from members' contributions/ investments and the profits are shared by the members. For the purposes of this survey, if there was a co-operative society run by more than one village of which the residents of the sample village could become members, then the sample village was considered to have a co-operative society.

Literal question

whether having any co-operative society (Yes or No)

Self-help group (Bl3_q9)
File: Village_facility

Overview	
Type: Discrete	**Valid cases:** 4638
Format: character	**Invalid:** 0
Width: 1	

Description

Self-help Group: A Self-help Group (SHG) is a voluntary association of people who share a common problem, condition or history. By coming together, members share support and ideas on how to plan and live a more productive and fulfilling life. Groups are usually free of charge, on-going and open to new members. These groups are formed, at the local level, mostly by under-privileged persons with the idea of developing financial stability and money management capacity through internal loaning of their own savings. SHGs also play
an important role in the health care system. In self- help groups, people take care of each other and of themselves. For the purposes of this survey, an SHG which was registered as a cooperative society was treated as a cooperative society and not an SHG.

Literal question

whether having any self-help group? (Yes or No)

Drinking water (Bl3_q10)

Vocational training centre (Bl4_q34)
File: Village_facility

Overview	
Type: Discrete	Valid cases: 4637
Format: character	Invalid: 0
Width: 1	

Description

Vocational Training Centre : A vocational training centre offers training in different engineering and non-engineering trades to the handicapped. These centres offer special facilities for training the handicapped and issue certificates that help them get jobs based on their training. The trainees appear for an examination which makes them eligible for the Industrial Training Institute (ITI) certificate or its equivalent. A vocational training centre is run by the Government or by private organizations. These centres have special facilities for training the handicapped and are equipped with special teachers, instructors, psychologists and rehabilitation officers.
